ITHACA GUN CO.

Ithaca, New York

This material was supplied by Walter C. Snyder and is copyrighted in his name. Used with the author's permission.

The Ithaca Gun Company was founded by William Henry Baker, John VanNatta, and Dwight McIntyre. Gun production started during the latter half of 1883 at an industrial site located on Fall Creek, Ithaca, New York. Leroy Smith joined the company by 1885 and George Livermore joined the firm in 1887. By 1894 the company was under the exclusive control of Leroy Smith and George Livermore. Many of the company's assets were purchased by the Ithaca Acquisition Corporation in 1987 and moved to King Ferry, New York, where it operated until May, 1996. Now dba Ithaca Guns USA LLC of Upper Sandusky, Ohio.

HAMMER MODELS

Ithaca Baker Model

The first model produced by the company was designed by W.H. Baker and was manufactured from 1883 through 1887. It was offered in six grades; Quality A ($35) through Quality F ($200) in either 10 or 12 gauge. All Ithaca-produced Baker models had exposed hammers. Grades above Quality B are seldom encountered and an expert appraisal is recommended.

New Ithaca Gun

The New Ithaca Gun was introduced in 1888 and discontinued during 1915. Like its predecessor, it was introduced in the same seven grades, Quality A through Quality F. Later, the Quality F was discontinued. By 1900, a "condensed steel" barreled model, named Quality X, was introduced. The New Ithaca Gun was produced in gauges 10, 12, and 16, and very rarely, 20. Lower grade models carried the logo, "New Ithaca Gun," usually within a banner, on each side of the frame. Like its predecessor, grades above Quality B are seldom encountered, and an expert appraisal is recommended. Sixteen gauge guns command a 30 percent price premium. The extremely rare 20 gauge model requires an expert appraisal.

NOTE: Sixteen gauge guns command a 30 percent premium. The extremely rare 20 gauge model requires an expert appraisal.

The "New Double Bolted Hammer Gun"

During 1915, the Ithaca Gun Company replaced the New Ithaca Gun with a model it referred to as "our new model two bolt hammer gun." The new hammer gun had coil springs powering the external hammers. The "two bolt" lock up was accomplished by a bottom bolt and by the top lever engagement with the rear nub of the rib extension. Lower grade models were marked on both sides of the frame with a setter dog and the logo, "Ithaca Gun Co." The 1915 catalog is the last year hammer guns were advertised but the old records indicate a few were sold as late as 1919.

Grades offered were X, A, AA, B, C, D, and E. The 1915 catalogue advertised a price of $29 for an A Quality model and $150 for the elaborately engraved Quality E. All grades were available in 10, 12, and 16 gauges. Like the New Ithaca Gun, grades above Quality B are seldom encountered, and an expert appraisal is recommended. Sixteen gauge guns command a 30 percent price premium. The extremely rare 20 gauge model requires an expert appraisal.

HAMMERLESS MODELS

The first hammerless Ithaca gun was introduced in 1888. All Ithaca double guns were discontinued in 1948.

The gauge and grade can usually be found on the left front corner of the water table of the frame, the serial number is usually found on the right side of the same water table, on the barrel flats, and on the forend iron.

Crass Model

The Crass Model, named after Ithaca's Frederick Crass who designed it, was introduced in 1888. It was offered in Quality 1 through Quality 7. The Quality 1P, a model with no engraving, was introduced in 1898. The Crass Model underwent three major frame redesigns before it was discontinued during 1901. The gun was available in 10, 12, and 16 gauge. Automatic ejectors were introduced in 1893 and were available in any quality gun at extra cost.

NOTE: Sixteen gauge guns will command a 20 percent price premium. Guns above Quality 4 are seldom encountered, and an expert appraisal is necessary. For automatic ejectors add $250. The serial number range for the Crass Model is approximately 7000 to 50000.

Lewis Model

Chester Lewis, an Ithaca Gun employee, was credited with the design of the gun that now bears his name. The gun was bolted through the rib extension in addition to the traditional under bolt. The model was available from 1901 through 1906, and was offered in Qualities 1 through 7. It was made in 10, 12, and 16 gauge, and after 1906, 20 gauge. Automatic ejectors were offered at added cost.

Qualities offered: 1, 1 Special, 1-1/2, 2, 3, 4, 5, 6, 7. The 1 Special had Nitro Steel barrels.

NOTE: Automatic ejectors add about $250 to grades below Quality 4. The serial number range for the Lewis Model is approximately 55000 to 123600.

Minier Model

The Minier Model, named after Ithaca's David Minier, was introduced in 1906 and was available through 1908. It was offered in Qualities Field through 7 and any grade could be ordered with ejectors. The Minier Model was the first Ithaca gun to use coil springs to power the internal hammers. This model was triple bolted, e.g., two fastenings at the rib extension and the under bolt. Gauges 10, 12, 16, and 20 were offered.

Grades offered: Field, 1, 1 Special, 1-1/2, 2, 3, 4, 5, 6, 7.

NOTE: Automatic ejectors add $250 to guns below Quality 4. The serial number range for the Minier Model is approximately 130000 to 151000.

Flues Model

The Flues Model Ithaca gun was built on a three-piece lock mechanism invented and patented by Emil Flues. Introduced in 1908, it remained in production through 1926 when it was replaced by the Ithaca New Double. It was offered in gauges 10, 12, 16, 20, and 28, and enjoyed the longest production life of any Ithaca double gun. Several grades were offered beginning with the Field grade and ending with the Sousa Special. The Flues Model had the same bolting system as used on the Minier Model. Any grade could have been ordered with automatic ejectors at extra cost. A single-selective trigger made by the Infallible Trigger company was offered after 1914 and was the first single trigger offered from the company.

Qualities offered were: Field, 1, 1 Special, 1-1/2, 2, 3, 4, 5, 6, 7, and Sousa.

NOTE: Add $200 for factory-ordered single trigger, add $200 for automatic ejectors on grades lower than Grade 4. Small gauges command a price premium. A 20 gauge gun may command up to a 50 percent price premium; a 28 gauge field grade perhaps as much as 200 percent. The serial number range for the Flues is approximately 175000 to 399000. Expert appraisals are recommended on higher-grade, small-gauge models as they are seldom encountered.

The New Ithaca Double

The New Ithaca Double, commonly referred to as the NID, was manufactured from 1926 to 1948. It has the distinction of being the last double gun manufactured by the factory. The NID was bolted by a single rotary top bolt and was considered of all Ithaca double guns manufactured up to that time. External cocking indicators were standard on all NID models until about 1934, when they were eliminated from the design. Selective and non-selective single triggers and automatic ejectors were optional at additional costs. A special variation of the NID was introduced in 1932 to accommodate 10 gauge 3-1/2" magnum ammunition and was named, appropriately, the Magnum 10. All NID were available in grades Field, 1, 2, 3, 4, 5, 7, and Sousa (renamed the $1,000 grade after 1936). Gauges Magnum 10, standard 10, 12, 16, 20, 28, and .410 bore were offered.

NOTE: Like most collectible double guns, the smaller gauges command a price premium over the 12 gauge model. A 16 gauge field grade may command a 25 percent price premium, a 20 gauge field grade may command up to a 50 percent price premium, and the 28 gauge, and .410 caliber field-grade models perhaps as much as 250-300 percent. It is recommended that an expert opinion be sought for the valuation of high-grade, small-gauge models. Of late, the Magnum 10 gauge model also commands a price premium. Few of these guns trade, and the advice of an expert appraiser is suggested.

Non-selective single trigger add $150. Single-selective trigger add $250. Ventilated rib add $300. Automatic ejectors for grade below Grade 4 add $300. Beavertail forearm add $200. Monte Carlo buttstock add $300.

THE NEW ITHACA DOUBLE (MODERN-1999)

Reborn in 1999 under the company name Ithaca Classic Doubles of Victor, New York, the reintroduction of the NID will begin with serial number 470000. The last recorded production number from the Ithaca factory for NID was 469999. Only about 50 guns will be produced per year.

Special Field Grade

This side-by-side double is offered in 16, 20, 28, and .410 bore with a choice of matted rib barrel lengths of 26", 28", or 30". Ivory bead front sight. The action is case colored with light line border engraving. The stock is feather crotch black walnut with 22 lpi checkering. Choice of pistol or straight grip. Double trigger is standard. Weight in 20 gauge is about 5 lbs. 14 oz. 28 gauge is about 5 lbs. 8 oz., and .410 bore weighs about 5 lbs. 5 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Grade 4E

This model is also available in 16, 20, 28, and .410 with 26", 28", and 30" barrels. This model has gold plated triggers jeweled barrel flats and hand tuned locks. Black walnut stock has 28 lpi checkering with a fleur-de-lis pattern. Pistol or straight grip stock. Action is hand engraved with three game scenes and bank note scroll. Case colored frame.

NIB	Exc.	V.G.	Good	Fair	Poor

LEFEVER ARMS COMPANY, INC.

During 1921, Ithaca Gun, under the name "The Lefever Arms Company, Inc." introduced a line of lower-cost, boxlock guns. See the Lefever Arms Company section of this book for prices concerning those guns.

WESTERN ARMS CORPORATION

During 1929 the Ithaca Gun Company created the Western Arms Corporation, which introduced a new, low-cost double gun. That new double gun was named The Long Range Double and it was produced in 12, 16, and 20 gauges, and .410 caliber. Twenty gauge guns often command a 20 percent premium, a .410 caliber can command up to a 250 percent premium. This model was last made at the start of World War II.

The Long Range Double

The Long Range Double had walnut stocks that were not checkered.

Exc.	V.G.	Good	Fair	Poor
550	450	200	150	N/A

NOTE: Single trigger guns will add $100 and automatic ejectors will add $200.

The Long Range Double Deluxe

Usually made exclusively for the Montgomery Ward Company and sold by them under the name, Western Field Deluxe. This model had a line checkering pattern at the grip and on the splinter forend. Many of the Ithaca produced Western Field Deluxe guns had automatic ejectors and that fact was stamped into the right barrel.

Exc.	V.G.	Good	Fair	Poor

NOTE: Single triggers add $100. Automatic ejectors add $200.

ITHACA SINGLE-BARREL TRAP GUNS

The Ithaca Gun Company introduced a single-barrel trap gun in 1914. This gun was based upon the Emil Flues three piece lock design used for the double gun and has become known as the Flues Model Single-Barrel Trap. The Flues Model was discontinued during 1922 and was replaced that year by a model designed by Ithaca's Frank Knickerbocker, commonly referred to as the "Knick." The Knick Model was discontinued in 1988, shortly after the Ithaca Acquisition Corp. purchased the assets of the Ithaca Gun Company. For many years, The Ithaca Single-Barrel Trap Gun was the gun of choice for many champion shooters.

Flues Model Single-Barrel Trap Gun (1914 to 1922)

The Flues Model trap gun was introduced in 1914 and offered in Grades 4, 5, 6, and 7. A lower cost Victory grade was introduced in 1919 and the highest cost variety, the Sousa Special

THE INIMITABLE MR. SOUSA

BY DAN SHIDELER

American bandmaster, composer and sportsman John Philip Sousa.

It's not unusual for musicians to have an avid interest in firearms. Country superstar Toby Keith, for example, is a shooter. In fact, my friend Richard Clauss, a gunsmith about whom I've written in *Gun Digest Magazine*, did an emergency engraving job on a Winchester .30-30 that was presented to Keith as a birthday gift last year during an Indiana concert appearance.

I think we'd all agree that Toby Keith is pretty famous, to put it mildly. Yet the most famous shooter/musician of all time is remembered today by only a handful of gun owners, and that's a pity. For that man, John Philip Sousa, had a tremendous influence on public acceptance of the shooting sports.

One hundred years ago, John Philip Sousa was not only the most famous musician in the world – he was the most famous American in the world. In a day when there were no radio, no television, no movies to speak of, you couldn't walk 100 yards down the street without hearing a Victrola, a player piano, or a town band playing one of Sousa's great marches. For over 30 years, the world-famous Sousa Band played to standing-room-only crowds all over the world. Soldiers in the Spanish-American War and both World Wars marched off to the strains of *The Stars and Stripes Forever*, one of the most famous compositions ever written. One 19th-century African explorer has even written that, while lost in the bush, he knew he was approaching some sort of civilization when he heard Sousa's *Washington Post March* being played on a missionary's pump organ.

Any discussion of Sousa has to start with *The Stars and Stripes Forever*. That one Sousa march is the musical equivalent of the Declaration of Independence, the Bill of Rights and the Gettysburg address, all rolled into one. Confession time: even today, something happens to me when I hear a band crash out the first four bars of *The Stars and Stripes Forever*. My throat tightens up and my eyes go all funny for a second. And when the trombones sing out that brilliant counterpoint in the last iteration of the trio, brother, that's it for me. Sometimes I think America would be in much better shape if it had a little more Sousa in it.

Call me a sentimentalist. Guilty as charged. Yet I'll maintain until my dying day that John Philip Sousa said more about America and Americans in *The Stars and Stripes Forever* than all the political philosophers put together ever have. Lee Greenwood is great, no doubt about it, but give me John Philip Sousa any day.

But it gets even better. Sousa was a gun guy. In fact, he founded the first American trapshooting organization, the forerunner to today's Amateur Trapshooting Association. Sousa was a better than average trapshooter, consistently shooting in the high 90s in virtually every competition he entered. That's not bad for a man who didn't begin trapshooting until 1906, when he was 62 years old. He also owned shooting preserves near Pinehurst, North Carolina, and Georgetown, South Carolina.

Sousa enjoyed upland bird shooting, but his heart always lay with trapshooting. In one of his many articles on the sport, he said, "Let me say that just about the sweetest music to me is when I call 'pull,' the old gun barks, and the referee in perfect key announces, 'dead'."

Sousa was also a celebrity endorser for Daisy Air Rifles.

Sousa was inducted into the National Trapshooting Hall of Fame in 1985, 53 years after his death. According to Sousa's biography at the Hall of Fame's website (www.traphof.org), the celebrated bandmaster was no slouch: "While Sousa contended that he participated in his favorite sport purely for relaxation, he was no less proud of his winning scores. In 1910 at the Southern Preliminary Handicap in Columbus, Ga., Sousa scored 95x100 in a field of 200 competitors, numbering in the top three. Later in the year his score of 78x80 led a Vermont State main event. In July 1913 he won the Berlin Handicap at Ocean City, Md. with 94x100 at 18 yards. At Pinehurst, N.C., one of his favorite clubs, Sousa was the mainstay of the Navy team in an Army versus Navy contest in 1919. His individual score was tops for the Navy's competing trio." It might be noted that Sousa was 65 years old when he competed in the Army-Navy shoot.

Some of Sousa's fans didn't expect such a man to be involved in the shooting sports, and Sousa occasionally sparred with Victorian versions of today's animal rights fanatics. As Sousa relates in his 1928 autobiography *Marching Along*, he once received a letter from a concerned clergyman after a Sousa article on clay pigeon shooting was published in the *London Sketch*:

"My Dear Sir [the letter began]:

I read your article on pigeon shooting, and I am horrified at the thought that you, a musician, a member of a profession giving to the world the sweetest tones of nature, should stoop so low as to shoot God's beautiful creatures. Repent, sir, ere it is too late. Give up your murderous practice of killing the beautiful feathered denizens of the fields, I beseech you."

Sousa then busted up half a dozen clay pigeons and sent them to the offended clergyman along with the following note:

"Reverend Sir:

Your letter received and noted. Before I received it I went out and in my sinful way bagged the enclosed pigeons. I am sorry I didn't hear from you earlier,

but I enclose the pigeons as evidence of my accuracy as a shot. Please have them broiled and let me know how they taste."

Sousa promoted the shooting sports so effectively that in 1916, the Ithaca Gun Company named its highest grade of shotgun the "Sousa Grade." Sousa was also a featured endorser of Daisy Air Rifles and DuPont Powder. He was the best friend the shooting sports ever had, not only because he so perfectly embodied the gentleman sportsman but also because he was one of the best-known celebrities in the world.

Sousa was born in Washington, D.C., on November 6, 1854. His father was a trombone player in the Marine Corps Band ("The President's Own"), and young Sousa joined that same band as an apprentice at the age of 13 and stayed with it for seven years. Sousa was primarily a violinist, but during his apprenticeship with the Marine Band he learned to play all the wind instruments, no small feat in itself.

Sousa left the Marine Band around 1871 and hit the road in a series of engagements as violinist and conductor of a number of small theatrical orchestras. After years of dead-end gigs in dead-end towns, Sousa returned to the Marine Band as its conductor in 1880 with the rank of Sergeant Major. Sousa wrote several marches during his first few years as conductor of the Marine Band, but he really hit the big time in 1886 with a peppy little march called *The Gladiator.* Sousa himself wrote that in a Sunday stroll down a Washington boulevard, he heard *The Gladiator* being played on half a dozen parlor pianos and by a street organ grinder. In those pre-radio and pre-IPod days, that was about as good as it got.

In 1888 Sousa wrote the march that is still fondly remembered by anyone who's ever served in the Corps: *Semper Fidelis*. This march is one of only three compositions that have ever been officially recognized by the U. S. government. The second is *The Star Spangled Banner,* which was officially recognized as our national anthem in 1931. The third? *It's The Stars and Stripes Forever*, of course, which in 2006 was officially named America's national march by Congress through the passage of United States Code 36, Subtitle I, Part A, Chapter 3, Article 304.

After the success of *Semper Fidelis*, Sousa was lured away from the Marine Corps and enticed to form his own touring band: the world-famous Sousa Band. It was the biggest musical draw of its day and played to packed houses literally around the world until Sousa's death in 1932.

As a private citizen, Sousa continued writing marches that constituted virtually the entire Top 40 of late Victorian America: *The Liberty Bell, The Thunderer, Washington Post, Manhattan Beach* and three score more. And then, on December 25 in 1896, he gave the American people a Christmas gift that would keep on giving forever: *The Stars and Stripes Forever*. Along with "Ta-Ra-Ra-Boom-De-Ay," *The Stars and Stripes Forever* became the theme song of the Spanish-American War. Sousa himself attempted to re-up in the Marines to serve in the war but was felled by an attack of what was apparently malaria.

Sousa's 132 marches, numerous operettas and phenomenally popular tours made him a wealthy man. In 1918, at the age of 61, he enlisted in the U. S. Naval Reserve at a salary of $1 a year, donating the remainder of his pay to the Sailors' and Marine's Relief Fund. He was put in charge of training the Navy's military bandsmen at the Great Lakes Naval Station in Chicago in 1918. (When I was younger, I had the privilege of knowing an elderly trumpet player who had actually trained under Sousa at the Great Lakes Naval Station. So great did he consider this honor that even 70 years later, his eyes teared up as he told me about it.)

One of the most persistent rumors about John Philip Sousa was that he was actually a Greek (or Italian, or Portuguese) immigrant named John Philipso or John Philip So. The story goes that when the young John Philip So boarded the steamship for his voyage to America, the ticket agent slapped a label reading "USA" over the nameplate on his luggage, and the officials at Ellis Island subsequently misread it as "John Philip SoUSA." I have heard this story repeated by a number of people (and in a mailing from the United States Chamber of Commerce) but there's absolutely nothing to it. The "John Philip So" story was dreamed up by Sousa's publicity agent, Col. George Frederick Hinton, and Sousa once refuted it in print in an article cleverly titled "In Other Words, It Just Isn't So."

In his later years, Sousa came to resemble the kindly old grandfather most of us wish we had. He was on the short side, about 5' 7", and spoke in a high-pitched voice with a slight southern accent. He shaved off his famous pirate's beard when he joined the Naval Reserve in WWI, saying he did it to intimidate the Kaiser. Sousa died at age 77 on March 6, 1932, after rehearsing with the Ringgold Band of Reading, Pennsylvania. Fittingly, the last composition he ever conducted was *The Stars and Stripes Forever*. He is buried in Congressional Cemetery in Washington, D.C. The first several bars of the melody of *The Stars and Stripes Forever* are carved into his monument.

Sousa's music had admirers all over the world, including Charlie Chaplin and the not-quite-so-comical Adolf Hitler. During an informal reception in Germany in the 1930s, when someone played a recording of Sousa's *Washington Post March* on the victrola, Hitler turned to one of his aides and plaintively asked, "Why can't we have marches like that?"

Sousa's shooting legacy lives on in the form of the American Trapshooting Association, the basic structure of which was designed when Sousa was president of the American Amateur Trapshooting Association in 1916. And of course we mustn't forget the New Ithaca Double Sousa Grade shotgun, a collectible arm of such supreme rarity and elegance that most of us can only dream of owning one.

I saw a genuine Sousa Grade New Ithaca Double advertised for sale about 15 years ago, and the price was a cool $10,000. I suppose values are a good deal higher than that now. As Steve Comus wrote in a January, 2005, issue of *Guns & Ammo*, the Sousa Grade was the finest gun offered by Ithaca: "In addition to the Field Grade," Comus writes, "there were, in ascending order of price and degree of 'fancy,' Grades 1, 2, 3, 4E, 5E, 7E, $2,000 Grade, prewar $1,000 Grade and Sousa Grade (the bandleader actually assisted in the development of this model, of which there were only 11 ever made, including one in .410 bore)."

Ithaca also manufactured a number of Sousa-grade single-barrel trap guns, and these too are quite scarce. And expensive. For example, auctioneer James D. Julia (www.jamesdjulia.net) successfully auctioned a Sousa Grade Knick Model Single Barrel Trap Gun for $31,050 in 2007. That's almost enough to make you check the downstairs closet to see if you don't have one hiding there.

As far as I know, Ithaca's Sousa Grade shotguns don't say "Sousa" anywhere on them. One writer, though, has said it's easy to tell a Sousa Grade: "Every square inch is covered with engraving." If someone offers you a Sousa Grade Ithaca for sale, my advice is to have it appraised by an expert before reaching for your checkbook.

The next time you hear *The Stars and Stripes Forever*, think for a moment of the man behind the march. It's unfortunate that his musical achievements have so completely eclipsed his contributions to the shooting sports, for Sousa was a true friend to American hunters and shooters. After all, you've just got to admire the man who wrote the following in the August 15, 1916, issue of *American Shooter*:

"A horse, a dog, a gun and a girl. That is my idea of heaven!"

Closeup of receiver of Sousa-grade Ithaca Knick Model Single Barrel Trap Gun, courtesy of James D. Julia Auctions.

was introduced in 1918. All Flues model trap guns were made within the same serial number sequence as the double guns but do have the letter "T" for Trap following the serial number. All Flues Models with the exception of the Victory Grade were produced with an automatic ejector. A rubber anti-recoil pad was an option. Guns having a pre-1916 engraving pattern will command the highest prices.

Knick Model Single-Barrel Trap

The Knick Model trap gun was introduced during 1922 and was based on a design credited to Frank Knickerbocker. The design was simple and very serviceable, had been in continues production until 1988 when it was discontinued. The model was available in Victory, 4, 5, 7, and Sousa Special Grades. The Sousa was replaced by the $1,000 Grade in about 1936, which was replaced by the $2,000 Grade by 1952, the $2,500 Grade by 1960, the $3,000 Grade by 1965, the $5,000 Grade by 1974, and finally, the Dollar Grade in the early 1980s as the cost of production increased. All Knick models were produced with an automatic ejector and a rubber anti-recoil pad.

ITHACA AUTO & BURGLAR GUN NFA, CURIO OR RELIC

The Ithaca Auto & Burglar Gun is a double-barreled 20 gauge smooth bore pistol manufactured by Ithaca Gun Company, Ithaca, New York, from 1922 to 1934. Total production was approximately 4,500. They were made by modifying Ithaca's standard field grade double-barrel shotgun by shortening the barrels and fitting the receiver with a pistol grip. Standard factory guns had blued 10" barrels, case hardened receivers with the legend **Auto & Burglar Gun/ Ithaca Gun Co./Ithaca, New York**, and the figure of a pointing dog stamped on each side. The barrel length on 21 guns inspected varied to 10.25" (typically in increments divisible by .125"), apparently from inexact factory quality control. Ithaca set a $37.50 retail price when the gun was in production, but some dealers sold it for $40 or more. Production was halted when the government ruled the Ithaca Auto & Burglar Gun to be a "firearm" in the "any other weapon" category under the National Firearms Act (NFA) of 1934.

There are two variations, termed Model A and Model B. Model A utilizes the so-called Flues frame (named after Emil Flues, who designed it in 1908), and its distinctive grip has a curving butt and a large spur. Model A is designed for 2.5" shells, and is not considered safe to fire using modern ammunition. Approximately 2,500 Model A Auto & Burglar Guns were manufactured from 1922 to 1925, when the Flues model was discontinued.

Model B utilizes the so-called N.I.D. frame (short for New Ithaca Double), introduced in 1926 and discontinued in 1948. The N.I.D. is designed for modern ammunition and 2.75" shells, has cocking indicators, and a different pistol grip that is perpendicular to the barrel and which lacks the distinctive spur. Some Model Bs have been observed with rosettes or "stars" engraved in each side of the receiver; their significance is unknown at this time, but they probably are decorations. Approximately 2,000 Model B Auto & Burglar Guns were manufactured from 1926 to 1934.

Model A

Serial numbered from 343336 to 398365

Exc.	V.G.	Good	Fair	Poor
1500	1,000	900	750	550

Model B

Serial numbered from 425000 to 464699

Exc.	V.G.	Good	Fair	Poor
1300	950	750	550	450

NOTE: Nonstandard or special order guns command premiums of 100 percent or more. Original holsters (marked Auto and Burglar Gun/MADE BY/ITHACA GUN CO./ITHACA, N.Y.) are extremely rare and worth $300 to $500 or more.

ITHACA MODEL 37 REPEATER

The Ithaca Model 37 Repeater was introduced in 1937 in 12 gauge, 1938 in 16 gauge, and in 1939 in 20 gauge. It underwent very few design changes throughout its long life which ended 1987 when the Ithaca Acquisition Corp. acquired the assets of the Ithaca Gun Company during 1987 and renamed the gun the Model 87. The name has recently been changed again to the M37 after the assets of the Ithaca Acquisition Corp. were purchased in May of 1996 by the Ithaca Gun Company, LLC. All Model 37 guns were chambered only for 2-3/4" ammunition until 1983, when the Magnum with 3" chamber was introduced to some configurations. Most Model 37 guns had blued metal and walnut stocks with the exception of the Model 37 Field Grade series which had matte finished metal and Birch stocks. Sixteen gauge guns were discontinued in 1973. Ithaca Gun closed in April, 2005, but reopened in 2006 as Ithaca Guns USA of Upper Sandusky, Ohio.

NOTE: Twenty gauge guns made before 1968 will generally command a price premium.

Model 37/Standard Grade—1937-1983

Guns made before 1968 will enjoy a 15 percent price premium; those made before World War II, a 30 percent price premium.

HI-GRADE ITHACA MODEL 37 GUNS

The Ithaca Gun company offered custom engraving services either from its in-house engraver, one of which was retained until about 1972, or through an outside contract engraver who was usually William Mains. Many customers requested some degree of custom work and guns with various patterns turn up from time to time. There were four standard engraving patterns offered to customers, Grade 1, Grade 2, Grade 3, and the very elaborate $1,000 Grade pattern. Increasing production costs forced the $1,000 Grade to become the $2,000 Grade, the $2,500, and finally the $3,000 Grade over the years.

NOTE: All factory engraved Model 37 guns are rare and require an expert appraiser to determine an accurate value.

$1,000 Grade

The Model 37 with an engraved receiver, gold inlays, and a well-figured walnut stock. Manufactured between 1940 and 1942.

Model 37 Law Enforcement Weapons

The Ithaca Gun Company entered the law enforcement market in 1962 when it introduced the Model 37 Military and Police (M&P) and the Model 37DS Police special (DSPS). The M&P Model was styled after the riot guns made for various military contracts. The DSPS was styled after the Ithaca Deerslayer. Both models were offered with 8-shot capacity after 1968. A chrome finish was an available option after 1976. Both models usually had ring turned slide handles. Only those models available to the general public, i.e. barrel lengths of 18" or longer, are listed.

Model 37 Military and Police (M&P)—1962-1986

NIB	Exc.	V.G.	Good	Fair	Poor
450	300	250	200	125	75

NOTE: Add 20 percent for an 8-shot model in NIB or EXC. condition, and add an additional 15 percent for chrome plated models in similar condition.

Model 37 DS Police Special—1962-1986

NIB	Exc.	V.G.	Good	Fair	Poor
475	350	250	200	125	75

NOTE: Add 20 percent for an 8-shot model in NIB or EXC. condition, and add an additional 15 percent for chrome plated models in similar condition.

ITHACA MODEL 87 REPEATER

During 1987 many of the assets of the bankrupt Ithaca Gun Company were purchased by the Ithaca Acquisition Corporation. Manufacture of the Model 37 was resumed that summer after the gun was renamed the Model 87. Many of the Models offered by the old company were continued. All Model 87 field guns were produced with ventilated ribs. All Deerslayer models continued the rifle sights used on the Model 37 guns.

Model 87 Basic—1989-1994

Early models had birch stocks, later production had walnut stocks. All had ring turned slide handles.

NIB	Exc.	V.G.	Good	Fair	Poor
350	300	250	175	125	75

Model 87 Magnum

A 12 or 20 gauge Magnum slide action shotgun with a 25" barrel fitted with screw-in choke tubes and a ventilated rib that is similar to the Model 37. Blued with a walnut stock.

NIB	Exc.	V.G.	Good	Fair	Poor
400	350	300	225	150	100

The Model 87 was manufactured in the styles listed as of 1989:

Model 87 Field Grade—1987-1990

Stocks were walnut with pressed checkering.

400	350	250	200	125	75

Model 87 Deerslayer II—1988-1996

This model had a fixed rifle barrel and a Monte Carlo buttstock. A small number of guns were specially made with a fast twist barrel to handle Brenneke ammunition and are marked "BRENNEKE" on the receiver.

Courtesy C. Hadley Smith

NIB	Exc.	V.G.	Good	Fair	Poor
550	450	350	200	125	75

NOTE: Brenneke-marked guns will command a 30 percent price premium.

Model 87 Home Protection and Law Enforcement Models

The Ithaca Acquisition Corporation continued production of many of the law enforcement firearms produced by the Ithaca

Gun Company. Only those models available to the general public are listed.

Model 87 Military & Police—1987-1996

Generally produced with a non-checkered walnut buttstock and a ring turned slide handle, both of which were oil finished. Add 20 percent for an 8-shot model in NIB or excellent condition.

NIB	Exc.	V.G.	Good	Fair	Poor
350	300	250	200	125	75

NOTE: Add an additional 15 percent for chrome plated models in similar condition.

Model 87 DS Police Special—1987-1996

Produced with either a pressed checkered or a non-checkered walnut buttstock, and a ring-turned slide handle, both lacquer finished. The metal was usually finished with a commercial polished blue but a chrome-plated finish was also available.

NIB	Exc.	V.G.	Good	Fair	Poor
400	350	250	200	125	75

NOTE: Add 20 percent for an 8-shot model in NIB or excellent condition, and add an additional 15 percent for a chrome plated models in similar condition.

NEW MODEL 37

During 1996, the assets of the bankrupt Ithaca Acquisition Corporation were purchased by a new company named the Ithaca Gun Company, LLC. One of the first public actions of the new firm was to rename the Model 87 the Model 37, before resuming production later that year, the serial number of the new Model 37 is prefaced with the letter "M." A used market for the new Model 37 has not been established at this time. Suggested retail prices for each model currently produced are listed.

In 2001 a Legacy Edition upgrade featuring a laser carved handwritten message in the stock was available for an additional $125.

Model 37 Deerslayer II

This model is offered in both 12 and 20 gauge. Fitted with either 20" or 25" barrels with rifled bores. These barrel are fixed to the receiver. Magazine capacity is 5 rounds. Walnut stock. Weight is approximately 7 lbs. In 2001 a 16 gauge version with fixed rifled barrel was offered.

NIB	Exc.	V.G.	Good	Fair	Poor
640	500	375	—	—	—

Smooth Bore Deluxe

Offered in 12, 16, or 20 gauge with interchangeable barrels in 20" or 25" with smoothbore for deer. Walnut stock. Magazine capacity is 5 rounds. Weight is approximately 6.75 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor

Mag-10 Series

A 10 gauge Magnum semi-automatic shotgun manufactured in a variety of barrel lengths, styles and finishes. Manufactured from 1975 to 1986 as listed.

NOTE: The market for Ithaca Mag-10s has declined somewhat with the success of the 3.5-inch 12-ga. load. This is apparently because most owners consider their Mag-10s as hunting weapons, not collectors' pieces. Nevertheless, NIB or Excellent+ examples still command fairly high prices, if the right buyer can be found.

JAPANESE STATE MILITARY WEAPONS

Japan

NOTE: For history, technical data, descriptions, and prices see the *Standard Catalog of Military Firearms* under Japan.

JEFFERY, W. J. & CO. LTD.

London, England

This company produced high quality shotguns and rifles. Their products have been used by wealthy sportsmen for many years. They produced guns under their own banner and also as contractors for other distributors. They made the guns sold by the Army & Navy Department Store in London. Guns of this type were basically custom-ordered and as such are extremely hard to evaluate on a general basis. We supply estimated values for standard models.

SHOTGUNS

SEE—British Double Guns

RIFLES

Single-Shot

Built on the Farquharson Falling Block action and was chambered for many calibers up to the .600 Nitro Express. This was also a custom-order gun, and the barrel length was optional. There are usually folding express sights, and the finish is usually blued with a select, hand-checkered walnut stock. These were high quality firearms, and the values would be determined, for the most part, by the options and embellishments on the particular specimen. Individual appraisal is definitely advised. The caliber in which a rifle is chambered will also have an effect on the value. Obsolete calibers bring less, and the larger express calibers bring more.

Exc.	V.G.	Good	Fair	Poor
4950	3700	2750	1750	900

Boxlock Double Rifle

A boxlock chambered for many different calibers. It can be found with either a top or underlever action and has folding express sights. The stock and forearm are select, hand-check-

ered walnut, and the finish is usually blue. This was a custom-order proposition, and values can be affected by many variables such as caliber, options, and embellishment. Damascus barreled hammerguns are worth approximately 50 percent less.

Exc.	V.G.	Good	Fair	Poor
8800	7250	4950	3850	2500

Sidelock Double Rifle

Has detachable sidelocks and otherwise is comparable to the boxlock version.

JENKS CARBINE

Manufacturer—N. P. Ames
Springfield, Massachusetts

Jenks "Mule Ear Carbine"

A .54 caliber percussion side hammer carbine with a 24.5" round barrel and full length stock secured by two barrel bands. The lock case hardened, the barrel browned and the furniture of brass. The lock marked "N.P.Ames/Springfield/Mass." The barrel stamped "Wm.Jenks/USN" followed by the inspector's initials. The buttstock carries an inspector's cartouche. Approximately 4,250 were made between 1841 and 1846. Some were marked "USR" for the "U.S. Revenue Cutter Service," and these would bring approximately an 80 percent premium over the values listed. However, prospective purchasers should secure a qualified appraisal prior to acquisition.

JOSLYN
Springfield, Massachusetts
Manufacturer—Springfield Armory

Joslyn Breechloading Rifle
The first mass-produced, true breechloading cartridge firearm manufactured in a national armory. The actions were supplied by the Joslyn Firearms Company, and the rifles were chambered for the .56-50 rimfire cartridge. This rifle has a 35.5" round barrel and a full-length stock that is held on by three barrel bands. The lock is marked "U.S./Springfield" with "1864" at

the back. The barrel is marked "B. F. Joslyn's Patent/ Oct. 8th, 1861 / June 24th, 1862." There were approximately 3,000 of these manufactured circa 1865. They were probably issued to Union forces, but it is unknown if they saw action before the end of the Civil War.

Exc.	V.G.	Good	Fair	Poor
—	5500	3495	1950	500

.50-70 Alteration

Approximately 1,600 Joslyn rifles were rechambered to fire the .50-70 centerfire cartridge. The conversion consisted of rechambering and drilling a new firing pin hole after the rimfire pin was sealed. There was no specific serial number range in which these conversions were done. Most of these weapons were eventually converted to smoothbores and sold in Africa. The original military specimens are extremely scarce.

Exc.	V.G.	Good	Fair	Poor

KIMBER MFG., INC.
Yonkers, New York

Kimber of Oregon was established in April 1979 by Greg and Jack Warne. The company produced high quality rimfire and centerfire rifles until going out of business in early 1991. Kimber produced approximately 60,000 rifles during its operation. In April 1993, Greg Warne opened Kimber of America in Clackamas, Oregon. This new company presently manufactures the same high-quality rifles built on an improved Model 82 Sporter action and stock, but in rimfire only. In 1995 the company expanded its product line to include centerfire rifles as well as a 1911 .45 ACP semi-automatic pistol line. In 1997 manufacturing operations were consolidated in the New York pistol factory and the two factories in Oregon were closed.

DISCONTINUED MODELS

KNICKERBOCKER

Made by Crescent Fire Arms Co.

Knickerbocker Pistol NFA

The Knickerbocker is a 14" double-barreled 20 gauge smooth bore pistol manufactured by Crescent Fire Arms Co. of Norwich, Connecticut. On the basis of its hammerless design and the dates of production of similarly designed firearms by Crescent, the Knickerbocker was probably manufactured sometime during the early 1900s. The receiver is case hardened, and the barrels are nickel-plated. The right side of the receiver is stamped **AMERICAN GUN CO./ NEW YORK U S A**; the left side is stamped **KNICKERBOCKER**. It probably was intended for law enforcement and/or defensive purposes, and manufactured using the same techniques used to produce the Ithaca Auto & Burglar Gun. The receiver is fitted with a checkered pistol grip resembling that of the Model 1 and Model 2 smooth bore H&R Handy-Gun. The only known specimen of the Knickerbocker bears serial number 200114. The Knickerbocker was classified as an "any other weapon" under the NFA in 1934 because it was originally designed as "a so-called shotgun with a pistol grip" and because it is concealable (see Treasury Department ruling S.T. 772, dated August 6, 1934). Its rarity precludes being able to reliably estimate its value at this time.

Double-Barrel Shotgun

Knickerbocker was a popular Dutch name for a New Yorker and was used as a brand on many hammerless sidelock doubles made by Crescent Firearms Co. Valued from $100 to $700 depending on model and condition,

KNIGHT RIFLES

Centerville, Iowa

This company was started in 1985 by Tony Knight. The company produces in-line blackpowder muzzleloading rifles and a complete line of accessories

Disc Magnum

Available in .50 caliber with a choice of blued or stainless steel 24"" or 26" barrel. Adjustable rear sight. Checkered stock with palm swell and rubber recoil pad. Stock also offered in black or camo. Adjustable trigger. Weight is approximately 8 lbs.

KRNKA, KAREL

Vienna, Austria

Karel Krnka was a talented firearms inventor born in 1858. He began his career in firearms design as a member of the Austro-Hungarian army. He made many improvements to their service rifle design. After he left the military, he took the job of head engineer with the ill-fated and short-lived "Gatling Gun Company." This company ceased operations in 1890, and then Krnka went to work for the patent office and remained there for a few years. In 1898 he became foreman of the Roth Cartridge Company and worked with Roth on firearms designs until the death of Roth in 1909. After this he became associated with the Hertenberger Cartridge Company; and finally in 1922 he moved to Czechoslovakia, where he became a firearms designer for the firm of C.Z. He remained at this post until his death in 1926. He recorded his first firearm patent in 1888 for a mechanical repeater with a ring trigger. His best known innovations are the internal butt magazine that is loaded by means of a stripper clip and the rotating locked bolt with internal firing pin. These designs were never actually turned into a mass-marketed pistol but were major contributions in the development of a practical semi-automatic pistol design.

KUFAHL, G. L.

Sommerda, Germany

Kufahl Needle-Fire Revolver

Designed and patented in Britain in 1852 by G.L. Kufahl, who tried unsuccessfully to interest a British company in producing it. He then went to the firm of Rheinmettal Dreyse, where a needle-fire gun was produced in 1838. This company manufactured his design. This revolver was chambered for a unique, totally consumed .30 caliber "cartridge." A lead projectile had the ignition percussion cap affixed to its base, with the propellant powder in the rear. The firing pin had to be long enough to penetrate the powder charge and hit the percussion cap. This does not sound efficient, but realize that these were the days before cartridges. This revolver has a 3.2" barrel and an unfluted cylinder that holds six shots. It is not bored all the way through but is loaded from the front. The finish is blued, with a modicum of simple engraving and checkered wood grips that protrude all the way over the trigger. The markings are "Fv.V. Dreyse Sommerda."

L

LAGRESE
Paris, France

Lagrese Revolver
A large ornate revolver chambered for the .43 rimfire cartridge. It has a 6.25" barrel and a 6-shot fluted cylinder. This revolver has no top strap; and the frame, as well as the grip straps, are cast in one piece with the barrel screwed into the frame. It is loaded through a gate and has double-action lockwork. The outstanding feature about this well-made revolver is its extremely ornate appearance. There are more sweeps and curves than could be imagined. It is engraved and blued, with well-figured curved walnut grips. It is marked "Lagrese Bte a Paris" and was manufactured in the late 1860s.

1650	1300	900	—	—	—

Model 389 Match-Maker
This bolt action is chambered for the .308 cartridge and is fitted with a 21.7" barrel. The stock is target style with adjustable chin support with benchrest-style buttpad. Weight is approximately 8.4 lbs. Introduced in 1997.

NIB	Exc.	V.G.	Good	Fair	Poor
2050	1650	1250	—	—	—

NOTE: Add $50 for magnum calibers.

LAMB, H. C. & CO.
Jamestown, North Carolina

Muzzle Loading Rifle
Chambered for .58 caliber and utilizes the percussion ignition system. It has a 33" barrel and a full-length oak stock held on by two barrel bands. There is a ramrod mounted under the barrel that is made of iron. All other trim is brass, and there is a bayonet lug at the muzzle. This rifle was made for the Confederacy; and the workmanship was crude, as it was on most CSA weapons. The stock is marked "H.C.Lamb & Co., N.C." There were supposedly 10,000 rifles ordered, but actually there were approximately 250 manufactured between 1861 and 1863. The rarity of the guns of the Confederacy gives them a great deal of collector appeal.

LANCASTER, CHARLES

London, England
SEE—British Double Guns

4 Barreled Pistol
A unique pistol for several reasons. It is chambered for the .476 rimfire cartridge and has four 6.25" barrels. The bore has a slightly twisted oval pattern that imparts a spin to the bullet. The barrels are hinged at the bottom and break downward for loading. It is a double-action type lockwork with a long, difficult trigger pull. The pistol is well made; and the caliber, suitably heavy to insure stopping power. The primary goal was military; and it was successful, seeing action in the Sudan campaigns of 1882 and 1885. This powerful weapon was also popular with big game hunters as a backup sidearm. The finish is blued, with checkered walnut grips. It is marked "Charles Lancaster (Patent) 151 New Bond St. London." This model was introduced in 1881. There are smaller-caliber versions of this pistol with shorter barrels. They are not as well known as the large-caliber version, and the values would be similar as their rarity would be balanced by the desirability of the large bore models.

Exc.	V.G.	Good	Fair	Poor
—	4250	2750	1100	750

2 Barreled Pistol
Similar to the 4 barreled version, with only two superposed barrels chambered for a variety of calibers from .320 to .577. It was also chambered for the 20 gauge and .410 bore shotshell. The advantage to the 2 barreled pistol is that it is lighter and better balanced. The 2 barrel is less common than the 4 barrel version.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
—	3300	2200	1000	600

4 Barreled Shotgun
This company also produced a shotgun in the 4 barrel configuration. It is chambered for 12 or 16 gauge and has 28" barrels. The gun is, as one would imagine, quite heavy and poorly balanced; and it was not a great success.

Exc.	V.G.	Good	Fair	Poor
—	3500	2200	1000	600

Bolt Action Rifle
A high-grade sporting rifle chambered for various different calibers. The barrel is 24" in length; and the finish is blued with a classic-styled, hand-checkered walnut stock. This rifle was discontinued in 1936.

LANG, J.

London, England
SEE—British Double Guns

Percussion Pistol
Chambered for .60 caliber percussion. It is a single-barreled, muzzle-loading pistol with a 3.25" barrel. This is essentially a defensive weapon that was well made, with Damascus barrels and an ornate engraved hammer and frame.

Exc.	V.G.	Good	Fair	Poor
—	—	4900	3000	1100

Gas Seal Revolver
Chambered for the .42 caliber percussion and has a 4.75" barrel. The unfluted cylinder holds 6 shots and is spring-loaded to be forced into the barrel when cocked, in order to obtain the "Gas Seal" feature desired. This revolver was well made and finished. It is lightly engraved, with a case-colored cylinder and a blued barrel and frame. The grips are finely checkered walnut, and the markings are "J.Lang 22 Cockspur St. London." This type of firearm was the forerunner of later designs such as the Russian Nagant. This revolver was manufactured in the 1850s.

LANGENHAN, FRIEDRICH

Zella Mehlis, Germany

Langenhan Army Model
A blowback-operated semi-automatic pistol chambered for the 7.65mm Auto Pistol cartridge. It has a 4" barrel and a detachable magazine that holds 8 rounds. Weight is about 24 oz. The pistol was made with a separate breechblock that is held into

the slide by a screw. This feature doomed this pistol to eventual failure as when this screw became worn, it could loosen when firing and allow the breechblock to pivot upwards—and the slide would then be propelled rearward and into the face of the shooter. This pistol was produced with wood grips.

400	325	275	200	100

Langenhan Closed Model

Similar to the Open Model with closed frame and other minor variations.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
400	325	275	200	100

Model 2

A blowback-operated semi-automatic pistol chambered for the 6.35mm cartridge. It has a 3" barrel and an 8-round detachable magazine. Weight is about 18 oz. The pistol fires by means of a concealed hammer, and the breechblock is separate from the rest of the slide and is held in place by a heavy crossbolt. The finish is blued, and the grips are molded checkered black plastic with the monogram "F.L." at the top. The slide is marked "Langenhan 6.35." This model was manufactured between 1921 and 1936.

Courtesy James Rankin

Exc.	V.G.	Good	Fair	Poor
375	300	250	200	100

Model 3

Similar to the Model 2 except that it is somewhat smaller. The barrel is 2.25" in length, and the butt is only large enough to house a 5-round detachable magazine. Weight is about 17 oz. The markings are the same with the addition of "Model 111" on the slide. This model was also manufactured until 1936.

LAURONA

Eibar, Spain

The list of models listed was compiled by Thomas E. Barker of Galaxy Imports, Ltd., Inc.

Model 67

The first over-and-under Laurona chambered for 12 gauge only with double triggers and 28" vent rib barrels with extractors. The boxlock action and barrels are blued, and the stock is checkered walnut in 20 lpi skip line checkering.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
300	200	100	75	50

Model 71

Similar to the Model 67 with minor cosmetic changes and improvements to facilitate ease of manufacturing. Receiver is bright chromed with roll engraving depicting dogs on the right side and birds on the left. This model was imported and sold by Sears & Robuck in about 1973 and 1974. The earlier models had traditional solid center ribbed blued barrels, the later models having black chrome finished solid ribbed barrels.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
300	200	100	75	50

MODEL 82

Similar to the Model 71 with auto-ejectors. Chambered for 12 gauge only. All barrels separated without center rib with Black Chrome finish and hard chrome bores with long forcing cones in chambers. Firing pins changed to traditional round type. Many internal parts improved for reliability. Checkering changed from skip diamond to standard 20 lpi. In most respects the 82 Models are representative of present-day Laurona over-and-under shotguns and will share most internal parts.

Model 82 Game

Barrels are 28" with 2-3/4" or 3" chambers, long forcing cones, hard chrome bores, 5mm rib, and chokes ****/**(IC/IM) or ***/*(M/F). Finish on barrels is black chrome with nickel receiver with Louis XVI style engraving. Tulip forend, field-style stock with plastic buttplate. Weighs approximately 7 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
350	250	150	125	100

Model 82 Super Game

Similar to the Model 82 Game except with more elaborate and very delicate engraving

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
350	250	150	125	100

Model 82 Trap Combi

Similar to the Model 82 Game except for 28" or 29" barrels. The rib is 8mm. The Trap stock is fitted with a rubber recoil pad. Weight is about 7.4 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
450	400	350	300	200

Model 82 Trap Competition

Similar to the Model 82 Trap Combi except for the 13mm aluminum rib with long white sight. Engraving consist of motifs on sides of receiver. Beavertail fluted forend and Monte Carlo Trap stock with black rubber special Trap recoil pad. Weight is approximately 8 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
500	400	300	250	200

Model 82 Super Trap (U only)

Similar to the Model 82 Trap Competition except for special trap Pachmayr recoil pad with imitation leather face. Engraving very delicate fine scroll. Weight is 7 lbs., 12 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
575	475	350	300	250

Model 82 Super Skeet

Similar to the Model 82 Super Trap except fitted with 28" barrels choked sheet with field-style buttstock with plastic buttplate. Weight is approximately 7 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
500	400	300	250	200

Model 82 Pigeon Competition

Similar to the Model 82 Trap Competition except fitted with 28" barrels. Recoil pad is special competition-style Pachmayr with imitation leather face. Weight is about 7 lbs., 13 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
550	450	350	300	250

Model 82 Super Pigeon

Similar to the Model 82 Super Trap except fitted with 28" barrels. Weight is approximately 7 lbs., 9 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
575	475	350	300	250

NOTE: The Super Models listed have nickel-finish receivers featuring delicate fine scroll engraving with black chrome relief. All barrels have a very durable rust-resistant black chrome finish.

Model 84S Super Game

Similar to the Model 82 Super Game except for the new single-selective trigger which is designated by "S" in the model number. Chambered for the 12 gauge 3" magnum with 28" barrels with 8mm rib. Weight is approximately 7 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
500	400	350	200	100

NOTE: The Super Game models listed were available with an extra set of 20 gauge multi-choke barrels in 26" or 28". Add $400 to ***Exc.*** value for these barrels. For models with cast-on stocks for left-hand shooters add $50 to ***Exc.*** value.

Model 83MG Super Game

Similar to the Model 82 Super Game except this model was the advent of Laurona's new multi-choke. **CAUTION!** The Laurona multi-choke is not compatible with any other brand of screw-in chokes because of the black chrome plating on the metric threads. Do not attempt to interchange with other guns. Barrel for this model in 12 gauge are 28" in length and for the 20 gauge 26" or 28". Both are chambered for the 3" shell. Rib is 8mm. Weight is about 7 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
500	400	350	200	100

Model 85MS Super Game

Similar to the Model 83MG Super Game except for the single-selective trigger. Chambered for the 12 or 20 gauge 3" Magnum. Weight is about 7 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
700	650	450	250	200

Model 84S Super Trap

Single-selective trigger with 29" barrels. Chambered for 2-3/4" shells with long forcing cones. The aluminum rib is 13mm wide. Auto ejectors. Receiver is nickel plated with fine scroll engraving with black chrome relief. Beavertail forearm and choice of Monte Carlo or standard Trap stock. Weight is about 7 lbs., 12 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
800	750	550	350	250

Model 85MS Super Trap

Similar to the Model 82S Super Trap except multi-choke in bottom barrel with fixed choke on top barrel. Weight is about 7 lbs., 12 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
900	825	700	500	300

Model 85MS Super Pigeon

Similar to the Model 85MS Super Trap except with 28" barrels with fixed IM choke on top barrel and multi-choke on bottom barrel. Intended for live bird competition. Weight is about 7 lbs., 4 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
950	900	800	600	300

Model 85MS Special Sporting

Similar to the Model 85MS Super Pigeon except for field-style buttstock with plastic buttplate. Intended for upland game. Weight is approximately 7 lbs., 4 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
950	900	800	600	300

Model 84S Super Skeet

Similar to the Model 85MS Special Sporting except choked skeet and skeet. Weight is approximately 7 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
950	900	800	600	300

LAURONA OVER-AND-UNDER MODELS SILHOUETTE 300

These guns are basically the same as the Super series above with these exceptions: They are readily identified by the white and black chrome stripped receiver with the model engraved on the side of the receiver. Barrels are multi-choked on both bores and have 11mm steel ribs. **NOTE:** Two types of chokes were used. Some guns came with knurl head-type as in the Super models and others were made with the flush invector style. A later option for ease of changing chokes is the knurl long choke, which is a flush-type with a knurl head added. Both later type chokes, the flush and the knurl long-type, can be used in the early multi-choke models with some extension showing.

Silhouette 300 Trap

This model has barrels 29" with 2-3/4" chambers and long forcing cones with hard chrome bores and 11mm rib. Beavertail forearm and straight comb trap stock fitted with a ventilated black rubber recoil pad are standard. Weight is approximately 8 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
750	500	300	200	100

Silhouette 300 Sporting Clays

Similar to the Model 300 Trap except with 28" barrels. Some guns came with 3" chambers. The buttstock is field style with plastic buttplate or hard rubber sporting clays pad. Weight is about 8 lbs.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
750	500	300	200	100

Silhouette 300 Ultra Magnum

Similar to the Model 300 Sporting Clays except with 3-1/2" chamber in 12 gauge for waterfowl hunting. Weight is about 7 lbs., 8 oz.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
850	600	450	275	150

LAURONA SIDE-BY-SIDE SHOTGUNS

Models with "X" after the model number were made after 1975 and finished with non-rusting black chrome on barrels and action with hard chrome bores. Guns were made in 12, 16, and 20 bore. Smaller gauges were made on special order. Side-by-side shotguns were discontinued by Laurona after 1978 to concentrate on the over-and-under market.

Model 11

Boxlock action with triple Greener-type round crossbolt. Independent firing pins bushed into the face of the action. Barrels of "Bellota" steel. Made in 12, 16, and 20 gauge.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
400	350	300	200	150

Model 13

Similar to the Model 11 except with Purdey-type bolting system. Extractor of double radius.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
400	350	300	200	150

Model 13X

Barrels and action finished in black chrome and hard chrome bores.

LAW ENFORCEMENT ORDNANCE CORP.

Ridgeway, Pennsylvania

Striker 12

A semi-automatic shotgun designed for self-defense. It is chambered for 12 gauge and has an 18.25" cylinder bored barrel. The unique feature about this gun is its 12-round drum magazine. The barrel is shrouded, and the stock folds. A fixed-stock model is also available. This gun was introduced primarily as a law enforcement tool, and the original models had 12" barrels and were legal for law enforcement agencies and Class 3 licensed individuals only. This shotgun is no longer imported into the U.S. This shotgun is now classified as a Class III weapon and subject to restrictions of the B.A.T.F. Be certain that the particular shotgun is transferable before purchase. If there are any questions contact B.A.T.F. before purchase.

Striker 12 shotguns in excellent condition may sell for as much as $1500.

LAZZERONI ARMS COMPANY

Tucson, Arizona

Model 2000ST-F

This model, as with all Lazzeroni models, is chambered for the company's own proprietary calibers. The 6.17 (.243) Spitfire, 6.53 (.257) Scramjet, 6.71 (.264) Phantom, 7.21 (.284) Tomahawk, 7.82 (.308) Patriot, and the 8.59 (.338) Galaxy. Fitted with a 27" match grade barrel with fully adjustable trigger, and removable muzzlebrake. Conventional fiberglass stock.

Le Francais Model 28 (Type Armee)

A unique pistol chambered for the 9mm Browning cartridge. It is a large pistol, with a 5" barrel that was hinged with a tip-up breech. This is a blowback-operated semi-automatic pistol that has no extractor. The empty cases are blown out of the breech by gas pressure. The one feature about this pistol that is desirable is that it is possible to tip the barrel breech forward like a shotgun and load cartridges singly, while holding the contents of the magazine in reserve. This weapon has fixed sights and a blued finish, with checkered walnut grips. It was manufactured in 1928.

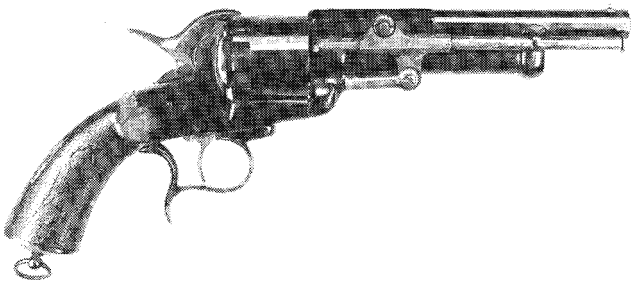
LE MAT

Paris, France

LeMat

Has a somewhat unique background that makes it a bit controversial among collectors. It is a foreign-made firearm manufactured in Paris, France, as well as in Birmingham, England. It was designed and patented by an American, Jean Alexander Le Mat of New Orleans, Louisiana; and it was purchased for use by the Confederate States of America and used in the Civil War. This is a curious firearm as it is a huge weapon that has two barrels. The top 6.5" barrel is chambered for .42 caliber percussion and is supplied by a 9-shot unfluted cylinder that revolves on a 5", .63 caliber, smoothbore barrel that doubles as the cylinder axis pin. These two barrels are held together by a front and a rear ring. The rear sight is a notch in the nose of the hammer, and there is an attached ramrod on the side of the top barrel. The weapon is marked "Lemat and Girards Patent, London." The finish is blued, with checkered walnut grips. There were fewer than 3,000 manufactured, of which approximately one-half were purchased by the Confederate States of America. They were made between 1856 and 1865.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	30000	25000	7500	1750

Baby LeMat

Similar in appearance (though a good deal smaller in size) to the standard model pistol. It is chambered for .32 caliber percussion and has a 4.25" top barrel and a .41 caliber smoothbore lower barrel. The cylinder is unfluted and holds 9 shots. The barrel is marked "Systeme Le Mat Bte s.g.d.g. Paris." It has British proofmarks and is blued, with checkered walnut grips. This is the scarcest model Le Mat, as there were only an estimated 100 manufactured and used by the Confederate States of America in the Civil War.

Exc.	V.G.	Good	Fair	Poor
—	—	22000	1100	3300

LeMat Revolving Carbine

Chambered for the centerfire, rimfire cartridges, or percussion. Barrel are half round half octagon and 20" in length. Chambered for a variaty of calibers but in percussion usually .42 caliber with a .62 caliber smoothbore lower barrel.

LE PAGE SA.

Liege, Belgium

Pinfire Revolver

This company was in the business of revolver manufacture in the 1850s, producing a .40 caliber pinfire revolver that was similar to the Lefauchaux and other pinfires of the day. The barrel lengths vary, and the unfluted cylinder holds 6 shots. These pistols are double-action and are sometimes found with ornate, but somewhat crude engraving. The finish is blued, with wood grips. The quality of these weapons is fair. They were serviceable; but the ammunition created somewhat of a problem, as it is rather fragile and difficult to handle with the protruding primer pin to contend with.

LEE FIREARMS CO.

Milwaukee, Wisconsin

Lee Single-Shot Carbine

A rare single-shot break-open carbine that pivots to the right side for loading. It is chambered for the .44 rimfire cartridge and has a 21.5" barrel with a hammer mounted in the center of the frame. The carbine has a walnut buttstock but no forearm and is marked "Lee's Firearms Co. Milwaukee, Wisc." There were approximately 450 manufactured between 1863 and 1865. There are few surviving examples, and one should be wary of fakes.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

LEECH & RIGDON

Greensboro, Georgia

Leech & Rigdon Revolver

This Confederate revolver was patterned after the 1851 Colt Navy. It is chambered for .36 caliber percussion and has a 6-shot unfluted cylinder. The 7.5" barrel is part-octagonal and has a loading lever beneath it. The frame is open-topped; and the finish is blued, with brass grip straps and walnut one-piece grips. The barrel is marked "Leech & Rigdon CSA." There were approximately 1,500 revolvers manufactured in 1863 and 1864. These were all contracted for by the Confederacy and are considered to be a prime acquisition for collectors. Beware of fakes!

Courtesy Jim and Caroline Cerny

Exc.	V.G.	Good	Fair	Poor

LEFAUCHAUX, CASIMER & EUGENE

Paris, France

Pinfire Revolver

The pinfire ignition system was invented by Casimir Lefauchaux in 1828 but was not widely used until the 1850s. It consists of a smooth rimless case that contains the powder charge and a percussion cap. A pin protrudes from the side of this case at the rear and when struck by the hammer is driven into the cap, thereby igniting the charge and firing the weapon. The pistols for this cartridge are slotted at the end of the cylinder to allow the pins to protrude and be struck by the downward blow of the hammer. This particular revolver is chambered for .43 caliber and has a 5.25" barrel. The cylinder holds 6 shots; and the finish is blued, with checkered walnut grips. This revolver was manufactured after 1865 and was selected for service by the French military.

—	—	575	250	125

LEFEVER ARMS CO.

Syracuse, New York

Founded by Dan Lefever, who was a pioneer in the field of breech-loading firearms. This company was founded in 1884, with Lefever as the president. He was referred to as "Uncle Dan" within the firearms industry. He was responsible for many improvements in the double-barrel shotgun design. He developed the automatic hammerless system in the late 1880s. He also developed a compensating action that allowed simple adjustments to compensate for action wear. In 1901 he was forced out of the company and organized another company—the D.M. Lefever, Sons & Company—also in Syracuse. Dan Lefever died in 1906, and his new company went out of business. The original company was acquired by Ithaca in 1916. They continued to produce Lefever guns until 1948.

Sideplated Shotgun

A double-barrel, side-by-side shotgun chambered for 10, 12, 16, or 20 gauge. It was offered with 26", 28", 30", or 32" barrels with various choke combinations. The barrels are either Damascus or fluid steel. Damascus guns have become collectible and in better condition—very good to excellent—can bring nearly the same price as the fluid-steel guns. It features a fractional sidelock because the hammers were mounted in the frame and the sears and cocking indicators were mounted on

the sideplates. After serial number 25,000, the entire locking mechanism was frame mounted and only the cocking indicators remained on the side plates. Double triggers are standard. The finish is blued, with a checkered walnut stock. There are a number of variations that differ in the amount of ornamentation and the quality of materials and workmanship utilized in their construction. Automatic ejectors are represented by the letter "E" after the respective grade designation. This shotgun was manufactured between 1885 and 1919. We strongly recommend that a qualified appraisal be secured if a transaction is contemplated.

There was also an Optimus Grade and a Thousand Dollar Grade offered. These are extremely high-grade, heavily ornamented firearms inlaid with precious metals. They are extremely rare, and evaluating them on a general basis is impossible.

NOTE: For all models listed: 20 gauge add 25 percent. Single-selective trigger add 10 percent.

LEFEVER ARMS COMPANY, INC. (ITHACA)

During 1916, the Ithaca Gun company purchased the gunmaking assets of the Syracuse, New York based, Lefever Arms Company. Between then and World War I, they continued to manufacture the same sideplate gun that had been made in Syracuse until about 1919 when they were discontinued. Prices for those guns are listed above. During 1921, Ithaca Gun Company, under the name the Lefever Arms Company, Inc., introduced a line of lower costs, boxlock guns. Eventually, six different models were produced. Ithaca's Lefever guns were produced in 12, 16, and 20 gauges, and in .410 bore. Twenty gauge guns often command a price premium of 50 percent; a .410 bore gun may command up to a 200 percent premium.

Nitro Special

A side-by-side, double-barrel shotgun chambered for 12, 16, or 20 gauge, as well as .410. The barrels were offered in lengths of 26" to 32" with various choke combinations. It features a boxlock action with double triggers and extractors standard. The finish is blued, with a case-colored receiver and a check-

ered walnut stock. This model was manufactured between 1921 and 1948 and, incredible as it may seem, its price at introduction was $29. Add 100+ percent for .410.

Exc.	V.G.	Good	Fair	Poor
600	400	250	200	—

NOTE: Single-selective trigger add $100. Automatic ejectors add $200.

Long Range Single-Barrel Trap and Field (Model 2)

Manufactured from 1927 to 1947, the Model 2 was a single-barrel gun with no rib. Like the Nitro Special, it had walnut stocks that were line cut checkered at the grip area of the buttstock and on the forend.

Exc.	V.G.	Good	Fair	Poor
500	300	200	100	—

Single-Barrel Trap Ventilated Rib (Model 3)

Manufactured from 1927 to 1942, the Model 3 was a single-barrel gun with the same ventilated rib that was used on the "Knick" trap gun. The walnut stocks had line cut checkering at the grip area of the buttstock and on the forend.

Exc.	V.G.	Good	Fair	Poor
1200	500	250	100	—

Double-Barrel Ventilated Rib Trap (Model 4)

Manufactured during 1929 but catalogued until 1939, the Model 4 was a double-barrel gun with a ventilated rib barrel. The walnut stocks had line cut checkering at the grip area of the buttstock and on the beavertail forend. Only about 200 units were produced.

Exc.	V.G.	Good	Fair	Poor
2000	1200	1000	700	—

A Grade (Model 5)

Manufactured from 1936 to 1939, the A Grade was a double-barreled gun. The walnut stocks had pointed checkering cut at the grip area of the buttstock and on the splinter forend. A line engraving outlined its nicely sculptured frame.

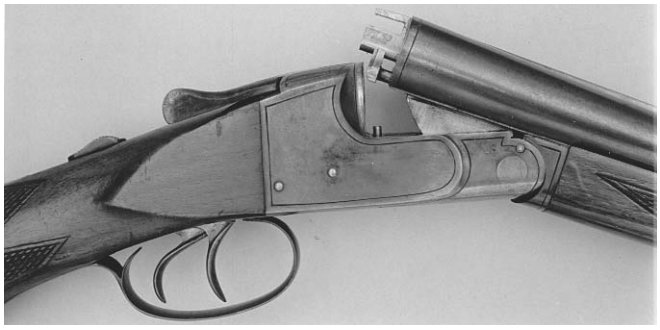

Photo by Walter C. Snyder

LEFEVER, D. M., SONS & COMPANY

Syracuse, New York

"Uncle Dan" Lefever founded the Lefever Arms Company in 1884. In 1901 he was forced out of his company and founded the D.M. Lefever, Sons & Company. He continued to produce high-grade, side-by-side shotguns, but of a totally new boxlock design. There were approximately 1,200 shotguns of all variations produced during this period, making them extremely rare and difficult to evaluate on a general basis. We list the models and average values but strongly suggest securing qualified appraisal if a transaction is contemplated.

Lefever Double-Barrel Shotgun

A side-by-side, double-barrel shotgun chambered for 12, 16, or 20 gauge. It was offered with various-length barrels and choke combinations that were made to order. It features double triggers and automatic ejectors. A single-selective trigger was available as an option. The finish is blued, with a checkered walnut stock. The individual grades differ in the amount of ornamentation and the general quality of the materials and workmanship utilized in their construction. This model was discontinued in 1906.

There are an "Optimus" and an "Uncle Dan" grade, which are top-of-the-line models, that features extremely high quality in materials and workmanship and a great deal of ornamentation. This firearm is extremely rare and seldom found in today's market. It is impossible to evaluate it on a general basis.

Einhand Model 2A

This unique design resembled the Swiss Chylewski. It allows the shooter to cock and fire this blowback-operated semi-automatic pistol with one hand (Einhand). It is chambered for the 6.35mm cartridge and has a 2" barrel. The magazine holds 6 shots, and the finish is blued, with molded horn grips marked "Lignose." The trigger guard on this pistol has a reverse curve that fits the finger, and it moves backward to cock the slide. The short-grip model without the Einhard feature was the Model 2; the long grip model without the Einhand was the Model 3. The first 9,000 to 10,000 examples (all four variations serial numbered in the same series) were marketed under the Bergmann name; only later Lignose. It was manufactured in the early 1920s by the Bergman Company, but the firm was merged with Lignose under whose name it was produced.

LILLIPUT

SEE—Menz

LINDE A.

Memphis, Tennessee

Pocket Pistol

This company manufactured a small, concealable firearm patterned after the Henry Deringer Philadelphia-type pistol. It is chambered for .41 caliber percussion and has a 2.5" barrel, German silver mountings, and a walnut stock. It was manufactured in the 1850s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*

LINDSAY, JOHN P.

Naugatuck, Connecticut
Union Knife Company

The Union Knife Company manufactured the Lindsay 2-shot pistols for the inventor, John P. Lindsay. There are three separate and distinct models listed.

2 Shot Belt Pistol

An oddity. It is a single-barreled, .41 caliber percussion pistol with a double chamber that contains two powder charges and projectiles that are simultaneously fired by two separate hammers. The hammers are released by a single trigger that allows them to fall in the proper sequence. The 5.5" octagonal barrel is contoured into a radical stepped-down shape, and there is a spur trigger. The frame is brass and has scroll engraving. The barrel is blued and is marked "Lindsay's Young America." There were estimated to be fewer than 100 manufactured between 1860 and 1862.

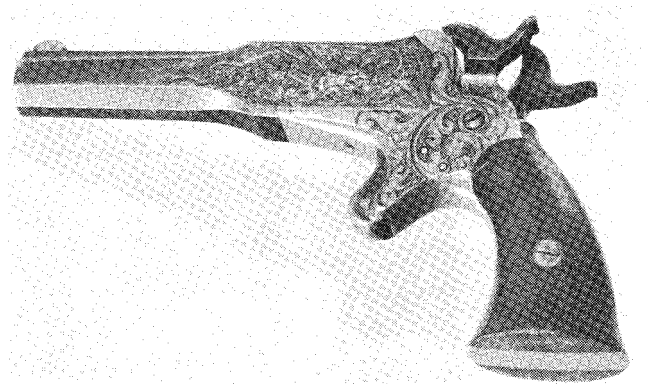
Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	4100	1500	700

2 Shot Pocket Pistol

A smaller version of the Belt Pistol. It is chambered for the same caliber but has a 4" barrel. There were approximately 200 manufactured between 1860 and 1862.

REMINDER

An "N/A" or "—" instead of a price indicates that there is no known price available for that gun in that condition, or the sales for that particular model are so few that a reliable price cannot be given.

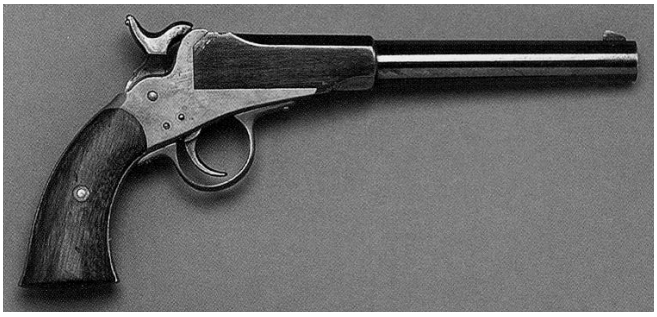


Courtesy W. P. Hallstein III and son Chip

Exc.	V.G.	Good	Fair	Poor
—	—	3000	1100	400

2 Shot Martial Pistol

A large version of the Lindsay design. It is chambered for .45 caliber smoothbore and has an 8.5" part-round, part-octagonal barrel. In other respects it is similar to the smaller models. The inventor tried to sell this pistol to the government but was unsuccessful. It was estimated that there were 100 manufactured between 1860 and 1862.



Exc.	V.G.	Good	Fair	Poor
—	—	5400	2200	700

LINS, A. F.

Philadelphia, Pennsylvania

Pocket Pistol

Chambered for .41 caliber percussion and a copy of the Henry Deringer pistol. It has a 3" barrel and a walnut stock and is marked "A. Fred. Lins. Philada." This pistol was manufactured between 1855 and 1860.

Exc.	V.G.	Good	Fair	Poor
—	—	1900	875	350

Rifled Musket

A single-shot, muzzleloading, percussion rifle chambered for .58 caliber. It has a 39" barrel and a full-length walnut stock held on by three barrel bands. There is an iron ramrod mounted under the barrel. The mountings are iron, and there is a bayonet lug combined with the front sight. The lock is marked "A. Fred. Lins/Philada." This is a rare weapon that was used by Union forces in the Civil War. There were approximately 200 manufactured in 1861 and 1862.

LJUNGMAN

Eskilstuna, Sweden
Carl Gustav

NOTE: For history, technical data, descriptions, and prices see the *Standard Catalog of Military Firearms,* under Sweden.

LJUTIC INDUSTRIES

Yakima, Washington

Bi-Matic Semi-Automatic

A custom-built, gas-operated, semi-automatic shotgun that is known for its low level of felt recoil. It is chambered for 12 gauge and has 26" to 32" barrels choked for either skeet or trap. The stock specifications are to the customer's order. There are options available that affect the value, so we recommend an individual appraisal.

Exc.	V.G.	Good	Fair	Poor
2000	1500	1000	800	400

Dynatrap Single-Barrel

A single-shot trap gun chambered for 12 gauge. It has a 33" vent rib full-choke barrel and features a push-button opener and a manual extractor. The stock is made to trap specifications. There are many options that affect the value.

Exc.	V.G.	Good	Fair	Poor
2000	1500	1000	800	400

Model X-73 Single-Barrel

Similar features to the Dynatrap, with a high competition rib. Appraisal is recommended.

Exc.	V.G.	Good	Fair	Poor
2500	2000	1500	950	500

Mono Gun Single-Barrel

Chambered for 12 gauge and has a 34" vent rib barrel. It is essentially a custom-order proposition that is available with a standard, as well as a release, trigger. There are many value-affecting options available.

NIB	Exc.	V.G.	Good	Fair	Poor
3800	3000	2250	1500	900	500

LTX Model

A deluxe version of the Mono Gun with a 33" medium-height vent rib and a high-grade walnut stock with fine hand checkering. Options raise values drastically.

NIB	Exc.	V.G.	Good	Fair	Poor
5000	4000	3000	1500	900	500

Space Gun

A unique single-barrel gun chambered for 12 gauge, with trap choking. It has a stock and forearm that reminds one of a crutch in appearance but which allows the shooter to have in-line control with little felt recoil. The barrel, forearm, and stock are all on one line. There is a recoil pad and a high ventilated rib.

NIB	Exc.	V.G.	Good	Fair	Poor
3750	3000	2250	1500	900	500

Bi-Gun Over-and-Under

An over-and-under double chambered for 12 gauge. It has 30" or 32" vent ribbed barrels that are separated. The choking is to trap specifications, and the stock is deluxe hand-checkered walnut.

NIB	Exc.	V.G.	Good	Fair	Poor
10000	8000	6000	4000	2000	1000

Bi-Gun Combo

The over-and-under Bi-Gun supplied with a high ribbed single-barrel in addition to the separated over-and-under barrels. It is furnished in a fitted case, and the walnut is of exhibition grade.

NIB	Exc.	V.G.	Good	Fair	Poor
17000	13000	7000	4000	2000	1000

LM-6 Super Deluxe

This is a custom-built over-and-under gun made to the customer's specifications. Available in 12 gauge with barrel lengths from 28" to 34". All other specifications are custom. Expert appraisal recommended prior to sale.

NIB	Exc.	V.G.	Good	Fair	Poor
18000	13500	8000	—	—	—

NOTE: Extra single-barrel add $7,000.

LLAMA

Manufactured by
Gabilondo y Cia
Vitoria, Spain

This is the same firm that was founded in 1904 and produced several inexpensive revolvers and pistols prior to 1931. In 1931 the company began to produce a semi-automatic pistol based on the Colt Model 1911. They were of high quality and have been sold around the world. After the Spanish civil war the company moved its facilities to Vitoria, Spain, where it continued to build handguns under the Llama trade name. In the 1980s the firm introduced a new line of pistols that were more modern in design and function. The Llama pistol is still produced today. For Llama pistols built prior to 1936 the slide marking reads: "GABILONDO Y CIA ELOEIBAR (ESPANA) CAL 9MM/.380IN LLAMA." For pistols built after 1936 the slide marking reads: "LLAMA GABILONDO Y CIA ELOEIBAR (ESPANA) CAL 9MM .380." Current production Llama pistols will show a slide marking with either "LLAMA CAL..." or "GABILONDO Y CIA VITORIA (ESPANA)" and the Llama logo. "Llama" is now a trade name for handguns manufactured by Bersa of Argentina.

LLAMA AUTOMATICS

Model I-A

This is a 7.65mm blowback design introduced in 1933. Magazine capacity is 7 rounds. The barrel was 3.62", overall length 6.3", and weight about 19 oz.

Exc.	V.G.	Good	Fair	Poor
225	175	125	100	75

Model II

Chambered for the 9mm Short introduced in the same year. Identical to the Model I. Discontinued in 1936.

Exc.	V.G.	Good	Fair	Poor
250	200	150	125	100

Model III

An improved version of the Model II. Introduced in 1936 and discontinued in 1954.

Exc.	V.G.	Good	Fair	Poor
275	225	175	125	100

Model III-A

Similar to the Model III, chambered for the .380 ACP, but with the addition of the Colt-type grip safety. Introduced in 1955. Weight is about 23 oz.

Exc.	V.G.	Good	Fair	Poor
250	200	150	125	100

Model IV

Chambered for the 9mm Largo or .380 ACP. Is not fitted with a grip safety. Introduced in 1931, it is the first of the Llama designs.

Exc.	V.G.	Good	Fair	Poor
275	225	175	125	100

Model V

The same as the Model IV but was intended for export to the United States and is stamped "made in Spain" on the slide.

Exc.	V.G.	Good	Fair	Poor
250	200	150	100	75

Model VI

Chambered for the 9mm Short and without a grip safety.

Exc.	V.G.	Good	Fair	Poor
250	200	150	100	75

Model VII

This model was introduced in 1932 and manufactured until 1954. It is chambered for the .38 Super Auto cartridge. It does not have a grip safety.

Exc.	V.G.	Good	Fair	Poor
275	225	175	125	100

Model VIII

This model was introduced in 1955 and is chambered for the .45 ACP, .38 Super, or 9mm Largo. It is fitted with a grip safety. Barrel length is 5", overall length is 8.5", and weight is about 38 oz. Magazine capacity is 7 rounds.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
300	250	175	125	100

NOTE: For the .38 Super cartridge add $25.

Model IX

Chambered for the 7.65mm Para, 9mm Largo, or .45 ACP, this model has a locked breech with no grip safety. Built from 1936 to 1954.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
325	275	200	150	100

Model IX-A

This version of the Model IX is fitted with a grip safety. Current production models are chambered for the .45 ACP only. Weighs about 30 oz. with 5" barrel.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
275	225	150	125	100

Model IX-B

This version of the Model IX series is chambered in .45 ACP. It is fitted with an extended slide release, black plastic grips, and target-type hammer. Offered in blue or satin chrome finish.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
350	300	250	175	125	100

Model IX-C

This is the current large-frame version of the Model IX. It is chambered for the .45 ACP and is fitted with a 5.125" barrel. Blade front sight with adjustable rear sight. Magazine capacity is 10 rounds. Weight is approximately 41 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
350	300	250	200	150	100

Model IX-D

This model is a compact frame version with a 4.25" barrel and chambered for the .45 ACP cartridge. Stocks are black rubber. Fixed front sight with adjustable rear. Introduced in 1995. Magazine capacity is 10 rounds. Weight is about 39 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
350	300	—	—	—	—

Model X

First produced in 1935, this model is chambered for the 7.65mm cartridge. It has no grip safety.

NOTE: Add $125 for satin chrome finish.

Mugica

Eibar gun dealer Jose Mugica sold Llama pistols under his private trade name. They are marked “mugica-ebir-spain” on the slide. These pistols do not seem to have any additional value over and above their respective Llama models. For the sake of clarification the Mugica models are listed with their Llama counterparts:

Mugica Model 101	Llama Model X
Mugica Model 101-G	Llama Model X-A
Mugica Model 105	Llama Model III
Mugica Model 105-G	Llama Model III-A
Mugica Model 110	Llama Model VII
Mugica Model 110-G	Llama Model VIII
Mugica Model 120	Llama Model XI

Tauler

In an arrangement similar to Mugica a gun dealer in Madrid sold Llama pistols under his own brand name. Most of these pistols were sold in the early 1930s to police and other government officials. The most common Llama models were Models I to VIII. Slide inscriptions were in English and had the name Tauler in them. No additional value is attached to this private trademark.

REVOLVERS

Ruby Extra Models

These revolvers were produced in the 1950s and were copies of Smith & Wessons. They were marked "RUBY EXTRA" on the left side of the frame. At the top of the grips was a Ruby medallion. The barrel address is stamped: gabilondo y cia elgoeibar espana. The Ruby Extra Models represent the company's attempts to produce and sell a low-cost revolver.

Model XII

This model is chambered for the .38 Long cartridge and is fitted with a 5" barrel and a squared butt.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
200	150	125	100	75

Model XIII

(Currently imported by Century International Arms Co.) Chambered for the .38 Special, this revolver has a round butt with 4" or 6" ventilated rib barrel. The 6" barreled gun was fitted with adjustable sights and target grips.

LONDON ARMOURY COMPANY

London

This firm was established in 1856, by Robert Adams. In addition to marketing revolvers based upon Adams' designs, the London Armoury Company were major retailers of other arms, particularly Enfield Pattern 53 Percussion Rifles. During the 1870s, the London Armoury distributed Colt pistols. During its business life, the London Armoury Company was located at these addresses:

Henry Street	1857-1863
36 King William Street	1864-1868
54 King William Street	1868-1883
118 Queen Victoria Street	1884-1886
114 Queen Victoria Street	1887-1905
1 Lawrence Pounty Hill	1905-1910
31 Bury Street, St. James	1910-1939
10 Ryder Street, St. James	1940-1950

Although the firm continued in business after 1950, its operations were restricted to the trade of used arms.

LONE STAR RIFLE COMPANY

Conroe, Texas

This company builds custom blackpowder rifles. They are built on the rolling block design and are offered in two basic configurations. There are a wide number of options that will affect the price of these rifles.

Sporting Rifle

This is a basic configuration that features a straight grip stock with semi-crescent butt. Offered in a wide variety of calibers from .32-40 to .50-90. Barrel lengths, barrel configurations, wood, triggers, sights, engraving, finishes, hammers, and accessories will greatly affect the final price.

Basic retail price: $1,995.

Target Rifle

This is a basic configuration that features a straight grip stock with semi-crescent butt. Offered in a wide variety of calibers from .32-40 to .50-90. Barrel lengths, barrel configurations, wood, triggers, sights, engraving, finishes, hammers, and accessories will greatly affect the final price.

Basic retail price: $1,995.

LORCIN ENGINEERING CO., INC.

Mira Loma, California

NOTE: This company was in business from 1989 to 1999.

LUGERS

Various Manufacturers

Just before the turn of the 20th century, Georg Luger redesigned the Borchardt semi-automatic pistol so that its mainspring was housed in the rear of the grip. The resulting pistol was to prove extremely successful and his name has become synonymous with the pistol despite the fact his name never appeared on it.

These companies manufactured Luger pattern pistols at various times.

1. DWM - Deutsch Waffen und Munitions - Karlsruhe, Germany
2. The Royal Arsenal of Erfurt Germany
3. Simson & Company - Suhl, Germany
4. Mauser - Oberndorf, Germany
5. Vickers Ltd. - England
6. Waffenfabrik Bern - Bern, Switzerland
7. Heinrich Krieghoff - Suhl, Germany

Those interested in these pistols are advised to read the various books written about the marque which are listed in the bibliography at the close of this book.

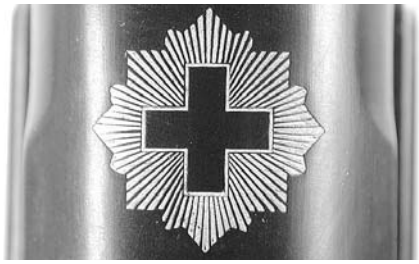
DEUTSCH WAFFEN UND MUNITIONS

1899/1900 Swiss Test Model

4.75" barrel, 7.65mm caliber. The Swiss Cross in Sunburst is stamped over the chamber. The serial range runs to three digits. With fewer than 100 manufactured and only one known to exist, it is one of the rarest of the Lugers and the first true Luger that was produced. This model is far too rare to estimate an accurate value.

1900 Swiss Contract

4.75" barrel, 7.65mm caliber. The Swiss Cross in Sunburst is stamped over the chamber. The military serial number range is 2001-5000; the commercial range, 01-21250. There were approximately 2,000 commercial and 3,000 military models manufactured.



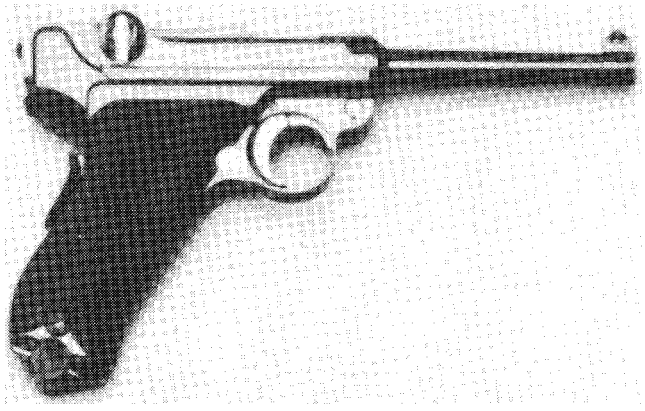
Swiss Cross & Sunburst Courtesy Gale Morgan

Exc.	V.G.	Good	Fair	Poor
6000	4700	2000	1500	1000

NOTE: Wide trigger add 20 percent.

1900 Commercial

4.75" barrel, 7.65mm caliber. The area above the chamber is blank. The serial range is 01-19000, and there were approximately 5,500 manufactured for commercial sale in Germany or other countries. Some have "Germany" stamped on the frame. These pistols were imported into the U.S., and some were even stamped after blueing.



Courtesy Gale Morgan

Exc.	V.G.	Good	Fair	Poor
5000	3700	2000	1000	650

1900 American Eagle

4.75" barrel, 7.65mm caliber. The American Eagle crest is stamped over the chamber. The serial range is between 2000-200000, and there were approximately 11,000-12,000 commercial models marked "Germany" and 1,000 military test models without the commercial import stamp. The serial numbers of this military lot have been estimated at between 6100-7100.

Exc.	V.G.	Good	Fair	Poor
4500	3200	1500	850	600

1900 Bulgarian Contract

An old model, 1900 Type, with no stock lug. It has a 4.75" barrel and is chambered for the 7.65mm cartridge. The Bulgarian crest is stamped over the chamber, and the safety is marked in Bulgarian letters. The serial range is 20000-21000, with 1,000 manufactured. This is a military test model and is quite rare as most were rebarreled to 9mm during the time they were used. Even with the 9mm versions, approximately 10 are known to exist. It was the only variation to feature a marked safety before 1904.

12000	8000	4000	2500	1800

1900 Carbine

11.75" barrel, 7.65mm caliber. The carbines have a gracefully contoured and finely checkered walnut forearm and detachable shoulder stock. The rear sight on this extremely rare variation is a five-position sliding model located on the rear link. The area above the chamber is blank. The serial range is three digits or under, and this may have been a prototype as less than 100 were produced. This model is far too rare to estimate an accurate value.

1902 Prototype

6" barrel, 7.65mm caliber. The serial numbers are in the 10000 range with a capital B, and the chamber is blank. The 6" barrel is of a heavy contour, and there were less than 10 manufactured. The rarity of this variation precludes estimating value.

1902 Carbine

11.75" barrel, 7.65mm caliber. The sight has four positions and is silver-soldered to the barrel. A stock and forearm were sold with this weapon. The serial range was 21000-22100 and 23500-24900. There were approximately 2,500 manufactured for commercial sale in and out of Germany. Many were imported into the United States, but none here have been noted with the "Germany" export stamp.

14500	10000	6000	3500	2500

NOTE: With stock add 50 percent.

1902 Commercial—"Fat Barrel"

Thick 4" barrel, 9mm caliber. The area above the chamber is blank. It is chambered for the 9mm cartridge, and the serial numbers fall within the 22300-22400 and the 22900-23500 range. There were approximately 600 manufactured, and the greater part of those noted were marked "Germany" for export purposes.

Exc.	V.G.	Good	Fair	Poor
12000	9000	6000	4000	1500

1902 American Eagle

As above, with an American Eagle stamped over the chamber. It is chambered for the 9mm cartridge, and the serial numbers fall within the 22100-22300 and the 22450-22900 range. This model was solely intended for export sales in the U.S.A., and all are marked "Germany" on the frame. There were approximately 700 manufactured.

Exc.	V.G.	Good	Fair	Poor
11000	9000	5500	3750	1300

1902 American Eagle Cartridge Counter

As above, with a "Powell Indicating Device" added to the left grip. A slotted magazine with a numbered window that allows visual access to the number of cartridges remaining. There were 50 Lugers altered in this way at the request of the U.S. Board of Ordnance, for U.S. Army evaluation. The serial numbers are 22401-22450. Be especially wary of fakes!

Exc.	V.G.	Good	Fair	Poor
30000	25000	16000	6000	3500

1902 Presentation Carbine

11.75" barrel, 7.65mm caliber. These carbines have the initials of the owner gold-inlaid above the chamber. They are furnished with a checkered walnut stock and forearm. Only four have been noted in the 9000C serial number range. They have the initials "GL" for Georg Luger on the back of the rear toggle. They are too rare to estimate value.

1902/06 Carbine (Transitional)

11.75" barrel, 7.65mm caliber. Assembled from Model 1902 parts with a new toggle assembly. They have the four-position sliding sight, silver-soldered to the barrel, and a checkered walnut stock and forearm. There were approximately 100 manufactured in the 23600 serial number range.

NOTE: Add 50 percent to a 1914 dated chamber ***without*** a stock lug.

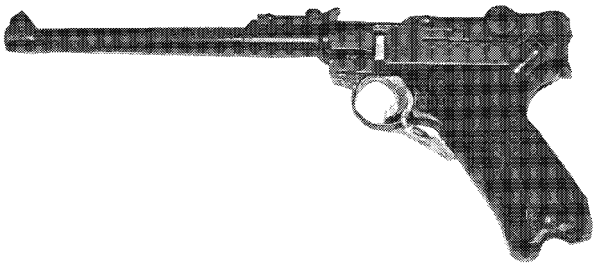
1913 Commercial

As above, with a grip safety. Approximately 1,000 manufactured, with serial numbers 71000-72000; but few have been noted, and it is considered to be quite rare.

Exc.	V.G.	Good	Fair	Poor
2800	1700	1300	850	600

1914 Artillery

8" barrel, 9mm caliber. It features a nine-position adjustable sight that has a base that is an integral part of the barrel. This model has a stock lug and was furnished with a military-style flat board stock and holster rig (see Accessories). The chamber is dated from 1914-1918, and the safety and extractor are both marked. This model was developed for artillery and machine gun crews; and many thousands were manufactured, with one- to five-digit serial numbers—some have letter suffixes. This model is quite desirable from a collector's standpoint and is rarer than its production figures would indicate. After the war many were destroyed as the allies deemed them more insidious than other models, for some reason.



Courtesy Gale Morgan

3000	2000	1300	900	600

NOTE: For models stamped with 1914 date add 75 percent.

DWM Double Dated

4" barrel, 9mm cartridge. The date 1920 or 1921 is stamped over the original chamber date of 1910-1918, creating the double-date nomenclature. These are arsenal-reworked WWI military pistols and were then issued to the German military and/or police units within the provisions of the Treaty of Versailles. Many thousands of these Lugers were produced.

Exc.	V.G.	Good	Fair	Poor
1300	800	550	400	300

1920 Police Rework

As above, except that the original manufacture date was removed before the rework date was stamped. There were many thousands of these produced.

Exc.	V.G.	Good	Fair	Poor
800	650	500	350	300

1920 Commercial

Similar to the above, with 3.5" to 6" barrels in 7.65mm or 9mm and marked "Germany" or "Made in Germany" for export. Others are unmarked and were produced for commercial sale inside Germany. Some of these pistols are military reworks with the markings and the proofmarks removed; others were newly manufactured. The extractors and safety are both marked, and the chamber is blank. The serial number range is one to five digits, and letter suffixes often appear.

Exc.	V.G.	Good	Fair	Poor
1700	1200	600	450	350

NOTE: Add 15 percent for 9mm.

1920 Commercial Navy

6" barrel, 9mm caliber. Some have a stock lug; others have been noted without. The chamber area is generally blank, but some have been found with 1914-1918 dates stamped upon them. These were reworked by DWM from Military Navy Lugers after WWI for commercial sales. They are marked "Germany" or "Made in Germany" and were sold by Stoeger Arms, among others. The extractor and safety are both marked, and the unique Navy sight is on the rear toggle link. No one knows exactly how many were produced, but they are quite scarce.

Exc.	V.G.	Good	Fair	Poor
6000	3000	1600	1100	850

1920 Commercial Artillery

8" barrel, 9mm caliber. Erfurt-manufactured pistols, as well as DWM-manufactured pistols, were reworked in this manner. The export markings "Germany" or "Made in Germany" are found on most examples. The number produced is not known, but examples are quite scarce.

3500	2300	1100	700	450

1920 Long Barrel Commercial

10" to 24" barrels, 7.65mm or 9mm caliber. The extractor and safety are both marked, and an artillery model rear sight is used. This model was often built to a customer's specifications. They are rare, and the number manufactured is not known.

Exc.	V.G.	Good	Fair	Poor
3000	2000	1500	1000	800

1920 Carbine

11.75" barrel, 7.65mm caliber. The chamber is blank, and the extractor is marked either "Geleden" or "Loaded." The safety is not-marked. The carbine has a checkered walnut forearm and stock, and most have the "Germany" or "Made in Germany" export stamp. There were few of these carbines manufactured for commercial sales in and outside of Germany.

4500	3000	1600	1000	800

1923 Stoeger Commercial

3.5" to 24" barrels, 7.65mm or 9mm caliber. There is a stock lug. The chamber area is either blank or has the American Eagle stamped on it. The export stamp and "A.F.Stoeger Inc. New York" is found on the right side of the receiver. The extractor and safety are marked in German or English. This was the model that Stoeger registered with the U.S. Patent office to secure the Luger name, and some examples will be so marked. There were less than 1,000 manufactured, with one- to five-digit serial numbers without a letter suffix. Individual appraisal must be secured on barrel lengths above 6". Be wary as fakes have been noted. The values given here are for the shorter barreled models.

NOTE: For barrel lengths over 8" add 25 percent.

Abercrombie & Fitch Commercial 100

Swiss Lugers were made for commercial sale in the United States by "Abercrombie & Fitch Co. New York. Made in Switzerland."—in either one or two lines—is stamped on the top of the barrel. The barrel is 4.75" in length, and there were 49 chambered for 9mm and 51 chambered for the 7.65mm cartridge. This pistol has a grip safety and no stock lug. The Swiss Cross in Sunburst is stamped over the chamber. The extractor is marked, but the safety area is polished. The serial range is four digits—some with a letter suffix. This is a rare and desirable Luger. Be careful of fakes on models of this type and rarity.

4000	2500	1000	800	550

VICKERS LTD.

1906 Vickers Dutch

4" barrel, 9mm caliber. There is no stock lug, and it uses a grip safety. The chamber is blank, and the extractor is marked "Geleden." "Vickers Ltd." is stamped on the front toggle link. The safety is marked "RUST" with an upward pointing arrow. Examples have been found with an additional date as late as 1933 stamped on the barrel. These dates indicate arsenal refinishing and in no way detract from the value of this variation. Arsenal reworks are matte-finished, and the originals are a higher-polished rust blue. There were approximately 10,000 manufactured in the 1-10100 serial-number range.

Exc.	V.G.	Good	Fair	Poor
3500	2800	1800	1200	750

ERFURT ROYAL ARSENAL

1908 Erfurt

4" barrel, 9mm caliber. It has no stock lug; and the year of manufacture, from 1910-1913, is stamped above the chamber. The extractor and safety are both marked in German, and "ERFURT" under a crown is stamped on the front toggle link. There were many thousands produced as Germany was involved in WWI. They are found in the one- to five-digit serial range, sometimes with a letter suffix.

Exc.	V.G.	Good	Fair	Poor
1500	950	600	400	350

1914 Erfurt Military

4" barrel, 9mm caliber. It has a stock lug and the date of manufacture over the chamber, 1914-1918. The extractor and safety are both marked in German, and the front link is marked "ERFURT" under a crown. The finish on this model is rough; and as the war progressed in 1917 and 1918, the finish got worse. There were many thousands produced with one- to five-digit serial numbers, some with letter suffixes.

Exc.	V.G.	Good	Fair	Poor
1000	800	600	400	350

1914 Erfurt Artillery

8" barrel, 9mm caliber. It has a stock lug and was issued with a flat board-type stock and other accessories which will be covered in the section of this book dealing with same. The sight is a nine-position adjustable model. The chamber is dated 1914-1918, and the extractor and safety are both marked in German. "ERFURT" under a crown is stamped on the front toggle link. There were a great many manufactured with one- to five-digit serial numbers, some with a letter suffix. This model is similar to the DWM Artillery except that the finish is not as fine.

Exc.	V.G.	Good	Fair	Poor
2900	1700	1100	800	600

NOTE: Add 50 percent for 1914 dated chamber.

Double Date Erfurt

4" barrel, 9mm caliber. The area above the chamber has two dates: the original 1910-1918, and the date of rework, 1920 or 1921. The extractor and safety are both marked in German, and this model can be found with or without a stock lug. "ERFURT" under a crown is stamped on the front toggle link. Police or military unit markings are found on the front of the grip straps more often than not. There were thousands of these produced by DWM as well as Erfurt.

WAFFENFABRIK BERN

See separate section on Bern.

SIMSON & CO. SUHL, GERMANY

Simson & Co. Rework

4" barrels, 7.65 or 9mm caliber. The chamber is blank, but some examples are dated 1917 or 1918. The forward toggle link is stamped "SIMSON & CO. Suhl." The extractor and safety are marked in German. Most examples have stock lugs; some have been noted without them. The only difference between military models and commercial models is the proofmarks.

Exc.	V.G.	Good	Fair	Poor
2000	1300	900	600	500

Simson Grip Safety Rework

4" barrel, 9mm caliber and a grip safety was added. There is a stock lug. The chamber area is blank; the extractor is marked but the safety is not. There were only a few of these commercial reworks manufactured, and caution should be taken to avoid fakes.

Exc.	V.G.	Good	Fair	Poor
3200	2200	1500	850	550

Simson Dated Military

4" barrel, 9mm caliber. There is a stock lug, and the year of manufacture from 1925-1928 is stamped above the chamber. The extractor and the safety are both marked in German. The checkered walnut grips of Simson-made Lugers are noticeably thicker than others. This is an extremely rare variation. Approximately 2,000 were manufactured with one- to three-digit serial numbers, and few seem to have survived.

Exc.	V.G.	Good	Fair	Poor
3200	2200	1800	900	650

Simson S Code

4" barrel, 9mm caliber. The forward toggle link is stamped with a Gothic S. It has a stock lug, and the area above the chamber is blank. The extractor and the safety are both marked. The grips are also thicker. There were approximately 12,000 manufactured with one- to five-digit serial numbers—some with the letter "a" suffix. This pistol is quite rare on today's market.

Exc.	V.G.	Good	Fair	Poor
4200	3000	1500	1000	750

EARLY NAZI ERA REWORKS MAUSER

Produced between 1930 and 1933, and normally marked with Waffenamt markings.

Deaths Head Rework

4" barrel, 9mm caliber. It has a stock lug; and a skull and crossbones are stamped, in addition to the date of manufacture, on the chamber area. This date was from 1914-1918. The extractor and safety are both marked. The Waffenamt proof is present. It is thought that this variation was produced for the 1930-1933 era "SS" division of the Nazi Party. Mixed serial numbers are encountered on this model and do not lower the value. This is a rare Luger on today's market, and caution should be exercised if purchase is contemplated.

Exc.	V.G.	Good	Fair	Poor
2500	1500	950	600	450

Kadetten Institute Rework

4" barrel, 9mm caliber. It has a stock lug, and the chamber area is stamped "K.I." above the date 1933. This stood for Cadets Institute, an early "SA" and "SS" officers' training school. The extractor and safety are both marked, and the Waffenamt

is present. There were only a few hundred reworked, and the variation is quite scarce. Be wary of fakes.

Exc.	V.G.	Good	Fair	Poor
3200	2500	1100	800	600

Mauser Unmarked Rework

4" barrel, 9mm caliber. The entire weapon is void of identifying markings. There is extensive refurbishing, removal of all markings, rebarreling, etc. The stock lug is present, and the extractor and safety are marked. The Waffenamt proofmark is on the right side of the receiver. The number manufactured is not known.

Exc.	V.G.	Good	Fair	Poor
1450	1000	850	600	450

MAUSER MANUFACTURED LUGERS 1930-1942 DWM

Mauser Oberndorf

4" barrel, 9mm caliber. It has a stock lug, blank chamber area and a marked extractor and safety. This is an early example of Mauser Luger, and the front toggle link is still marked DWM as leftover parts were intermixed with new Mauser parts in the production of this pistol. This is one of the first Lugers to be finished with the "Salt" blue process. There were approximately 500 manufactured with one- to four-digit serial numbers with the letter "v" suffix. This is a rare variation.

Exc.	V.G.	Good	Fair	Poor
5000	3200	2000	1500	900

1934/06 Swiss Commercial Mauser

4.75" barrel, 7.65mm caliber. There is no stock lug, but it has a grip safety. The Swiss Cross in Sunburst is stamped above the chamber. The extractor and safety are marked in German. The front toggle link is marked with the Mauser banner. There were approximately 200 manufactured for commercial sale in Switzerland. This variation is very well finished, and the serial numbers are all four digits with a "v" suffix.

Exc.	V.G.	Good	Fair	Poor
7500	5500	4000	1800	1000

1935/06 Portuguese "GNR"

4.75" barrel, 7.65mm caliber. It has no stock lug but has a grip safety. The chamber is marked "GNR," representing the Republic National Guard. The extractor is marked "Carregada"; and the safety, "Seguranca." The Mauser banner is stamped on the front toggle link. There were exactly 564 manufactured according to the original contract records that the Portuguese government made public. They all have four-digit serial numbers with a "v" suffix.

Exc.	V.G.	Good	Fair	Poor
4000	2800	1800	900	750

1934 Mauser Commercial

4" barrel, 7.65mm or 9mm caliber. It has a stock lug, and the chamber area is blank. The extractor and the safety are marked. The Mauser banner is stamped on the front toggle link. The finish on this pistol was very good, and the grips are either checkered walnut or black plastic on the later models. There were a few thousand manufactured for commercial sales in and outside of Germany.

Exc.	V.G.	Good	Fair	Poor
3500	3000	1650	1100	700

S/42 K Date

4" barrel, 9mm caliber. It has a stock lug, and the extractor and safety are marked. This was the first Luger that utilized codes to represent maker and date of manufacture. The front toggle link is marked S/42 in either Gothic or script; this was the code for Mauser. The chamber area is stamped with the letter "K," the code for 1934, the year of manufacture. Approximately 10,500 were manufactured with one- to five-digit serial numbers—some with letter suffixes.

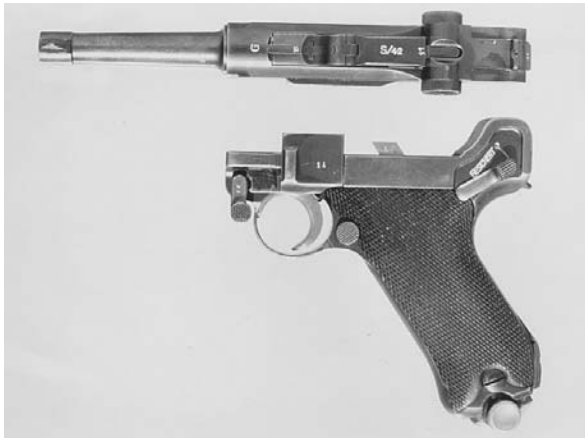
7500	5000	2200	1200	1000

S/42 G Date



Courtesy Orvel Reichert

As above, with the chamber stamped "G," the code for the year 1935. The Gothic lettering was eliminated, and there were many thousands of this model produced.

Exc.	V.G.	Good	Fair	Poor
2800	2000	1000	650	450

Dated Chamber S/42

4" barrel, 9mm caliber. The chamber area is dated 1936-1940, and there is a stock lug. The extractor and safety are marked. In 1937 the rust blue process was eliminated entirely, and all subsequent pistols were salt blued. There were many thousands manufactured with one- to five-digit serial numbers—some with the letter suffix.

Exc.	V.G.	Good	Fair	Poor
1600	1100	750	500	400

NOTE: Rarest variation is early 1937 with rust blued and strawed parts, add 20 percent.

S/42 Commercial Contract

4" barrel, 9mm caliber. It has a stock lug, and the chamber area is dated. It has a marked extractor and safety. The unusual feature is that, although this was a commercial pistol, the front toggle link is stamped S/42, which was the military code for Mauser. There were only a few hundred manufactured, so perhaps the toggles were left over from previous military production runs. The serial number range is four digits with the letter "v."

Exc.	V.G.	Good	Fair	Poor
2800	2000	1000	750	450

Code 42 Dated Chamber

4" barrel, 9mm caliber. The new German code for Mauser, the number 42, is stamped on the front toggle link. There is a stock lug. The chamber area is dated 1939 or 1940. There were at least 50,000 manufactured with one- to five-digit serial numbers; some have letter suffixes.

Exc.	V.G.	Good	Fair	Poor
1500	850	650	400	350

41/42 Code

As above, except that the date of manufacture is represented by the final two digits (e.g. 41 for 1941). There were approximately 20,000 manufactured with the one- to five-digit serial number range.

Exc.	V.G.	Good	Fair	Poor
1600	1350	900	700	500

byf Code

As above, with the "byf" code stamp on the toggle link. The year of manufacture, either 41 or 42, is stamped on the chamber. This model was also made with black plastic, as well as walnut grips. There were many thousands produced with the one- to five-digit serial numbers—some with a letter suffix.

Exc.	V.G.	Good	Fair	Poor
1500	950	750	450	350

Persian Contract 4"

4" barrel, 9mm caliber. It has a stock lug, and the Persian crest is stamped over the chamber. All identifying markings on this variation—including extractor, safety and toggle—are marked in Farsi, the Persian alphabet. There were 1,000 manufactured. The serial numbers are also in Farsi.

MALIN, F. E.

London, England

Boxlock and sidelock shotguns made by Malin were imported into the United States for a number of years. As these arms were all essentially built to specific customer's requirements, standard values cannot be provided. Prospective purchasers are advised to secure a qualified appraisal prior to acquisition.

Boxlock

Features an Anson & Deeley action and high-grade walnut. All other specification were on a custom-order basis. This gun should definitely be individually appraised as values will fluctuate greatly with options.

Basic Model

Saint-Bonnet-le-Chateau, France

This company manufactured the Walther PP and PPK models under license and these are marked "Manufacture de Machines du Haut-Rhin" on the left front of the slide and "Lic Excl. Walther" on the left rear. These arms were imported into the U.S.A. in the early 1950s by Thalson Import Company of San Francisco, California, and later by Interarms. The latter are marked "Mark 11" and "Made in France."

NEW PRODUCTION

Manurhin is now owned by Chapuis Armes.

Model PP

Similar to the Walther Model PP, with a revised safety. Discontinued.

MARBLE'S ARMS & MFG. CO.

Gladstone, Michigan

Marble's Game Getter Gun NFA, CURIO OR RELIC

The Game Getter has 12", 15", or 18" separated over-and-under rifled/smooth bore barrels in .22/.44 or .22/.410, a manually pivoted hammer striker to select the upper or lower barrel, an attached folding steel skeleton stock, and is intended to be fired from the shoulder. The tip-up barrels are opened by pulling back the trigger guard. Two versions, Model 1908 and Model 1921, indicating their first years of production, were made. Both apparently were designed by Webster L. Marble (1854-1930), and manufactured by Marble Safety Axe Co. of Gladstone, Michigan, which became Marble's Arms & Mfg. Co. in 1911.

Marble's suspended sales of the Game Getter in the United States after the Treasury Department ruled it was a "firearm" under the NFA, but continued sales abroad. Its retail price in 1934 was about $24 (12" or 15" barrels) to $26 (18" barrels). The Bureau of Internal Revenue removed the 18" barrel variation from the NFA in a Letter Ruling dated March 1, 1939. Today, the 12" and 15" barrel variations are controlled under the NFA in the "any other weapon" category. If the shoulder stock is removed from a 12", 15", or 18" barreled Game Getter, however, ATF has ruled it to be an NFA "firearm" subject to a $200 transfer tax.

Model 1908

Serial numbered from A to M; then 001 to 10000.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1500	900	750	550	425

Model 1921

Serial numbered from 10001 to 20076.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
900	750	550	450	375

NOTE: Boxed guns (wooden box, Model 1908; cardboard box, Model 1921) with accessories, or 18" barrel variations, nonstandard calibers (.25-20, .32-20, .38-40, etc.) command premiums of 50 to 200 percent or more; an original holster is $75 to $150. Two new-in-box Model 1908 with 15" and 18" barrels sold for $2,700 and $3,600, respectively, in 1994. An original wooden Model 1908 box alone may sell for $500 to $900. All 18" barrel variations are rare.

The Model 1908 was available in two variations. Model 1908A has a flexible rear tang sight, and the Model 1908B has a filler block. Some confusion about the serial numbering exists because some Marbles factory representatives gave out incorrect information during the 1960s and 1970s. According to some letters from this period on Marble's factory letterhead, serial numbers began with number 700 and ended with 9999. Original factory records, however, disclose that the Model 1908 was first shipped from the factory in 1909, and serial numbered with letters from A through M, before beginning numerically with serial number 001 through 10000, when production ended in May, 1914. Serial number 001 was shipped from the factory on March 3, 1909, and the last Model 1908 was shipped on May 22, 1918.

The markings on the Model 1908 are:

Type I (serial 1 to about 4000
Type II (about serial 4000 to 9999)

LEFT SIDE:

MANUFACTURED BY THE	**MANUFACTURED BY THE**
MARBLE SAFETY AXE CO. GLADSTONE, MICH. U.S.A. **MARBLE ARMS & MFG. CO.**	MARBLE SAFETY AXE CO. GLADSTONE, MICH. U.S.A. SUCCESSOR

RIGHT SIDE:

Calibers 22 & 44	***Calibers 22 & 44***
Patent Allowed	***Patent Allowed***

Each of the markings on the right side is enclosed within an elongated circle.

OTHER CHARACTERISTICS: Separate flat buttplate attached with two screws up to approximately serial number 1200; afterwards, a flattened buttplate was integrally formed from the same round steel used to form the skeleton stock. Early stocks have drop adjustment with a knurled collar 3/8" diameter by 13/16" long; at approximately serial number 2500, the collar was changed to 1/2" by 5/8" long. The hammer spur is curved down up to approximately serial number 2,000, then the curve at hammer is up.

The Model 1908 was originally designed for .22 short, long or LR and .44 shot and ball ammunition, but the most satisfactory load was the long-cased .44-40 that held the shot in place with a disk and mouth crimp. The 1915 Marble's catalog stated the Model 1908 was available for use with the 2" .410 shotgun shell; chambering is slightly different from that of the .44-40, but is seldom encountered.

Production of the Model 1908 was not resumed because of World War I. To meet the continuing demand for this extremely popular firearm, Marble's produced an entirely new gun in 1921. The grip, folding stock (made from cold-rolled sheet metal and nickel-plated), and other features were redesigned. The serial number range for the Model 1921 is 10001 (shipped in October 1921) to 20076. Most production of the Model 1921 apparently ended around the time of World War II; however, factory records disclose that Marble's was exporting 15" barrel Model 1921s into Canada in 1955, where their registration was not required at that time. Marble's also assembled approximately 200 Model 1921s from parts circa 1960-61, and sold them (without the holster) for $200 each.

The Model 1921 was originally designed from the 2" .410 shotgun shell, but Marble's changed the extractor marking on some guns to 2-1/2" or 2 1/2" to indicate factory rechambering for the 2.5" shell, which has been reported to have started in 1924. However, the change to a 2-1/2" chamber may not have been uniform, because both 2" and 2-1/2" marked guns have been observed in low (14000) and high (19000) serial number ranges. The lowest serial number with 2" marking observed so far is 14601. The range from approximately 14500 to 17000 have plastic rather than walnut grips, a single-bladed rear sight rather than multiple-blade, and blued rather than case-hardened hammer. Outside this range, only 19288 has the 2" marking; and number 19692 is marked 2-1/2". No Model 1921 Game Getters are known to have been factory chambered for the 3" .410 shell.

The markings on the Model 1921 are:

LEFT SIDE:
Marble'S
Game Getter Gun
Marble Arms & Mfg.Co.
Gladstone, Mich.U.S.A.
RIGHT SIDE: ***UPPER BARREL 22 S.L. LR.&N.R.A***
LOWER BARREL .44GG & .410 2"

OTHER CHARACTERISTICS: Other barrel markings for the Model 1921 in .410 are ***.410 2-1/2"*** and ***.410 2-1/2"***; the latter appears in the serial number range from approximately 15000 to 16600, and in the low 19000 range. Plastic grips were used in the serial range from approximately 14600 to 17000.

The Model 1921 was originally designed for the 2" .410 shotgun shell, but Marble's changed the extractor marking on some guns to **2-1/2"** or **2-1/2"** to indicate factory rechambering for the 2.5" shell, apparently on a random or special-order basis (both 2" and 2-1/2" marked guns have been observed in low (14000) and high (19000) serial number ranges). The lowest serial number with 2?" marking observed so far is 14601. The range from approximately 14500 to 17000 have plastic rather than walnut grips, single-bladed rear sight rather than multiple-blades, and blued rather than case hardened hammer. Outside this range, only 19288 has the 2?" marking; number 19692 is marked **2-1/2**". No Model 1921 Game Getters are known to have been factory chambered for the 3" .410 shell.

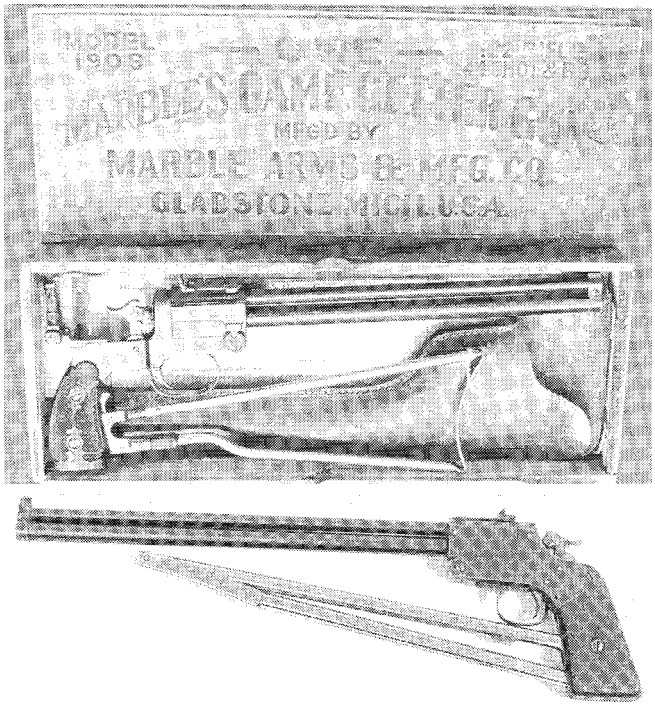
Marble's Game Getter Pistol and other special-order or experimental Game Getters NFA, CURIO OR RELIC

Contemporary articles and advertisements in *Hunter-Trader-Trapper*, and some early Marble's catalogs, state that a small number of Model 1908 Game Getters were originally manufactured (with rifled barrels) for .25-20, .32-20, and.38-40 cartridges. An illustrated advertisement in a 1910 issue of *Hunter-Trapper-Trader* states that 12", 15" and 18" barrel Game Get-

ters were available for delivery in .25-20, .32-20 and .38-40, and that these firearms were designed as over-and-under rifles with rifled barrels. An article in the October 1913 issue of *Outdoor Life* states that Marble's was manufacturing a Game Getter pistol, with 10" barrels, and that any barrel length could be ordered.

Original factory records have confirmed the manufacture of the foregoing Game Getters, and clarified their designs. All original guns are thus correctly classified as experimental or special-order guns, and all are extremely rare. Factory records disclose that about 20 each of the Model 1908 were manufactured with .22/25-20 and .22/.32-20 over-and-under rifled barrels, but the barrel lengths are not specified. No .22/.38-40 Model 1908 Game Getters are listed in the factory records, but that may not have precluded a later factory alteration to that configuration. It is important to note that any Model 1908 Game Getter with over-and-under rifled barrels less than 18" in length is currently subject to registration under the NFA as a short barreled rifle, with a $200 transfer tax. Under current law, if these firearms are not registered they are contraband and cannot be legally owned unless ATF administratively removes them from the NFA as collector's items.

Factory records disclose that eight Model 1908 Game Getter pistols were manufactured, and all were shipped to a Minneapolis hardware store. Two specimens have been located: serial number 3810, with a 8" .22/.44 smooth bore barrel, and serial number 3837, with a 10" .22/.44 smooth bore barrel. Inspection of serial numbers 3810 and 3837 (including removal of the grips) reveal they were never fitted with shoulder stocks, because the portion of the frame which would have accommodated the stock was never machined out to receive one. Under current law, an original Marble's Game Getter pistol is subject to registration under the NFA as an "Any Other Weapon" with a $5 transfer tax. According to very incomplete factory records, a relatively small number—about a dozen—Model 1921 Game Getters were manufactured with .22/.38-40 rifled barrels, but the barrel lengths are not specified. It is possible that other factory-original configurations exist, such as .22/.25-20 and others.



MARGOLIN

Tula, Soviet State Arsenal

Model MT Sports

This is a semi-automatic .22 caliber pistol with no barrel weights and is not threaded for a compensator. Barrel length is 7.5". Furnished with a black plastic case with spare magazine and repair parts. Discontinued.

MARLIN FIREARMS CO.

New Haven, Connecticut

NOTE: Marlin, along with its subsidiaries Harrington & Richardson/NEF, is now owned by Remington Arms.

Ballard Rifles

Established by John Mahlon Marlin in 1863. Marlin manufactured pistols until 1875 when he began production of Ballard rifles. In 1881 he made his first lever-action repeating rifle for which his company became famous.

The Marlin Firearms Company has the distinction of being the oldest family owned firearms company in the United States.

The Ballard single-shot rifle was invented by C.H. Ballard of Worcester, Massachusetts. It was patented in 1861. The first of the Ballard rifles was manufactured by the Ball and Williams Co. of Worchester, Massachusetts. In 1866 Merwin and Bray purchased the firm, calling it Merrimack Arms Company, and operated until 1869, when they sold it to the Brown Manufacturing Company of New York City. This venture took a decidedly negative turn, and in 1873 mortgage foreclosure forced the sale to Schoverling and Daly of New York City. These gentlemen were arms dealers, not manufacturers, so they entered into an agreement with John M. Marlin to produce the Ballard rifle. The rifles produced during this period are regarded as some of the finest single-shots ever made, and the venture finally became successful. In 1881 the business became incorporated as the Marlin Firearms Company, and the Ballard was produced under this banner until it was discontinued around the year 1891. The popularity of the repeating rifle simply eroded the demand for the fine single-shot until it was no longer a profitable venture.

BALL & WILLIAMS BALLARDS

First Model

This model was the first Ballard produced. It was introduced in 1861 and was offered with a 24" or 28" octagonal barrel. The frame is case colored, and the barrel is blued. The walnut stock is varnished. The major identifying feature of this model is the inside extractor. This was the only Ballard that had this feature before Marlin began to manufacture the rifle in 1875. The barrel is stamped "Ball & Williams/Worchester, Mass." and "Ballards Patent/Nov. 5, 1861." There were approximately 100 manufactured and serial numbered from 1-100.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	2500	900	400

Military Rifle

There is not enough known about these rifles and probably never will be. They were chambered most frequently for the .44 and .54 rimfire cartridges and feature the outside tangs and extractors. They were offered with a 30" round barrel and full-length forearm. There are three barrel bands and sling swivels. The government ordered only 35 of these for use in the Civil War; and if one was to be definitely authenticated as a genuine martial specimen, it would be quite valuable. Many of these rifles were marked "Kentucky" on top of the receiver because the militia of that state armed its men with the Ballard rifles and carbines. This marking was a sales aid used by the company and does not indicate militia ownership. The amount manufactured is not known. Barrel markings are as on the First Model.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1850	750	300

Civil War Military Carbine

This model has a 22" part-round, part-octagonal barrel and is chambered for the .44 rimfire cartridge. It has the outside tang and extractor. The stock and forearm are walnut with a barrel band sling swivel. The buttstock bears an oval cartouche surrounding the inspector's marks, "MM." These letters also appear stamped on major metal parts. There were 1,509 ordered by the government for use in the Civil War. The barrel was marked the same as the rifle.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	3750	1500	500

Sporting Rifle

This model is chambered for the .32, .38, and .44 rimfire cartridges. The octagonal barrel is 24", 26", or 28" in length and is blued. The frame is case colored. The stock and forearm are varnished walnut, and there is a knob that protrudes in front of the frame to operate the outside manual extractor. There is a crescent buttplate standard. There were approximately 6,500 manufactured, and barrel markings are the same as on the First Model.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	—	1250	500	200

Sporting Carbine

This model is similar in appearance to the Sporting Rifle with a 22" part-round, part-octagonal barrel. It is chambered for the .44 and .54 caliber cartridge, and the sling swivel is found on a barrel band in the front. The knob on the bottom activates the outside extractor. There have been some encountered with "Kentucky" stamped on the top, but this does not affect the value. The markings are the same as on the previous models. There are no production figures available, but some estimate approximately 2,000 were manufactured.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	600	250

Dual Ignition System

This system allows the use of the rimfire cartridge or percussion method by simply turning the striker on the hammer from one position to the other. This model features a percussion nipple mounted on the breechblock, and the hammer is marked "Patented Jan. 5, 1864." The patent was held by Merwin and Bray. This swivel system is usually found on the sporting models and would increase the value of the weapon by 20 percent.

MERRIMACK ARMS CO. AND BROWN MANUFACTURING CO.

The values for the Ballard rifles manufactured by these two firms are the same, and the specifications are similar. The identifying difference is in the markings, "Merrimack Arms & Mfg. Co./Newburyport Mass." or "Brown Mfg. Co. Newburyport, Mass." Merrimack produced approximately 3,000 of these rifles between 1867 and 1869 serial numbered in the 18000-20000 range. Brown produced approximately 1,800 between 1869 and 1873 in the 20000-22000 serial number range.

Sporting Rifle

This model was produced in .22 (rare), .32, .38, .44, .46, and .52 caliber rimfire or percussion, as most encountered featured the dual ignition system and had the nipple in the breechblock. They have either a round or octagonal barrel in 24", 26", or 28" lengths. The appearance and finish is similar to the Ball & Williams rifles; and the major difference is the inside tang. The extractor was still outside mounted and manually activated. Exact production breakdown is unknown. There is no premium for the dual ignition system on these later guns.

Exc.	V.G.	Good	Fair	Poor
—	—	1150	450	200

Sporting Carbine

This model is quite similar in appearance to the Sporting Rifle, with a 22" part-round, part-octagonal barrel.

Exc.	V.G.	Good	Fair	Poor
—	—	1250	550	300

Military Rifle

The Military Rifle is similar to the sporting version except that it has a 30" round barrel and full-length forearm with three barrel bands. It is chambered for the .44 and .52 caliber rimfire or percussion with the dual ignition system.

Exc.	V.G.	Good	Fair	Poor
—	—	1500	650	300

Shotgun

This model is similar to the Sporting Rifle in appearance but is chambered for 24 gauge, with a 30" round barrel. There is a groove milled in the top of the frame to use as a sight. The buttplate is shotgun-style instead of the usual crescent shape.

Exc.	V.G.	Good	Fair	Poor
—	—	800	350	200

MARLIN-BALLARD RIFLES

Commencing in 1875 the Ballard single-shot rifle was made by John Marlin for Schoverling and Daly. In 1881 the business was incorporated and became the Marlin Firearms Co. All the Ballards made from then until 1891, when they were discontinued, were produced under this banner. The only real difference in the rifles manufactured during these periods was in the markings. The earlier rifles are stamped "J.M. Marlin New Haven. Conn. U.S.A./Ballards Patent. Nov. 5, 1861"; and the post-1881 models are stamped "Marlin Firearms Co. New Haven Ct. U.S.A./Patented Feb. 9, 1875/Ballards Patent Nov. 5, 1861." The major difference between Marlin-made Ballards and the earlier models is the inside tang and the internal extractor on the Marlin-made rifles. All of the Marlin-made Ballards have an octagonal frame top, and the Marlin Firearms Co. models have grooved receiver sides. The standard finish on all these later rifles is case colored frames and blued octagonal or part-round, part-octagonal barrels. There are many variations in these rifles as to types of sights, stock, engraving, and other special order features-such as barrel lengths, weights, and contours. These rifles must be considered individually and competently appraised. There is also the fact that many of these Ballards have been rebarreled and rechambered over the years, as they were known for their shooting ability and were used quite extensively. This can seriously affect the value in a negative manner unless it can be authenticated that the work was done by the likes of Harry Pope or George Schoyen and other noted and respected gunsmiths of that era. This can add considerably to the value of the rifle. One must approach this model with caution and learn all that can be learned before purchasing.

Ballard Hunters Rifle

This model resembles the earlier Brown Manufacturing Company rifles, and it utilizes many leftover parts acquired by Marlin. It is chambered for the .32, .38, and .44 rimfire and centerfire and features John Marlin's unique reversible firing pin that allows the same gun to use both rimfire and centerfire ammunition simply by rotating the firing pin in the breechblock. This model still had the external ejector and bears the J.M. Marlin markings. There were approximately 500 manufactured in the 1 to 500 serial range. They were produced in 1875 and 1876.

Exc.	V.G.	Good	Fair	Poor
—	—	2750	950	400

Ballard No. 1 Hunters Rifle

This model bears the early J.M. Marlin marking only, as it was manufactured from 1876 until 1880 and was discontinued before the incorporation. It has a 26", 28", and 30" barrel and is chambered for the .44 rimfire or centerfire cartridge. It has the reversible firing pin and also the new internal extractor. Production figures are not available, but the serial number range is between 500 and 4000.

Exc.	V.G.	Good	Fair	Poor
—	—	3000	1000	400

Ballard No. 1-1/2 Hunters Rifle

This model is similar to the No. 1 except that it is chambered for the .45-70, .40-63, and the .40-65 cartridges and does not have the reversible firing pin. The barrel length is 30" and 32". It was manufactured between 1879 and 1883. This model is found with both early and later markings.

—	—	2000	650	200

Ballard No. 3 Gallery Rifle

This model is similar to the No. 2 rifle but is chambered for the .22 rimfire cartridge and has a manually operated external extractor. The sights are the same; and a 24" barrel was offered in addition to the 26", 28", and 30". This rifle was manufactured between 1876 and 1891.

Exc.	V.G.	Good	Fair	Poor
—	—	2000	650	200

Ballard No. 3F Gallery Rifle

This is a deluxe version of the No. 3. It has a pistol-grip stock, a nickel-plated Schutzen-style buttplate, and an opening lever like a repeating rifle. It features a 26" octagonal barrel and an oil-finished stock. It was manufactured in the late 1880s and is quite scarce in today's market.

—	—	4250	1750	500

Ballard No. 4-1/2 Mid Range Rifle

This model is also a variation of the No. 4 Perfection model. It has a higher-grade checkered stock with a shotgun buttplate. It has a 30" part-round, part-octagonal barrel and is chambered for the .38-40, .40-65, and the .45-70 cartridges. It features a Vernier tang peep sight and a globe front sight. It was manufactured between 1878 and 1882.

—	—	4500	2000	500

Ballard No. 4-1/2 A-1 Mid Range Target Rifle

This is a deluxe version of the No. 4-1/2" rifle. It features scroll engraving on the frame with "Ballard A-1" on the left and "Mid-Range" on the right. It is chambered for the .38-50 and the .40-65 cartridge and has a high-grade checkered stock with a horn forend tip. The sights are the highest-grade Vernier tang sight and a spirit lever front sight. The shotgun or rifle-style butt was optional. This model was manufactured between 1878 and 1880.

Ballard No. 6 Schuetzen Off Hand Rifle

This model has a 30" or 32" octagonal barrel and is chambered for the .40-65, .44-75, and the .38-50 cartridges. The stock is of select walnut in the high-combed Schuetzen style. The buttplate is nickel-plated, and the receiver is not engraved. The sights are Vernier tang type on the rear and a spirit lever front. The triggers are double set, and the opening lever has a ring and a spur. This model is marked J.M. Marlin only and was manufactured between 1876 and 1880.

Ballard No. 7 "Creedmore A-1" Long Range Rifle

This model is commonly chambered for the .44-100 or the .45100 cartridges. It has a 34" part-round, part-octagonal barrel and a high grade checkered pistol-grip stock, with a horn forend tip and shotgun-style butt. The sights are a special 1,300-yard Vernier tang rear and a spirit level front. There is another sight base on the heel of the stock for mounting the rear sight for ultra long-range shooting. The opening lever is similar to a repeating rifle, and a single trigger is featured. The receiver is engraved and marked "Ballard A-1" on the left and "Long Range" on the right. This model was manufactured between 1876 and 1886 and is found with both early and late markings.

Ballard No. 8 Union Hill Rifle

This model has a 28" and 30" part-round, part-octagonal barrel and is chambered for the .32-40 and the .38-55 cartridges. It has a checkered pistol-grip stock with nickel-plated buttplate; and the opening lever is fully enclosed ring, as on the repeaters. There is a double-set trigger and a tang peep with globe front sight. The receiver is not engraved. This model was manufactured between 1884 and 1890 and is found only with the late markings. This was one of the most popular rifles in the Ballard line.

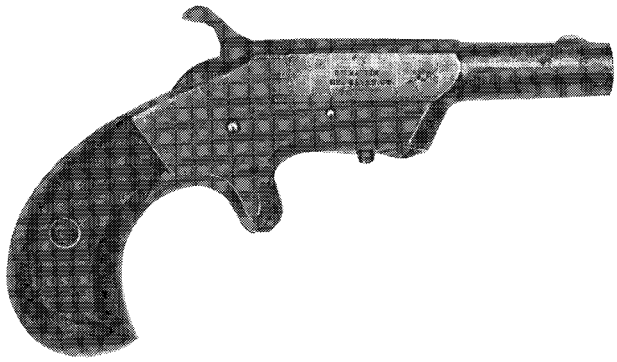
MARLIN HANDGUNS

The first firearm that was manufactured by John M. Marlin was actually a derringer-type single-shot that was small enough to be hidden in the palm of the hand. From this beginning evolved the company that became known for its highly accurate and dependable rifles. The Marlin Company manufactured handguns up to the turn of the century, discontinuing their last and only double-action model in 1899.

1st Model Derringer

This was the first handgun produced by Marlin. The barrel is 2-1/16" long and pivots to the side for loading. There is a plunger under the frame that is depressed to free the barrel. This device is a Ballard patent. This pistol is chambered for the .22 rimfire cartridge, and there is no extractor. The frame is brass and usually nickel-plated. It has two grooves milled beneath the blued barrel. The grips are of rosewood. The barrel is stamped "J.M. Marlin, New Haven, Ct." There were approximately 2,000 manufactured between 1863 and 1867. They are quite scarce on today's market.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	750	300	100

Victor Model Derringer

This model is similar in appearance to the "O.K." Model but is larger in size and is chambered for the .38-caliber rimfire cartridge. The barrel is 2-11/16" long; and there was, for the first time, an extractor. The finish and function were unchanged. The right side of the barrel is stamped "J.M. Marlin/New Haven, Ct./Pat. April 5.1870." "Victor" is stamped on the top of the barrel. There were approximately 4,000 manufactured between 1870 and 1881.

—	—	1250	500	150

O.K. Model Derringer

The O.K. Model is chambered for .22, .30, and .32 rimfire cartridges. The barrel is 2-1/8" or 3-1/8" on the .32. There is no extractor, and it functions as the 1st Model. The frame is plated brass with flat sides, and the barrel is found either blued or nickel-plated. The grips are rosewood. The markings are the same as on the 1st Model but are located on the right side of the barrel. The top of the barrel is marked "O.K." There were approximately 5,000 manufactured between 1863 and 1870.

—	—	750	300	100

Nevermiss Model Derringer

This model was made in three different sizes chambered for the .22, .32, and .41 rimfire cartridges. The barrel is 2.5" long and swings sideways for loading. The frame is plated brass,

and the barrels are either blued or nickel-plated. The grips are rosewood. The frame is grooved under the barrels as on the 1st model. There is an extractor on this model. The barrel markings are the same as on the "Victor," with the top of the barrel marked "Nevermiss." There were approximately 5,000 manufactured between 1870 and 1881.

O.K. Pocket Revolver

This is a solid-frame, spur-trigger, single-action revolver chambered for the .22 rimfire short. The round barrel is 2.25", and the 7-shot cylinder is unfluted. The frame is nickel-plated brass with a blue or nickel-plated barrel, and the bird's-head grips are rosewood. The cylinder pin is removable and is used to knock the empty cases out of the cylinder. The top of the barrel is marked "O.K." and "J.M. Marlin. New Haven, Conn. U.S.A." There were approximately 1,500 manufactured between 1870 and 1875.

J. M. MARLIN STANDARD POCKET REVOLVERS

In 1872 Marlin began production of its Smith & Wesson look-alike. The Manhattan Firearms Company had developed a copy of the Model 1 S&W .22 cartridge revolver. In 1868 the company ceased business, and the revolvers were produced by the American Standard Tool Company until their dissolution in 1873. In 1872 Marlin had entered into an agreement with this company to manufacture these revolvers, which were no longer protected by the Rollin White patent after 1869. The Marlin revolvers are similar to those made by American Standard, the only real difference being that Marlin grips are of the bird's-head round configuration. A contoured grip frame and a patented pawl spring mechanism is utilized on the Marlin revolvers.

Marlin XXX Standard 1872 Pocket Revolver

This is the first in the series of four Standard model revolvers. It is chambered for the .30 caliber rimfire. The earlier model has an octagonal 3-1/8" barrel; and the later, a round 3" barrel. There are round and octagonal barrel variations (with unfluted cylinder) and round barrel variations (with short and long fluted cylinders). All of the barrels are ribbed and tip up for loading. They have plated brass frames, and the barrels are nickel-plated. The bird's-head grips are of rosewood or hard rubber, bearing the monogram "M.F.A. Co." inside a star. There is a spur trigger. The markings "J.M. Marlin-New Haven Ct." appear on the earlier octagonal barreled models. "U.S.A. Pat. July 1. 1873" was added to the later round barreled models. All barrels are marked "XXX Standard 1872." There were approximately 5,000 of all types manufactured between 1872 and 1887.

Marlin XX Standard 1873 Pocket Revolver

This model is similar in appearance to the XXX 1872 model except that it is chambered for the .22 long rimfire and is marked "XX Standard 1873." There are three basic variations: the early octagonal barrel model with non-fluted cylinder, the round barrel model with non-fluted cylinder, and the round barrel with fluted cylinder. Function and features are the same as described for the "XXX Standard 1872" model. There were approximately 5,000 manufactured between 1873 and 1887.

Marlin No. 32 Standard 1875 Pocket Revolver

This model is also similar in appearance to the "XXX Standard 1872" model except that it is chambered for the .32 rimfire car-

tridge. The 3" barrel is round with a rib, and the 5-shot cylinder is fluted and is in two different lengths to accommodate either the .32 Short or Long cartridge. The finish, function, and most markings are the same as on previous models with the exception of the barrel top marking "No. 32 Standard 1875." There were approximately 8,000 manufactured between 1875 and 1887.

Marlin 38 Standard 1878 Pocket Revolver

This model is different than its predecessors in that it features a steel frame and flat bottom butt, with hard rubber monogram grips. There was still a spur trigger, and the 3.25" ribbed round barrel still tipped up for loading. This model is chambered for the .38 centerfire cartridge. The finish is full nickel plate, and the top of the barrel is marked "38 Standard 1878." There were approximately 9,000 manufactured between 1878 and 1887.

Marlin 1887 Double-Action Revolver

This is the last handgun that Marlin produced and the only double-action. It is chambered for the .32 or the .38 caliber centerfire cartridges and is of the break-open auto-ejector type. The fluted cylinder holds 6 shots in .32 and 5 shots in .38 caliber. The round ribbed barrel is 3.25" in length, and the frame is made of steel. The standard finish is nickel-plated with a blued trigger guard. Many full-blued examples have been noted. The round butt grips are hard rubber, and the top of the barrel is marked "Marlin Firearms Co. New Haven Conn. U.S.A./Patented Aug. 9 1887." There were approximately 15,000 manufactured between 1887 and 1899.

EARLY PRODUCTION MARLIN RIFLES

Model 1881 Lever-Action Rifle

This was the first of the Marlin lever-action rifles and has always been regarded as a high quality rifle. It is capable of handling the large calibers and was well received by the shooting public. The rifle is chambered for the .32-40, .38-55, .40-60, .45-70, and the .45-85. The 24", 28", or 30" octagonal barrel is standard. Round barrels were offered and are scarce today. There is a tubular magazine beneath the barrel, and the rear sight is the buckhorn type with a blade on the front. This model ejects its empty cartridges from the top. The finish is blued, with a case colored hammer, lever, and buttplate. The walnut stock is varnished. There were approximately 20,000 manufactured between 1881 and 1892 but this is not easy to ascertain, as the factory records on Marlin rifles are quite incomplete.

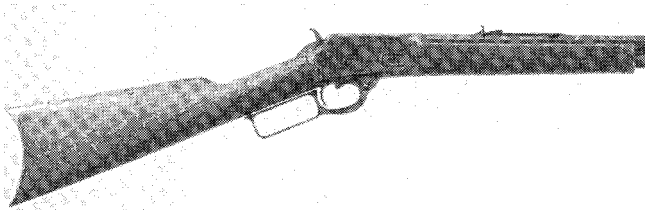
—	3000	1750	600	300

NOTE: Add 200-300 percent premium for 1st Models prior to serial number 600. Add 15 percent premium for .45-70 caliber.

Model 1888 Lever-Action Rifle

This model is chambered for the .32-20, .38-40, and the .44-40 cartridges. This is a shorter action that was designed (chiefly by Lewis Hepburn) to handle the pistol cartridges for which it was chambered. The standard barrel was octagonal, but round barrels were available as special-order items. This is a top ejecting action. It has a buckhorn rear and a blade front sight. The finish is blued with a case colored hammer, lever, and buttplate. The walnut stock is varnished. There were approximately 4,800 manufactured in 1888 and 1889. As with most of these fine old rifles, many special-order options were available that affect today's market value. Individual appraisal would be necessary for these special models, to ascertain both value and authenticity.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	3500	2500	600	350

NOTE: Add 40 percent premium for half octagon barrel. Add 20 percent premium for round barrel.

Model 1889 Lever-Action Rifle

This was Marlin's first side-eject, solid-top rifle. It is chambered for .25-20, .32-20, .38-40, and the .44-40 cartridges. It features either octagonal or round barrels in lengths from 24" to 32" with buckhorn rear and blade front sights. The finish is blued with a case colored hammer, lever, and buttplate. The plain walnut stock is varnished. The barrel is stamped "Marlin Fire-Arms Co. New Haven Ct. U.S.A./Patented Oct.11 1887 April 2.1889." This model features a lever latch, and many options were offered. Again one must urge individual appraisal on such variations. Values fluctuate greatly due to some seemingly insignificant variation. There were approximately 55,000 manufactured between 1889 and 1899.

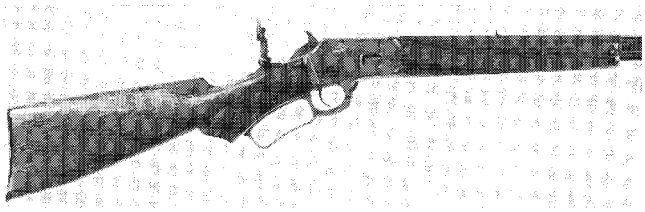
Model 1891 Lever-Action Rifle

This was Marlin's first rifle designed to fire the .22 rimfire and the first repeating rifle to accept the .22 Short, Long, and LR cartridges interchangeably. It was also chambered for the .32 rimfire and centerfire. The 24" octagonal barrel is standard, with a buckhorn rear and blade front sight. The finish is blued with a case colored hammer, lever, and buttplate. The stock is plain walnut. The first variation is marked "Marlin Fire-Arms Co. New Haven, Ct. U.S.A./Pat'd Nov.19.1878.April 2.1889. Aug.12 1890" on the barrel, with the solid-topped frame marked "Marlin Safety." The second variation was marked the same with "March 1,1892" added. There were approximately 18,650 manufactured between 1891 and 1897.



1st Variation

NOTE: Add 20 percent for .22 rifle with "1891" stamped on tang. Deduct 50 percent for .32 caliber.

Model 1892 Lever-Action Rifle

This is basically an improved version of the Model 1891 and is similar to the second variation of the 1891. The only notable exceptions were the tang marking "Model 1892" and "Model 92" on later models. The .22 rimfire was scarce in the Model 1892. There were approximately 45,000 manufactured between 1895 and 1916. There were many options, and these special-order guns must be individually appraised to ascertain value and authenticity.

.32 Rimfire and Centerfire

Exc.	V.G.	Good	Fair	Poor
—	850	350	150	100

Model 1893 Lever-Action Rifle

This model was the first rifle Marlin designed for the then new smokeless powder cartridges. It is chambered for the .25-36, .30-30, .32 Special, .32-40, and the .38-55. It was offered standard with either a round or octagonal barrel, in lengths of 24" to 32". Buckhorn rear and blade front sights were also standard. The receiver, lever, hammer, and buttplate are case colored, and the rest is blued. The stock is varnished walnut.

As with all of these early Marlins, many options were offered and, when encountered, will drastically alter the value of the particular rifle. For this reason we supply the values for the basic model and urge securing competent appraisal on non-standard specimens. The barrel on earlier guns is marked "Marlin FireArms Co. New Haven, Ct.U.S.A./ Patented Oct.11. 1887.April 2.1889.Aug.1.1893." In 1919 the markings were changed to "The Marlin Firearms Corporation/ New Haven, Conn.U.S.A.Patented." The rifles manufactured after 1904 are marked "Special Smokeless Steel" on the left side of the barrel. The upper tang is marked "Model 1893" on early guns; and "Model 93," on later specimens. There were approximately 900,000 manufactured between 1893 and 1935. Factory records are incomplete on the Model 1893.

Model 1894 Lever-Action Rifle

This model is similar to the Model 1893, with a shorter action. It is chambered for the .25-20, .32-20, .38-40, and the .44-40. 24" to 32" round or octagonal barrels with full-length magazine tubes are standard, as are buckhorn rear and blade front sights. The finish is case colored receiver, lever, hammer, and buttplate, with the rest blued. The walnut stock is varnished. The first versions were marked "Marlin Fire-Arms Co., New Haven, Ct.U.S.A./Patented Oct.11, 1887. April 2,1889." The top of the frame is marked "Marlin Safety," and the model designation is not stamped on the tang. These early rifles were chambered for .38-40 and .44-40 only. The later rifles added the patent date "Aug. 1, 1893"; and "Model 1894" was stamped on the tang. On the latest versions this was shortened to "Model 94." There were approximately 250,000 manufactured between 1894 and 1935. This model was also produced with a great many options. Individual appraisal should be secured when confronted with these features.

Model 1895 Lever-Action Rifle

This is a large rifle designed to fire the larger hunting cartridges. It is chambered for the .33 W.C.F., .38-56, .40-65, .40-70, .40-83, .45-70, and the .45-90. It came standard with round or octagonal barrels from 26" to 32" in length. A bull-length magazine tube was also standard, as were buckhorn rear and blade front sights. The finish is case colored receiver, lever, and hammer; the rest is blued with a varnished walnut stock. The barrel markings are the same as the Model 1894, and the top tang is marked "Model 1895." After 1896 "Special Smokeless Steel" was stamped on the barrel. There were also many options available for this model, and they have a big effect on the value. There were approximately 18,000 manufactured between 1895 and 1917.

Model 1897 Lever-Action Rifle

This model is an improved version of the Model 1892. It was chambered for the .22 rimfire only and came standard with a

24", 26", or 28" round, octagonal, or part-round, part-octagonal barrel. The standard sights are buckhorn rear and blade front, and all were manufactured as takedown rifles. They have case colored receiver, lever, and hammer. The rest is blued, and the walnut stock is varnished. There were approximately 125,000 manufactured between 1897 and 1917. In 1922 production was begun with the designation changed to Model 39 which is produced to this day. There were also options offered with this rifle that have great effect on the value; take this into consideration and seek qualified appraisal.

MODERN PRODUCTION MARLIN RIFLES

Model 18 Slide-Action Rifle

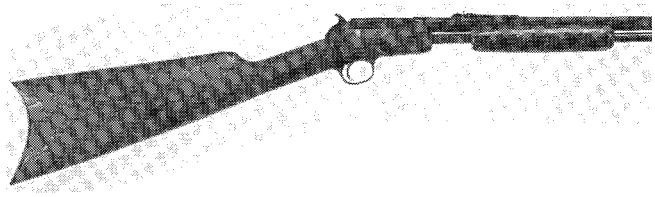
This model is chambered for the .22 rimfire cartridges. It was offered standard with a 20" round or octagonal barrel, open sights, and a straight walnut stock. It has an exposed hammer and blued finish with blued steel buttplate. There is a half-length tubular magazine, and the stock features a quick takedown screw on the top tang which was marked "Model 18." This rifle was manufactured between 1906 and 1909.

Photo by Lt. Col. William S. Brophy from Marlin Firearms with permission

Exc.	V.G.	Good	Fair	Poor
500	350	200	150	80

Model 20 Slide-Action Rifle

The Model 20 was chambered for the .22 rimfire cartridges and was offered standard with a 24" octagonal barrel and open sight, with an exposed hammer. This rifle was only made as a "Takedown" receiver model and is blued, with a straight walnut stock. It was manufactured between 1907 and 1922.



Exc.	V.G.	Good	Fair	Poor
425	325	200	125	75

Model 25 Slide-Action Rifle

This model was chambered for the .22 Short only and was not a commercial success. The 23" round or octagonal barrel is standard, as are open sights. It is called a takedown model, but only the stock is removable—the receiver does not separate. It has an exposed hammer, tubular magazine, and straight walnut stock. The finish is blued. This rifle was manufactured in 1909 and 1910.

Photo by Lt. Col. William S. Brophy from Marlin Firearms with permission

Exc.	V.G.	Good	Fair	Poor
425	325	175	120	75

Model 27 Slide-Action Rifle

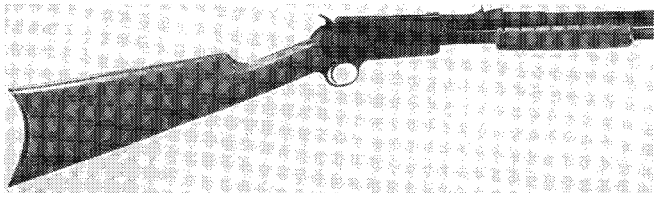
This is a centerfire rifle chambered for the .25-20 and .32-20 cartridges. Also chambered for the .25 caliber rimfire cartridge. It features a 24" octagonal barrel with two-thirds-length magazine tube that holds 7 shots. It has open sights, a blued finish, and straight walnut stock with crescent buttplate. It was manufactured in from 1910 to 1916.

Exc.	V.G.	Good	Fair	Poor
500	400	275	175	100

NOTE: Deduct 20 percent for rifles chambered for the .25 rimfire.

Model 27S Slide-Action Rifle

The Model 27S is similar to the Model 27 but with a sliding button on the right side of the receiver that permitted the gun to be opened while a cartridge was in the chamber. It was offered with a round (1913) or octagonal 24" barrel. The .25 rimfire cartridge was added in 1913 to those already available. This model was introduced in 1910 and was manufactured until 1932.



Exc.	V.G.	Good	Fair	Poor
375	300	175	100	70

Model 29 Slide-Action Rifle

This model is identical to the Model 20 with a 23" round barrel and smooth walnut forend instead of a grooved one as found on the Model 20. It was manufactured between 1913 and 1916.

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

Exc.	V.G.	Good	Fair	Poor
375	300	185	120	80

Model 32 Slide-Action Rifle

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

This model was the first of the hammerless slide-action rifles. It is chambered for the .22 rimfire and has a 24" octagonal barrel and half-length magazine tube. The Model 32 is a takedown rifle with adjustable sights and features "Ballard" rifling. It is blued, with a pistol-grip walnut stock. The advent of WWI and the need for Marlin to produce military arms cut short the production of this model. It was manufactured in 1914 and 1915 only.

Exc.	V.G.	Good	Fair	Poor
600	425	275	150	100

Model 37 Slide-Action Rifle

This model is the same as the Model 29 with a 24" round barrel and full-length magazine tube. It was manufactured between 1913 and 1916.

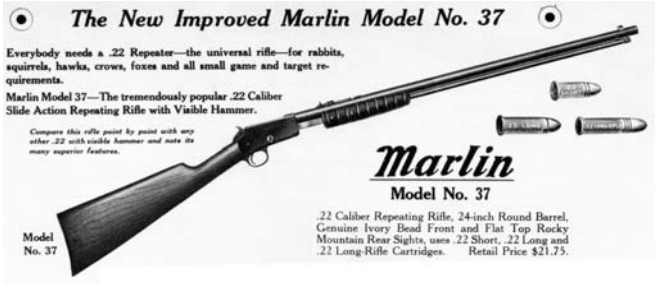


Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

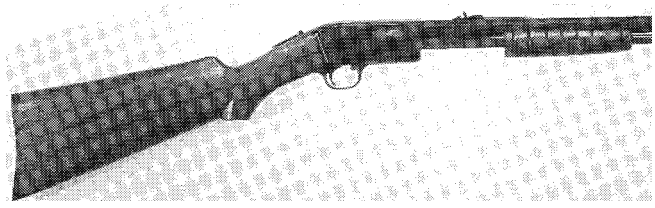
Exc.	V.G.	Good	Fair	Poor
350	300	250	150	100

Model 38 Slide-Action Rifle

This was the hammerless model introduced after the end of WWI to replace the Model 32. It is similar in appearance but features a Rocky Mountain adjustable rear and an ivory bead front sight instead of the distinctive round Swebilius sight on the Model 32. The Model 38 was manufactured between 1920 and 1930.



Exc.	V.G.	Good	Fair	Poor
500	400	300	175	115

Model 40 Slide-Action Rifle

This model is identical to the Model 27S centerfire rifle except that the barrel is marked "Marlin-Rockwell." The top tang is stamped "Marlin/Mod. 40." This is a rare model, and not many marked in this manner have been noted.

Exc.	V.G.	Good	Fair	Poor
700	575	375	225	150

Model 47 Slide-Action Rifle

This model is similar to the Model 20, with a 23" round barrel and an improved magazine tube. The Model 47 has a case colored receiver and a checkered buttstock. This model was not offered for sale nor was it listed in Marlin's catalog but was offered free of charge to anyone purchasing four shares of Marlin stock for $100. One other fact about this model is that it was the first Marlin to be case colored with the new cyanide method; this created a tiger-striped pattern that is peculiar to the Model 47 Rifle.

Exc.	V.G.	Good	Fair	Poor
750	600	400	250	160

Model 1936 Lever-Action Rifle or Carbine

This model is a direct descendant of the Model 1893. It is chambered for the .30-30 and the .32 Special cartridge. The stock is streamlined with a pistol grip added and a 20" round barrel. A barrel band and improved sights are utilized. It has a 7-shot tube magazine and a semi-beavertail forearm. The receiver, lever, and hammer are case colored; and the rest is blued. This model was manufactured between 1936 and 1948. It was designated the Model 36 in 1937.

1st Variation (early 1936)

This variation has a slight "fish-belly" forearm, long tang, case colored receiver, lever, and hammer, with no serial number prefix. These are rare.

Exc.	V.G.	Good	Fair	Poor
1200	850	400	175	125

2nd Variation (late 1936-1947)

This variation has thicker forearm, short tang, and "B" serial number prefix.

600	400	300	175	100

Model 36 Sporting Carbine

This model is similar to the 1936 Carbine, with a 20" barrel. It features a two-thirds-length magazine tube and holds 6 shots instead of 7. The front sight is a ramp sight with hood.

Exc.	V.G.	Good	Fair	Poor
800	600	400	195	125

Model 36A-DL Lever-Action Rifle

This model is similar to the Model 36A, with a deluxe checkered stock. It features sight swivels and is furnished with a leather sling.

Exc.	V.G.	Good	Fair	Poor
800	650	400	225	150

NOTE: Beginning in the 1980s, Marlin used the "S" suffix on its model numbers (e.g., 336CS, 1895S, etc.), to designate models with the new crossbolt safety. This suffix has now been dropped in most cases, even though the safety remains.

Model 336

Information and prices on the Model 336 were provided by Doug Murray, author and publisher of *The 336* (1983).

Model 336 Carbine (R.C. Regular Carbine)

This model was introduced in 1948 and was an improved version of the Model 36. It features a new-type round bolt, chrome-plated with improved extractor and redesigned cartridge carrier that improved feeding. It is chambered for the .30-30 and the .32 Special cartridges and has a 20" tapered round barrel with Ballard-type rifling. The finish is blued, with the receiver top matted to reduce reflections. The pistol-grip stock and semi-beavertail forend are of American walnut. It features Rocky Mountain-style rear and bead front sights, and the hammer is lowered to facilitate scope mounting.

Exc.	V.G.	Good	Fair	Poor
375	250	175	125	100

Model 336C

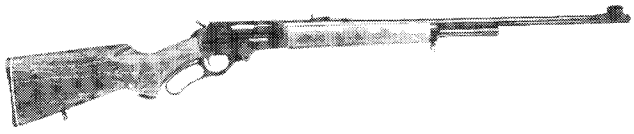
The same as the Model 336 Carbine. In 1951 the catalog model designation was changed. In 1952 the .35 Remington car-

tridge was added to the line. In 1963 the .32 Special was discontinued.

Exc.	V.G.	Good	Fair	Poor
375	250	175	125	100

Model 336A

This model is similar to the 336C, with a 24" barrel and steel forend tip instead of a barrel band. The magazine tube is two-thirds-length and holds 6 shots. This model was introduced in 1948 and built until 1962. It was reintroduced in 1973 and discontinued in 1980. In 1950 the .35 Rem. was introduced, and in 1960 the .32 Special was discontinued.



Exc.	V.G.	Good	Fair	Poor
350	275	200	150	125

Model 336ADL

This model differs from the Model 336A by having a deluxe wood checkered stock and forend, quick detachable swivels, better grade finish, and a sling.

Exc.	V.G.	Good	Fair	Poor

400	300	200	150	100

Model 336SD (Sporting Deluxe Carbine)

This is the 336 SC in a deluxe checkered stock version, with quick detachable swivels and supplied with a sling.

NOTE: This is a scarce model as only 4,392 were built.

Exc.	V.G.	Good	Fair	Poor
1000	750	400	200	125

Model 336 MicroGroove Zipper

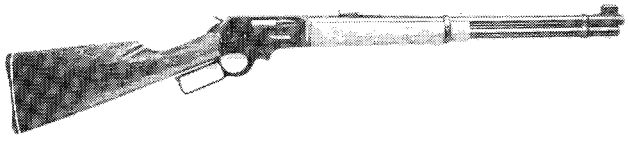
This model was advertised as a fast-handling, lever-action carbine chambered for the .219 Zipper cartridges flat trajectory, varmint-type round. It has a 20" heavy barrel, which was the feature that doomed it to failure as this was too short to coax the maximum performance and accuracy from the cartridge. The "MicroGroove" rifling that was used did not yield long barrel life; and the model survived from 1955 through 1959, when it was discontinued. It is externally similar to the 336 SC.

Exc.	V.G.	Good	Fair	Poor
900	550	350	200	150

NOTE: First few thousand zippers made in standard weight barrels, not heavy weight. These are scarce and found in the "M" prefix code number. Add 100 percent.

Model 336T (Texan)

This is a straight-stock version of the 336C, chambered for the .30-30 cartridge, with an 20" barrel. Also produced in .35 Rem. from 1953 to 1964, and .44 Mag. from 1965 to 1967. It was manufactured from 1953-1983.



Exc.	V.G.	Good	Fair	Poor
425	350	250	175	100

Model 336DT

A deluxe-stock version of the "Texan," with the map of Texas and a longhorn carved on the butt. It was manufactured between 1962 and 1964. Calibers are .30-30 and .35 Rem.

285	250	200	175	125	100

Model 375 Lever-Action

This model was introduced in 1980. It has a 20" MicroGroove barrel and is chambered for the .375 Winchester cartridge. This should have been a popular rifle; but perhaps because of difficulty in obtaining ammunition, it was not a commercial success. Its appearance is much the same as the Model 336, with walnut pistol stock and steel forend tip. This model was discontinued in 1983 after 16,315 were manufactured.

Exc.	V.G.	Good	Fair	Poor
475	350	300	175	100

Model 444 Lever-Action

This model was introduced in 1965. It is chambered for the .444 Marlin, a large and powerful cartridge that has the capability of dropping any game in North America, theoretically speaking. The rifle is essentially a Model 336 action modified to accept the larger cartridge. It has a 24" round barrel that was cut back to 22" in 1971. It holds 5 shots total and, when introduced, featured a straight-gripped Monte Carlo stock and semi-beavertail forend with barrel band. Another band holds the two-thirds-length magazine tube in place. In 1971 the stock was changed to a pistol grip without the Monte Carlo comb.

Model 1894 Lever-Action

The production of the Model 336 in .44 Magnum was a frustrating experience as the action was simply too long for a short pistol case. In 1969 Marlin reintroduced the Model 1894 chambered for the .44 Magnum cartridge. The barrel is 20", and the full-length magazine tube holds 10 rounds. It features an adjustable rear and a ramp-type front sight. The finish is blued, with a matted receiver top. The walnut stock has a straight grip; and the forend, a barrel band. From 1969 to 1971 there was a brass saddle ring.

NIB	Exc.	V.G.	Good	Fair	Poor
450	375	300	200	150	100

Model 1894 Octagon Barrel

This is basically the same as the Model 1894, with a 20" octagonal barrel and a steel forend tip instead of the barrel band. There were 2,957 manufactured in 1973 only.

Exc.	V.G.	Good	Fair	Poor
475	375	275	200	100

Model 1894 Sporter

This variation has a 20" round barrel, half-length magazine tube that holds 6 shots, and a hard rubber classic-style buttplate. Only 1,398 were manufactured in 1973.

560	450	—	—	—	—

Model 1894CS Lever-Action

This model is chambered for the .38 Special and .357 Magnum cartridges. It features an 18.5" round barrel, with full-length magazine tube and two barrel bands. It holds 9 shots and has a walnut straight-grip stock. This model was manufactured between 1969 and 1984. In 1984 a hammer-block crossbolt safety was added, and the model number was changed to 1894 CS. All other specifications remained the same. The Model is now known, again, as the Model 1894C.

Exc.	V.G.	Good	Fair	Poor
325	250	175	125	100

Model 1894M Lever-Action Rifle

This model is similar to the other 1894 rifles except that it is chambered for the .22 Magnum cartridge and features an outside loading tube magazine that holds 11 shots. The barrel is 20" long, and there is a steel forend tip instead of a barrel band.

NOTE: It is important to note that this model will not function properly with any cartridge except the .22 Magnum and that injury could result from attempting to chamber and fire the shorter .22 LR. This model was manufactured between 1983 and 1988 and was only produced with the crossbolt safety.

Exc.	V.G.	Good	Fair	Poor
375	325	275	200	100

Model 1894S Lever-Action Rifle

This model was introduced in 1984. It is chambered for the .41 Magnum and the .44 Special/.44 Magnum cartridges. In 1988 the .45 Colt chambering was offered. This model has a 20" barrel and a straight-grip stock. The forend has a steel cap. This model is currently produced and features the hammer-block safety.

625	525	—	—	—	—

Model 1895 and 1895SS Lever-Action

The model 1895 was reintroduced on the Model 336 action that had been modified to handle the .45-70 cartridge. This was done to capitalize on the nostalgia wave that descended on the country in the early 1970s. This model features a 22" round barrel with a two-thirds-length magazine tube that holds 4 shots. The walnut stock had a straight grip until the Model 1895 S was released in 1980, when a pistol-grip stock was used. In 1983 the Model 1895 SS with the crossbolt hammer-block safety was added; it is currently produced in this configuration.

Marlin Glenfield Lever-Action Rifles

The Glenfield line of rifles was designed to be sold in large outlet chain stores and were simply cheaper versions that were to be sold for less money. The rifles functioned fine, but birch was used instead of walnut and pressed checkering instead of handcut. These rifles were manufactured under the Glenfield name between 1964 and 1983. There are five models of Lever-Action Glenfields: the 36G, 30, 30A, 30 GT, and the 30 AS. They are chambered for the .30-30 cartridge, and the basic differences are slight and, in most cases, merely cosmetic. They are good, serviceable rifles but have little or no collector interest or investment potential.

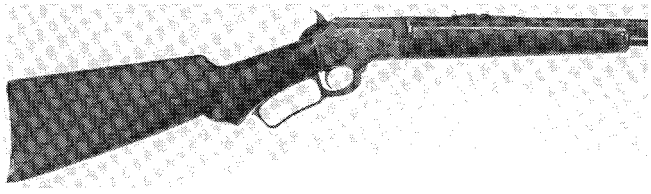
300	250	200	150	—	—

Model 39 Lever-Action Rifle

This model originally evolved from the Model 1891 invented by L.L. Hepburn. The 1891 rifle became the 1892 and eventually developed into the takedown Model 1897. The latter two were produced until 1915, when they were discontinued in favor of machine gun production for WWI. In 1922, when the company was sold to John Moran and became the Marlin Firearms Corp., the .22 rimfire lever-action was reintroduced as the Model 39. It has been in production in one form or another ever since.



Model 39

As it was introduced in 1922, the Model 39 was chambered for the .22 rimfire and had a 24" octagonal barrel and a takedown receiver. It has a full-length magazine tube which holds 25 Shorts, 20 Longs, or 18 LR cartridges. Most Model 39s had a spring-loaded button outer magazine tube release. Very early variations had the Model '97 type knurled latch release. As the Model 39As were being phased in around 1939 many have the more modern removable inner magazine tube. It has a solid top frame and side ejection, a Rocky Mountain rear, and ivory bead front sight. The receiver, lever, and hammer are case colored; the barrel is blued. The pistol-grip stock and steel-capped forearm are varnished walnut. This model was manufactured in this form between 1922 and 1938 with a number of options that could affect value and would warrant individual appraisal. Model 39s with a "star" stamped on the tang were considered high grade guns by the factory inspector and will command a premium in better condition examples.

NOTE: Model 39s made prior to 1932 that have either no prefix or the prefix S on the serial number should not be used with high-speed ammunition. The prefix HS indicates the improved bolt that is safe for this ammunition.

Standard Rifle

Exc.	V.G.	Good	Fair	Poor

1200	900	500	300	175	125

Model 39M Mountie 1960 Presentation Model

This is the carbine version of the 90th Anniversary model. This is the same as the 39A with a 20" barrel and straight-grip stock. There were 500 of this model manufactured in 1960.

NIB	Exc.	V.G.	Good	Fair	Poor
1200	900	500	300	175	125

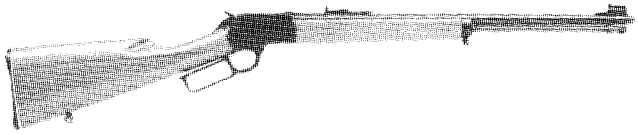
Model 39ADL Lever-Action Rifle

This model is the same as the 90th Anniversary issue except that it is blued instead of chrome-plated. There were 3,306 manufactured between 1960 and 1963.

NIB	Exc.	V.G.	Good	Fair	Poor
1000	850	500	300	175	125

Model Golden 39A Lever-Action Rifle

This model is similar to the 39A, with a gold-plated trigger and sling swivels. It was manufactured between 1960 and 1983.



Exc.	V.G.	Good	Fair	Poor
375	275	150	100	75

Model 39 Carbine

This is a slimmer, lighter version of the Model 39A. It features a slimmer forend and thinner barrel. There were 12,140 manufactured between 1963 and 1967.

Exc.	V.G.	Good	Fair	Poor
360	250	125	90	60

Model 39 Century Limited

The introduction of this model marked the 100th Anniversary of the Marlin Company. This model features a 20" octagonal barrel with semi-buckhorn rear and brass blade front sight. The stock is fancy walnut, with a straight grip and a brass forend tip and buttplate. There is a medallion inlaid into the right side of the receiver and a brass plate on the stock. There were 34,197 manufactured in 1970. As a commemorative this model needs to be as it came from the factory to command collector interest.

NIB	Exc.	V.G.	Good	Fair	Poor
950	550	300	150	125	100

Model 39A Article II

This model commemorated the National Rifle Association's 100th Anniversary in 1971. It has a 24" octagonal barrel, high grade walnut pistol-grip stock, and brass forend tip and buttplate. The right side of the receiver has the NRA's Second Amendment "Right to Keep and Bear Arms" medallion inlaid. Manufactured in 1971.

NIB	Exc.	V.G.	Good	Fair	Poor
750	450	300	150	125	100

Model 39M Article II

This model is the same as the Model 39A Article II except that it is a carbine version with a 20" octagonal barrel and a straight grip stock. There were 3,824 manufactured in 1971. As commemoratives NIB condition is essential to collector interest.

NIB	Exc.	V.G.	Good	Fair	Poor
775	475	325	175	150	100

Model 39A Octagon

This model was produced because the company had the machinery and some leftover barrels from the two commemorative models produced in 1970 and 1971. This was a regular production run that was meant to be used and was not a special issue. It has a 24", tapered octagonal barrel and is chambered for the .22 rimfire cartridges. It has a pistol-grip walnut stock, with steel forend tip. There were 2,551 manufactured in 1972 and 1973. This was not a commercially successful model, and it was discontinued for that reason.

NIB	Exc.	V.G.	Good	Fair	Poor
750	600	400	250	200	175

Model 39M Octagon

This is the 20", octagonal barreled carbine version with a straight-grip stock. There were 2,140 manufactured in 1973.

NIB	Exc.	V.G.	Good	Fair	Poor
750	600	400	250	200	175

Model 39D Lever-Action Rifle

This is essentially the Model 39M carbine, 20" barrel version with a pistol-grip stock. It was manufactured in 1971 and reintroduced in 1973.The 1971 version has white line spacers and pistol-grip caps. The 1973 version has neither of these features.

Exc.	V.G.	Good	Fair	Poor
325	250	125	75	50

Model 39AS Lever-Action Rifle

This is the current production model of this extremely popular .22 rifle. It features the hammer-block crossbolt safety and sling swivel studs. It is similar in appearance to its predecessors and still boasts a genuine walnut pistol-grip stock and the same quality fit and finish we have come to expect from Marlin.

Model 39AWL

This is a limited edition of 2,000 rifles distributed solely through Wal-Mart. Fitted with a 24.5" octagon barrel, select checkered walnut stock, gold filled engraving, and stamped "Wildlife For Tomorrow."

NIB	Exc.	V.G.	Good	Fair	Poor
700	500	—	—	—	—

Model 56 Levermatic Rifle

This is a streamlined version of the lever-action. It features a short lever throw and a one-piece walnut stock. The 22" barrel is round and is chambered for the .22 rimfire cartridges. There is a 7-shot detachable magazine, open sights, and a gold-plated trigger. The receiver on this model was made of aluminum

after 1956. There were 31,523 manufactured between 1955 and 1964.

Exc.	V.G.	Good	Fair	Poor
275	200	150	75	50

Model 56 "Clipper King" Levermatic

This is the same as the Model 56 except that it is specially packaged and comes with a 4X .22 scope. The name "Clipper King" is stamped on the barrel, and the buttplate is red hard rubber. There were only 152 of these manufactured in 1959.

Exc.	V.G.	Good	Fair	Poor
295	225	175	100	75

Model 57 Levermatic Rifle

This model is similar to the Model 56, with a tube magazine and Monte Carlo stock. In 1960 Marlin went back to a steel receiver on this model. There were 34,628 manufactured from 1959 to 1965.

Exc.	V.G.	Good	Fair	Poor
275	200	150	75	50

Model 57M Levermatic Rifle

This is the Model 57 chambered for the .22 Magnum cartridge. There were 66,889 manufactured between 1959 and 1969.

Exc.	V.G.	Good	Fair	Poor
300	230	180	100	75

Model 62 Levermatic Rifle

This model is similar in appearance to the Model 57 except that it is chambered for the centerfire .256 Magnum cartridge and has a 4-shot magazine. In 1966 the .30 carbine cartridge was added. This model has a 23" "MicroGroove" barrel with open sights and a walnut one-piece stock. The first 4,000 Model 62s were shipped without serial numbers in violation of federal law. The company recalled the rifles for numbering; and, to this day, the owner of a centerfire Model 62 can return the rifle for numbering. There were 15,714 manufactured between 1963 and 1969. Add 15 percent for .256.

NOTE: From 1969 to 1972, the first digit of the serial number indicates the year of manufacture. In 1973, the system was changed by having the first two digits subtracted from 100 to find the year of production. For example: 2717793=100-27=1973.

BOLT-ACTIONS

The Marlin Firearms Company produced a great many bolt-action rifles, both single-shot and repeaters, starting in 1930 and continuing today. These rifles were low-priced and designed primarily as utility rifles. They also manufactured many autoloaders of the same type during these years. The Glenfield name will also be found on these models, as many were produced to be marketed by the large chain outlets. These rifles have no collectible value of which I am aware, and they often sell for under $100 in today's market. This list is for reference purposes.

Model 70P "Papoose"

This model is quite unique in that it is a total package concept. It is a semi-automatic takedown carbine chambered for the .22 rimfire family of cartridges. It has a 16.25" barrel and a 7-shot detachable magazine. It is supplied with 4X scope and bright red case that will float if dropped overboard. The stock is walnut-finished birch, with a pistol grip and rubber buttplate. It was introduced in 1986.

650	500	395	300	225	175

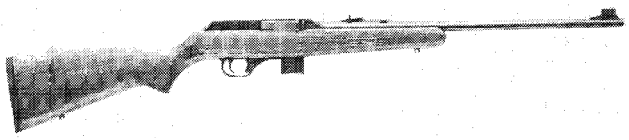
The year of manufacture of Marlin modern production rifles made between 1946 and 1968 can be determined by the letter prefix on the serial number.

The prefixes are as follows:

1946–C	1951–H	1956–N	1961–U	1966–AB
1947–D	1952–J	1957–P	1962–V	1967–AC
1948–E	1953–K	1958–R	1963–W	1968–AD
1949–F	1954–L	1959–S	1964–Y, Z	
1950–G	1955–M	1960–T	1965–AA	

Model 922M

First offered in 1993 this model is a semi-automatic .22 Win. Magnum Rimfire rifle. It features a 7-shot clip, 20.5" MicroGrove barrel. The receiver is sandblasted and drilled and tapped for scope mounting. Monte Carlo black walnut stock with rubber rifle buff pad. Adjustable rear sight and ramp front sight with hood. Rifle weighs 6.5 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
425	325	225	150	125	110

Model 995

Semi-automatic .22 LR only rifle features a 7-shot clip, 18" MicroGroove barrel. Receiver is grooved for scope mount and receiver has a serrated non-glare top. Adjustable sights. Monte Carlo American black walnut stock with checkered pistol grip and forearm. White buttplate spacer is standard. Rifle weighs 5 lbs. Introduced in 1979 and still in production.

NIB	Exc.	V.G.	Good	Fair	Poor
125	100	80	70	60	40

Model 995SS

Same as above but with stainless steel finish and black fiberglass stock. Introduced in 1995.

Model 60DL

Introduced in 2004 this model features a Monte Carlo hardwood stock with Walnutone walnut pattern finish with full pistol grip. Weight is about 5.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
160	135	100	—	—	—

Model 322 Bolt-Action Rifle

This model is chambered for the .222 cartridge and has a 24" medium-weight barrel with MicroGroove rifling. It has a checkered walnut pistol-grip stock. The magazine holds 4 shots, and the adjustable trigger and sights are Sako products. The Sako receiver is fitted for Sako scope mounting bases. The MicroGroove rifling in the barrel was not successful for this caliber, and accuracy fell off after as few as 500 shots—so this model was dropped and replaced. The serial numbers were Sako, and there were 5,859 manufactured between 1954 and 1959.

Exc.	V.G.	Good	Fair	Poor
600	500	325	200	125

Model 422 Bolt-Action Rifle

This model is the successor to the Model 322. It is simply the same rifle fitted with a 24", featherweight, stainless steel barrel and named the "Varmint King." The stock features a Monte Carlo stock with a cheekpiece. There were only 354 manufactured between 1956 and 1958.

Exc.	V.G.	Good	Fair	Poor
675	600	375	275	175

Model 455 Bolt-Action Rifle

This model is built on the Fabrique Nationale Belgian Mauser action. It is chambered for the .308 and the .30-06 cartridges. It has a stainless steel barrel made by Marlin and has a 5-shot magazine. It has a Bishop checkered walnut stock with detachable sling swivels and a leather sling. The rear sight is a Lyman 48, and the front is a ramp type with a detachable hood. The receiver is drilled and tapped for scope mounts. The trigger is an adjustable Sako unit. There were 1,079 manufactured in .3006 and only 59 in .308 between 1955 and 1959.

Exc.	V.G.	Good	Fair	Poor
600	500	325	200	125

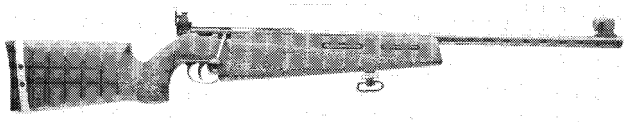
Model 880SS

Introduced in 1994 this .22 caliber rifle features a synthetic stock and a stainless steel receiver and barrel. The barrel is 22" long and a 7-shot magazine is standard. Discontinued in 2004.

NIB	Exc.	V.G.	Good	Fair	Poor
225	175	150	125	75	60

Model 2000

This is a bolt-action single-shot target rifle chambered for the .22 LR. The barrel is a 22" long MicroGroove design with match chamber and recessed muzzle. The rear sight is a fully adjustable target peep sight with a hooded front sight supplied with 10 aperture inserts. The stock is a Marlin blue fiberglass/Kevlar material with adjustable buttplate. There is an aluminum forearm rail with forearm stop and quick detachable swivel. Rifle weighs 8 lbs. Discontinued.



NIB	Exc.	V.G.	Good	Fair	Poor
425	325	250	200	150	125

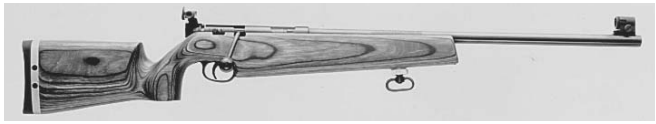
Model 2000A

This is a 1996 version of the Model 2000 introduced in 1994 that features an adjustable comb and an ambidextrous pistol grip. A Marlin logo is molded into the side of the buttstock. Weighs approximately 8-1/2 lbs. Discontinued.

NIB	Exc.	V.G.	Good	Fair	Poor
425	350	250	200	—	—

Model 2000L

Introduced in 1996 this version of the Model 2000 features a black/grey laminated stock. It is fitted with a heavy 22" barrel with a match chamber. Fitted with a two-stage target trigger and a rubber buttplate that is adjustable for length of pull, height and angle. Weight is about 8 lbs. Discontinued.



NIB	Exc.	V.G.	Good	Fair	Poor
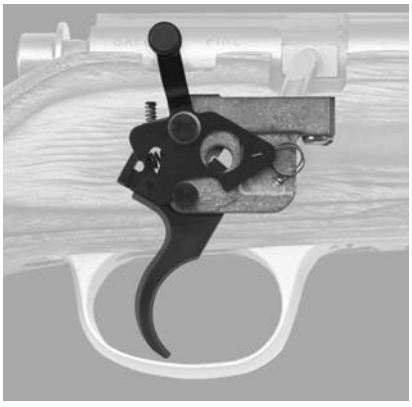
265	200	—	—	—	—

MODEL 900 SERIES

This bolt action rimfire series was introduced into the Marlin line in 2004 and features a T-900 fire control system. This is a trigger and safety system that features a wide serrated trigger and improved trigger pull. The safety activitation is also improved. The 900 series also features drilled and tapped receivers on all models.



Marlin T-900 fire control system

Model 983T

Chambered for the .22 WMR cartridge and fitted with a 22" barrel. Monte Carlo black fiberglass stock with checkering. Adjustable sights. Tubular 12-round magazine. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
265	200	—	—	—	—

Model 983S

As above but with laminated two-tone stock.

NIB	Exc.	V.G.	Good	Fair	Poor
365	275	—	—	—	—

Model 983

This .22 WMR model features a Monte Carlo stock of American black walnut with full pistol grip and checkering.

NIB	Exc.	V.G.	Good	Fair	Poor
345	250	—	—	—	—

Model 917

Bolt-action rifle chambered in .17 Hornady Mag. Rimfire; 7-shot clip magazine; fiberglass-filled synthetic stock with full pistol grip; swivel studs and molded-in checkering. Adjustable open rear sight, ramp front. 22-inch barrel. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
345	—	—	—	—	—

Model 917V

This model is chambered for the .17 HMR cartridge and fitted with a 22" heavy barrel. Hardwood Monte Carlo stock with full pistol grip. No sights. Detachable magazine with 7-round capacity. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
275	225	—	—	—	—

Model 917VR

Similar to Model 917 but with fiberglass-filled synthetic stock. Introduced 2006.

NIB	Exc.	V.G.	Good	Fair	Poor
275	225	—	—	—	—

Model 917VS

As above but with gray/black laminated hardwood stock. No sights. Magazine is nickel plated. Weight is about 7 lbs. Scope bases included.

NIB	Exc.	V.G.	Good	Fair	Poor
325	275	—	—	—	—

Model 917VSF

Chambered for the .17 HMR cartridge and fitted with a 22" heavy stainless steel fluted barrel with no sights. Nickel magazine capacity is 7 rounds. Laminated gray stock with Monte Carlo comb. Weight is about 6.75 lbs. Introduced in 2005.

NIB	Exc.	V.G.	Good	Fair	Poor
375	325	—	—	—	—

Model 917VT

Similar to above but with laminated brown thumbhole stock. Introduced 2008.

NIB	Exc.	V.G.	Good	Fair	Poor
410	—	—	—	—	—

Model 917VST

Similar to above but with laminated gray/black thumbhole stock. Introduced 2008.

NIB	Exc.	V.G.	Good	Fair	Poor
410	—	—	—	—	—

Model 917M2

This model is chambered for the .17 Mach 2 cartridge and fitted with a 22" heavy barrel. Monte Carlo hardwood stock with full pistol grip. No sights but scope bases included. Magazine capacity is 7 rounds. Weight is about 5.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
220	175	—	—	—	—

Model 917M2S

As above but with Monte Carlo gray/black laminated stock with full pistol grip. Stainless steel barrel and receiver. Nickel plated magazine.

NIB	Exc.	V.G.	Good	Fair	Poor
225	175	—	—	—	—

Model 982S

This model is chambered for the .22 WMR cartridge and fitted with a 22" stainless steel barrel with adjustable sights. Black fiberglass stock with Monte Carlo and full pistol grip. Detachable 7-round nickel magazine. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
250	225	—	—	—	—

Model 982L

As above but for a gray/black laminated stock. Weight is about 6.25 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
265	245	—	—	—	—

Model 982

As above but with American black walnut checkered stock with Monte Carlo and full pistol grip. Adjustable sights. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
295	275	—	—	—	—

Model 982VS

As above but with black fiberglass Monte Carlo stock. Heavy 22" stainless steel barrel. Nickel plated 7-round magazine. No sights. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
345	260	—	—	—	—

Model 982VS-CF

As above but with synthetic stock with dipped carbon-fiber textured finish.

NIB	Exc.	V.G.	Good	Fair	Poor
345	260	—	—	—	—

Model 925M

As above but with hardwood stock and full pistol grip. Fitted with 22" standard weight barrel. Adjustable sights. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
250	200	—	—	—	—

Model 925MC

As above but with Monte Carlo stock with Mossy Oak Break-up camo stock. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
285	225	—	—	—	—

Model 980V

This model is chambered for the .22 LR cartridge and fitted with a 22" heavy barrel. Black fiberglass stock with Monte Carlo and full pistol grip. No sights. Magazine capacity is 7 rounds. Weight is about 7 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
270	—	—	—	—	—

Model 980S

As above but with standard weight 22" barrel and 7-round nickel plated magazine and stainless steel barrel and receiver. Adjustable sights. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
250	—	—	—	—	—

Model 980S-CF

As above but with carbon fiber stock. Introduced in 2007.

NIB	Exc.	V.G.	Good	Fair	Poor
275	—	—	—	—	—

Model 981T

This model is chambered to handle interchangeably the .22 Short, Long, or LR cartridges in a tubular magazine. Black Monte Carlo fiberglass stock with full pistol grip. Adjustable sights. Fitted with a standard weight 22" barrel. Weight is about 6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
270	200	—	—	—	—

Model 925

This model is chambered for the .22 LR cartridge and fitted with a 22" standard weight barrel with adjustable sights. Monte Carlo hardwood stock with full pistol grip. Seven-round magazine. Weight is about 5.5 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
225	175	—	—	—	—

Model 925R

As above but with factory-mounted 3x9 scope.

NIB	Exc.	V.G.	Good	Fair	Poor
335	250	—	—	—	—

Model 925C

As above but with Monte Carlo hardwood stock with Mossy Oak Break-up camo pattern. Adjustable sights.

NIB	Exc.	V.G.	Good	Fair	Poor
335	250	—	—	—	—

Model 915Y Compact

Single shot .22 rimfire rifle with 16-1/4-inch barrel, hardwood stock with impressed checkering and iron sights.

NIB	Exc.	V.G.	Good	Fair	Poor
225	175	—	—	—	—

Model 915YS Compact

Similar to above but with stainless steel receiver and barrel , no checkering and fiber optic sights.

NIB	Exc.	V.G.	Good	Fair	Poor
245	195	—	—	—	—

MARLIN SHOTGUNS

Model 1898 Slide-Action Shotgun

This model was made in 12 gauge, with an exposed hammer. It has a takedown receiver and walnut pistol-grip stock and forend.

There is a 5-shot tube magazine, and the barrel lengths are from 26" and 32". They were manufactured between 1898 and 1905.

Grade A

This variation has a 38", 30", or 32" barrel, is Full choke, and is the plainest grade.

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

Exc.	V.G.	Good	Fair	Poor
375	325	225	125	75

Grade A Brush or Riot

This is the same shotgun with a 26" cylinder-bore barrel.

Exc.	V.G.	Good	Fair	Poor
425	375	250	150	100

Grade B

This is the same as the Grade A with a special smokeless steel barrel and a checkered stock.

Exc.	V.G.	Good	Fair	Poor
575	450	250	150	100

Grade C

This is a more deluxe version with engraving and fancier wood.

Exc.	V.G.	Good	Fair	Poor
1050	750	450	275	125

Grade D

This variation has a Damascus barrel and the greatest amount of engraving.

Exc.	V.G.	Good	Fair	Poor
2000	1300	800	400	250

Model 16 Slide-Action Shotgun

This model is exactly the same as the Model 1898 except that it is chambered for 16 gauge only. The four grades are the same also. They were manufactured between 1903 and 1910.

Grade A

Exc.	V.G.	Good	Fair	Poor
400	350	300	250	150

Grade B

Exc.	V.G.	Good	Fair	Poor

Model 42/42A Slide-Action Shotgun

This model was originally listed as the Model 42; but in the second year of production, the designation was changed to 42/A for no more apparent reason than standardization of models. This model is similar to the Model 24 except that the barrel markings are different. It is still an exposed hammer takedown gun chambered for 12 gauge. It was manufactured between 1922 and 1933.

Exc.	V.G.	Good	Fair	Poor
275	250	200	150	100

Model 43A Slide-Action Shotgun

This hammerless model was quite similar to the Model 28, with different markings and less attention to finishing detail. It was manufactured between 1923 and 1930.

Exc.	V.G.	Good	Fair	Poor
350	300	250	150	75

Model 43T Slide-Action Shotgun

This model is the same as the Model 43A takedown hammerless with a 30" or 32" matte rib barrel. The straight-grip stock is of high grade walnut, with a non-gloss oil finish and fitted recoil paid. This model was manufactured between 1922 and 1930.

Exc.	V.G.	Good	Fair	Poor
400	350	300	200	100

Model 43TS Slide-Action Shotgun

This is a custom-order version of the Model 43T, the same in all respects except that the stock could be ordered to any specifications the shooter desired. It was manufactured between 1922 and 1930.

Exc.	V.G.	Good	Fair	Poor
600	550	500	250	150

Model 44A Slide-Action Shotgun

This model is similar to the Model 31 and was advertised as its successor. It is a hammerless takedown chambered for the 20 gauge. It features an improved bolt opening device located in the trigger guard area instead of at the top of the receiver and has a shorter 4-shot magazine tube. The model was manufactured from 1922 until 1933.

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

375	325	275	150	100

Model 44S Slide-Action Shotgun

This model is similar to the Model 44A, with a higher grade walnut stock that featured hand-cut checkering.

Exc.	V.G.	Good	Fair	Poor
500	400	300	200	100

Model 49 Slide-Action Shotgun

This model is a 12-gauge, exposed-hammer takedown that combines features of the Model 42 and the Model 24. It is basically a lower-priced model that was never listed in the Marlin catalog. This model was part of Frank Kenna's money-raising program—anyone who purchased four shares of stock for $25 per share was given one, free of charge. This model was manufactured between 1925 and 1928.

Exc.	V.G.	Good	Fair	Poor
450	400	350	225	125

Model 53 Slide-Action Shotgun

This model is a hammerless, takedown, 12 gauge that was not in production for long. It is theorized that the Model 53 was produced to use up old parts on hand when the Model 43 was introduced. It was manufactured in 1929 and 1980.

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

Exc.	V.G.	Good	Fair	Poor
350	300	250	175	125

Model 60 Single-Barrel Shotgun

This is a break-open, exposed-hammer, top lever-opening 12 gauge with either 30" or 32" full-choke barrel. It has a pistol grip stock. There were approximately 60 manufactured in 1923.

Exc.	V.G.	Good	Fair	Poor
200	175	150	100	70

Model 63 Slide-Action Shotgun

This was the last of the slide-action shotguns produced by Marlin until the Model 120 in 1971. It is a hammerless, takedown 12 gauge and replaced the Model 43A in the Marlin catalog. This model had improvements over the earlier guns, but its introduction during the Depression did little to bolster sales. This model was also offered free of charge to anyone purchasing four shares of Marlin stock at $25 per share. It was manufactured between 1931 and 1933.

Exc.	V.G.	Good	Fair	Poor
350	300	250	175	125

Model 63T Slide-Action Shotgun

This is the trap-grade version of the Model 63. It has a better grade hand-checkered stock, with a fitted recoil pad and oil finish. It was manufactured between 1931 and 1933.

Exc.	V.G.	Good	Fair	Poor
375	325	275	150	100

Model 63TS Slide-Action Shotgun

This variation is the same as the Model 63T except that the stock dimensions were custom-made to the customer's specifications. It was manufactured between 1931 and 1933.

Exc.	V.G.	Good	Fair	Poor
400	350	300	200	100

Model .410 Lever-Action Shotgun (Old)

This was a unique venture for the Marlin Company—a lever-action shotgun based on the Model 1893 action with a longer loading port, modified tube magazine that held 5 shots, and a smoothbore barrel chambered for the .410 shot shell. The finish of this gun is blued, with a walnut pistol grip stock and grooved beavertail forend. It has a hard rubber rifle-type buttplate. The model was available with either a 22" or 26" full-choke barrel. This gun was also part of the stock purchase plan and was given free of charge to anyone purchasing four shares at $25 per share. It was also cataloged for sale and was manufactured between 1929 and 1932.

850	625	—	—	—

Model 90 Over-and-Under Shotgun

This gun was produced in response to a request from Sears Roebuck that Marlin should manufacture an over-and-under shotgun for Sears to market in their stores. The guns produced for Sears have the prefix 103 in their serial numbers and were marked "Ranger" before WWII and "J.C. Higgins" after the war. Prior to 1945 they were not marked Marlin; after that date Sears requested that the company stamp their name on the guns. They were also produced as the Marlin Model 90 during the same period and were chambered for 12, 16, and 20 gauge, as well as .410 bore. The 16 and 20 gauge guns were first offered in 1937 with 26" or 28" barrels. In 1939 the .410 bore was first offered with 26" barrel and 3" chambers. The barrels are either 26", 28", or 30", with various chokes. The action is a boxlock with extractors. Guns made prior to 1950 were solid between the barrels; after that date there was a space between the barrels. They can be found with double or single triggers and a checkered walnut stock. A ventilated rib was also offered as an option beginning in 1949. Be aware that this model was also available as a combination gun in .22 LR/.410, .22 Hornet/.410, and .218 Bee/.410. There were approximately 34,000 Model 90s manufactured between 1937 and 1963.

EDITOR'S NOTE: Collectors should be aware that this model has a receiver of malleable iron. It will not blue by the usual bluing methods. The barrels and ribs are soft soldered and cannot take hot bluing. Use caution.

Marlin Model 90 Combination Gun

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

Marlin Model 90 .410 bore

Photo by Lt. Col. William S. Brophy from *Marlin Firearms* with permission

Exc.	V.G.	Good	Fair	Poor
500	425	350	275	200

NOTE: Single trigger add 15 percent. Add 25 percent for 20 gauge guns and 125 percent for .410 bores. Add a 150 percent premium for combination guns. There are other rare gauge and barrel combinations that may affect value.

Premier Mark I Slide-Action Shotgun

This model was made by Manufrance and called the LaSalle. Marlin was able to purchase them without the barrels at a good enough price for them to barrel and market them under their own name. This model is 12 gauge only, with an alloy receiver and seven interchangeable barrels in 26"-30" lengths and various chokes. The plain stock is French walnut. The biggest problem with this gun is that the light weight (six pounds) produced severe recoil, and it was less than enjoyable to shoot. This model was in production from 1959 through 1963, with approximately 13,700 sold.

Exc.	V.G.	Good	Fair	Poor
225	175	150	100	75

Premier Mark II

This model is similar to the Mark I, with light engraving and a checkered stock.

Exc.	V.G.	Good	Fair	Poor

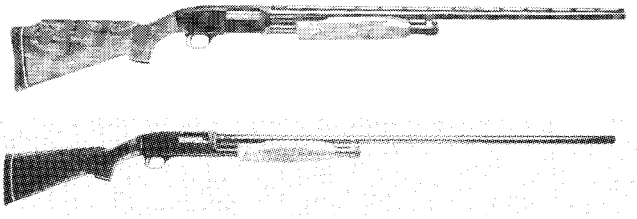
300	250	200	150	125

NOTE: Add 10 percent for vent rib.

Model 120 Slide-Action Shotgun

This model was styled to resemble the Winchester Model 12 and was advertised as an all steel and walnut shotgun. It was offered with interchangeable barrels from 26" to 40", and various chokes were available. The checkered stock is of walnut, with a fitted recoil pad. The tube magazine holds 5 shots, 4 in 3". There was a Trap Model available (1973-1975), as well as a slug gun (1974-1984). This model was manufactured between 1971 and 1985. A really nice gun, if a bit heavy. Add 10 percent for 36-inch "Long Tom" barrel.



Exc.	V.G.	Good	Fair	Poor
300	250	200	150	125

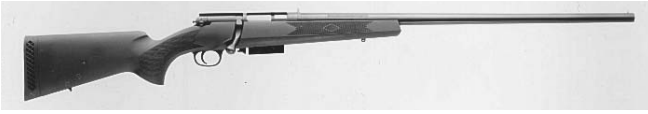
Model 778 Slide-Action Shotgun (Glenfield)

This model is similar to the Model 120, with a walnut finished hardwood stock instead of walnut, and the Glenfield name stamped on it. It was manufactured between 1979 and 1984.

Exc.	V.G.	Good	Fair	Poor
225	175	150	125	100

Model 50DL

This bolt-action 12 gauge shotgun is available with a 28" modified barrel, black synthetic stock. Ventilated recoil pad is standard. Brass bead front sight. Weight is approximately 7.5 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
300	275	225	150	125	100

Model 55 Bolt-Action Shotgun

This model is chambered for 12, 16, and 20 gauge, with Full or adjustable choke and barrels of 26" or 28". It is a bolt-action with 2-shot box magazine. The pistol grip stock is plain. This model was manufactured between 1950 and 1965.

Single-Shot Pocket Pistol

A .31 caliber single-shot percussion pistol with a 2.5" to 3.5" half octagonal barrel and a Maynard tape primer. The barrel marked "Mass. Arms Co/Chicopee Falls" and the primer door "Maynard's Patent Sept. 22, 1845." Blued, case hardened with walnut grips. Manufactured in the 1850s.

Exc.	V.G.	Good	Fair	Poor
—	—	2750	925	300

Maynard Carbine

This is a single-shot breechloader chambered for .35 or.50 caliber percussion. The barrel is round and 20" in length. The trigger guard is the lever that pivots the barrel in break-open fashion when it is lowered. The finish is blued, with a case colored frame. The buttstock is walnut, and there is no forend. This carbine was designed by the same Maynard who invented the tape primer system. There are two models—a 1st and a 2nd. They were made for both sporting use and as a U.S. Martial carbine. The 2nd Model was used considerably during the Civil War.

1st Model

This model is marked "Maynard Patentee/May 27, 1851/June 17, 1856." It has an iron patchbox and a curved buttplate. It has a Maynard tape primer system and a tang sight. Later production was fitted with a sling swivel. There are approximately 400 of these carbines that are U.S. marked, but the total manufactured in the late 1850s is unknown.

MAUSER WERKE

Oberndorf-am-Neckar, Germany

Established in 1869 by Peter and Wilhelm Mauser, this company came under the effective control of Ludwig Loewe and Company of Berlin in 1887. In 1896 the latter company was reorganized under the name *Deutsches Waffen und Munition* or as it is better known, DWM.

NOTE: For historical information, technical details, and photos and prices see the *Standard Catalog of Military Firearms.*

EARLY SPORTING RIFLES

A wide variety of commercial Model 98 Sporting Rifles were made, most of which had 23.5" ribbed barrels, open sights, 5-shot magazines, single or double set triggers, and either full or semi-pistol grip stocks.

NOTE: While the values listed are representative, it is suggested that prospective purchasers secure a qualified appraisal prior to acquisition. Mauser rifles almost always have extra cost features that can greatly affect price.

MODEL 1896 "BROOMHANDLE MAUSER PISTOL"

Manufactured from 1896 to 1939, the Model 1896 Pistol was produced in a wide variety of styles as listed. It is recommended that those considering the purchase of any of the models listed should consult Breathed & Schroeder's *System Mauser* (Chicago 1967) as it provides detailed descriptions and photographs of the various models.

PRICING NOTE: Prices listed are for the pistol only. A correct, matching stock/holster will add approximately 40 percent to value of each category. Non-matching stock/holster will add between $350 and $600 to prices.

Large Ring Cutaway Courtesy Gale Morgan

"BUYER BEWARE" ALERT by Gale Morgan: As noted in previous editions of the *Standard Catalog of Firearms,* over the past several years large quantities of "Broomhandle" Mausers and Astra "copies" have been imported into the United States. Generally these are in poor or fair condition and have been offered for sale in the $125 to $300 price range, primarly as shooters or parts guns. During recent years, a cottage industry has sprung up where these very common pistols have been "converted" to "rare, exotic, near mint, original" specimens selling well into the four figure price range. I have personallly seen English Crest, the U.S. Great Seal, unheard-of European dealers, aristocratic Coats-of-Arms, and Middle East Medallions beautifully photo-etched into the magazine wells and rear panels of some really common wartime commercials with price tags that have been elevated to $2,500 plus. They are quite eye-catching and if they are sold as customized/modified Mausers, the seller can price the piece at whatever the market will bear. However, if sold as a factory original—BUYER BEWARE.

Six-Shot Step-Barrel Cone Hammer

A 7.63mm semi-automatic pistol with a 5.5" barrel, fixed rear sight and checkered walnut grips. Marked "Ruecklauf Pistole System Mauser, Oberndorf am/Neckar 1896." Very few were manufactured. Too rare to price.

Twenty-Shot Step-Barrel Cone Hammer

As above, with a 20-shot extended magazine and tangent rear sight. Engraved "SYSTEM MAUSER" on top of chamber. Too rare to price.

System Mauser 10-Shot Cone Hammer

As above, with either fixed or tangent rear sight. Step barrel (pictured) is very rare as is tapered barrel. Magazine capacity 10 rounds.

Courtesy Joe Schroeder

MAUSER POCKET PISTOLS

Model 1910

A 6.35mm (.25 ACP) caliber pistol with a 3" barrel, 9-shot magazine and either a checkered walnut or (scarce) hard rubber wraparound grip. Early examples (below serial 60,000 or so) have a pivoting takedown latch above the trigger guard and are identified as "Sidelatch" models by collectors. Later production Models 1910s are often identified as the Model 1910/14. Manufactured from 1910 to 1934.

Sidelatch Model

Later Production (Model 1910/14)

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
450	275	200	150	100

Model 1914

A larger version of the Model 1910, chambered for 7.65mm Browning (.32 ACP) with a 3.5" or (rarely) 4.5" barrel. Very early examples up to serial 2500 or so had an odd hump on the slide and are called "Humpbacks" by collectors; these bring a considerable premium. Model 1914s with police or military markings bring a small premium. Manufactured between 1914 and 1934.

Model 1914 "Humpback"

3500	2000	1500	800	400

Model 1914 (later)

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
475	300	200	150	100

Model 1912/14

While Mauser's pocket pistols were very successful on the commercial market, Mauser was also trying to develop a larger caliber pistol for military use. The most successful of these was the Model 1912/14, though only about 200 were ever made. A few of these did reach the commercial market, and it's likely the pistol would have continued in production had WWI not broken out. Higher serial numbered guns were slotted for a Model 1896-style holster stock, and a few of these also had tangent sights.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
29000	17000	11000	8000	4000

NOTE: Add 25 percent for shoulder stock.

Model WTP I

This was Mauser's first post-WWI new design and first vest pocket pistol, with a 2.5" barrel and 6-shot magazine capacity. Grips were plastic wraparound, with one, two or three grip screws depending on production period. Production ended in the late 1930s, when the WTP II was introduced.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
600	300	250	175	125

Model WTP II

The WTP II was a much more compact design that its predecessor, with a 2" barrel and separate grip panels instead of Mauser's usual wraparound grip. Production was limited by the outbreak of WWII, so the WTP II is much scarcer than the WTP I. Under French occupation at least several hundred WTP IIs were assembled and sold; these can be identified by their very low electric penciled serial numbers and lack of German proofing, and bring a slight premium over the pre-war German manufactured pistols.

Courtesy Gale Morgan

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
650	450	325	250	175

Model 1934

In response to competition from Walther and others, in 1934 Mauser spruced up its aging 1910/14 and 1914 pistols with a new high-polish finish and form-fitting swept back grips. Nickel finish was also offered, but is very rare (50 percent premium, but beware of renickeled blued guns). The 7.65mm pistols became popular with both the military and police, but those so marked can bring a considerable premium.

MODEL HSC

The HSc was a totally new design, chambered for 7.65mm Browning and featuring double-action lockwork and a partially concealed external hammer. Introduced just as WWII broke out, the HSc was produced through the war for both commercial sale and military use. Serials started at 700,000, and the first 1500 or so had the grip screws located near the bottom of the grip and bring a large premium. Finish deteriorated as the war progressed, and some HSc pistols were even produced under French occupation after the war ended.

Courtesy Orvel Reichert

NOTE: Add 20 percent for Waffenamt markings, and 50 percent for Navy marked front straps.

Low Grip Screw Model

As above, with screws that attach the grip located near the bottom of the grip. Highly-polished blue, checkered walnut grips and the early address without the lines and has the Eagle N proof. Some have been observed with Nazi Kreigsmarine markings. Approximately 2,000 were manufactured.

Model HSc Post-war Production

In the late 1960s Mauser resumed production of the HSc in both 7.65mm and 9mm Browning short (.380). Five thousand post-war HSc pistols were specially marked with an American eagle, and bring a slight premium over standard marked pistols. In the 1980s Mauser licensed HSc production to Gamba in Italy, which produced an enlarged frame version of the HSc with a double-column magazine. In both German and Italian production, .380s bring about a 20 percent premium over .32s.

Mauser Production (.32)

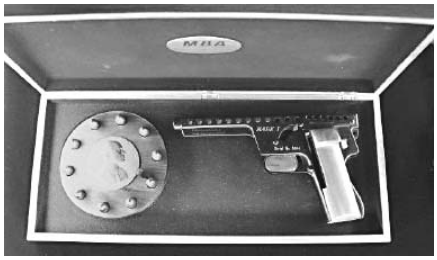
M. B. ASSOCIATES-GYROJET

San Ramon, California



Established in 1960 by R. Maynard and Art Biehl, M. B. Associates produced the Gyrojet pistols and carbines from 1962 to 1970. Basically a hand held rocket launcher, shooting a 12mm or 13mm spin stablized rocket cartridge, composed of four-part solid rocket fuel. The nose of the round was forced rearward onto a stationary firing pin, igniting the fuel, expelling the round and recocking for the next shot. These were not very accurate and led to MBA's demise. Ammunition typically sells for $35 per round or more. *Dave Rachwal*.

Mark I Model A

13mm pistol, cased with a Goddard commemorative medal and 10 dummy rounds, black anodized finish, with walnut grips.

Double-Barrel Shotguns

From 1905-1918 Meriden Fire Arms Co. successor to A.J. Aubrey, made 12, 16, and 20 gauge sidelock double-barrel shotguns. These were better quality hammer and hammerless side-by-sides fitted with twist, laminated, Damascus, and steel barrels in grades A to G. Some of these guns were beautifully engraved by the same artisans who worked for Parker Bros. and other Connecticut gunmakers. Prices in 1910 ranged from $40 to $250 but they represented great value for the money as they were superior to the popular Crescent guns which they closely resembled. Current values depend on model, grade, gauge, and condition. It is difficult to find examples in excellent condition as these were sold by Sears to customers who put them to hard use. In good condition their current values range from $250 for plain Janes to $3,500 or more for the top grades, of which few specimens are known.

Single-Barrel Shotguns and Rifles

Meriden Fire Arms Co. also made many single-barrel shotguns and rifles whose current values are determined by growing collector interest and condition.

MERKEL, GEBRUDER
Suhl, Germany

An Introduction to Merkel Brother's Guns by Dan Sheil

Merkel Brothers shotgun and rifle makers began production around the turn of the century in Suhl, Germany. Merkel made a number of different models but the company was most well known for its over-and-under shotgun. It also made bolt-action rifles, side-by-side double express rifles, falling block single-shot rifles, side-by-side shotguns, drillings, and just about anything in the way of firearms its customers desired.

Perhaps the company's greatest productive era fell between the end of World War I and the 1950s. During the 1930s most of the live pigeon shoots were won with Merkel shotguns. However, there seems to be a difference of opinion about when Merkel built its best quality guns. This is not an easy question to answer. Most shooters and collectors feel that pre-World War II guns are the best examples of Merkel craftsmanship. But, in my opinion, some of the finest Merkels I have seen were produced immediately after World War II. Outstanding examples of Merkel's quality continue to appear up to the construction of the Berlin Wall in 1961.

Another area of controversy is the high grade Merkel 300 series shotgun. Many have compared this gun to the Italian and British makers and believe it is a mass produced gun. This is not the case because all Merkel shotguns are handcrafted and as far as I know barrels will not interchange unless they are supplied with the gun from the factory. While the 100 and 200 series guns may be mass produced, the 300 series is not, and that is easy to determine by looking at the serial number together with the date stamped on the barrel. Very few 300 series guns were produced in a given period.

In terms of durability, strength, and reliability, there is not an over-and-under shotgun that is built as strong as the Merkel. It has two Kersten style locking lugs on the upper barrel that fit into the face of the receiver while the bottom has two under lugs that give the gun a rugged four position locking system. I don't think I have ever heard of a Merkel being sent back to the gunmaker or a gunsmith to have the frame tightened. It just is not necessary; the guns will not shoot loose.

With respect to value, the Merkel over-and-under guns have been sleepers in the gun industry for a number of years. Until recently they have not brought the price that they deserve. I am specifically talking about the 300 series; the 303 Luxus and the 304. Generally speaking all of the special order Merkel over-and-under shotguns have done well. I think the shooting public will begin to recognize the quality and craftsmanship built into every one of these fine guns.

One last comment regarding special order Merkels and the company's reputation for building just about anything the customer wanted. It is impossible to cover all of the variations that the company produced in its long history, but the buyer should be aware that he may encounter some different and uncataloged Merkels along the way.

In August 1993 Merkel Brothers declared bankruptcy. The assets of the company were reportedly purchased by Steyr. GSI, Inc. Trussville, Alabama currently imports Merkel guns.

NOTE: Merkel is now owned by Heckler & Koch.

Editor's Comment: The Merkel gun prices listed are based on either one or two factors. First, they are no longer in production or second that the guns were built prior to the Berlin Wall, which generally bring a premium. An additional factor was introduced in 1994 when the factory began to use an alpha numeric serial number system. This new system dates the guns from 1994. The prices listed for new Merkels are influenced by the value of the dollar to the German Mark.

SIDE-BY-SIDE SHOTGUNS

Model 8

This model has a self-cocking Deeley boxlock action side-by-side with cocking indicators. The locking mechanism is a Greener cross-bolt with double-barrel locking lug. Triggers are single-selective or double. The safety is automatic and tang mounted. This model has an extractor. Offered in 12 and 16 gauge with 28" solid rib barrels or 20 gauge with 26.75" barrels. Available with straight or pistol grip oil-finished walnut stock. Receiver is case colored with light scroll engraving. The 12 and 16 gauge guns weigh about 6.8 lbs. while the 20 gauge weighs approximately 6 lbs.

1100	880	770	600	500	400

Model 117/117E

Offered in 12 and 16 gauge with various barrel lengths, this model featured a boxlock action with double triggers and extractors. Ejectors were available under the "E" designation. The boxlock action body was scrupled at the rear with fine line scroll engraving.

Exc.	V.G.	Good	Fair	Poor
5500	3850	1650	1000	500

Model 118/118E

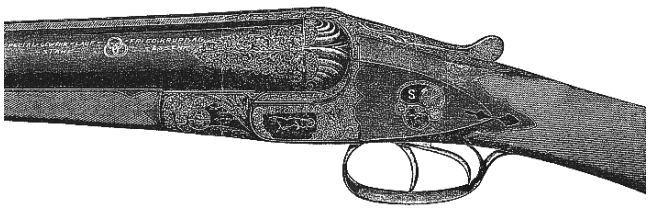
Also offered in 12 and 16 gauge this model is similar to above model with slightly more engraving and better wood. This model also has some engraving coverage on the breech end of the barrels.

Exc.	V.G.	Good	Fair	Poor
6600	4400	2500	1200	650

Model 124/125

Similar to the above models but supplied with extractors for the Model 124 and ejectors for the Model 125. Both models have more engraving coverage with game scenes. Finer checkering and fancy wood is seen on this model.

Model 124



Exc.	V.G.	Good	Fair	Poor
4900	3850	2200	1500	700

Model 125

Exc.	V.G.	Good	Fair	Poor
5500	4100	3300	2000	1000

Model 130

This was one of Merkel's highest side-by-side shotguns. It featured a sidelock action, extra fancy wood, fine line checkering, and full coverage game scene engraving.

Exc.	V.G.	Good	Fair	Poor
16500	14000	8200	4500	—

Model 126

Similar to the Model 130 but fitted with removable sidelocks.

Exc.	V.G.	Good	Fair	Poor
16500	14000	8200	4500	—

Model 170

This model was offered in 12 gauge only with automatic ejectors. The boxlock action was engraved with fine full coverage scroll.

Exc.	V.G.	Good	Fair	Poor
5500	4400	3500	2500	1200

Model 127

This model was Merkel's finest side-by-side shotgun. The sidelock action featured full coverage fine line scroll engraving of the best quality.

Exc.	V.G.	Good	Fair	Poor
23000	17500	13500	6000	—

Model 47E

Same as above but fitted with ejectors. Offered in 12, 16, or 20 gauge. Supplied with fitted luggage case.

NIB	Exc.	V.G.	Good	Fair	Poor
4500	3200	2100	1200	—	—

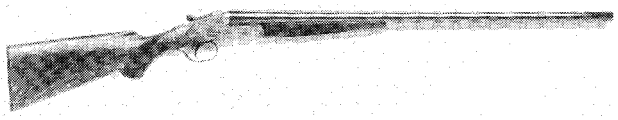
Model 147

Same as Model 8 but with silver grayed receiver with fine engraved hunting scenes, engraved border, and screws. This model has been discontinued.

NIB	Exc.	V.G.	Good	Fair	Poor
3200	2750	1900	1100	600	400

Model 147E

Same as above but fitted with ejectors. Offered in 12, 16, 20, or 28 gauge. Supplied with fitted luggage case.



NIB	Exc.	V.G.	Good	Fair	Poor
5250	3850	2700	1500	—	—

Model 147EL

Similar to the Model 147E but with fancy walnut stock. Supplied with fitted luggage case.

NIB	Exc.	V.G.	Good	Fair	Poor
6600	4950	3400	2200	—	—

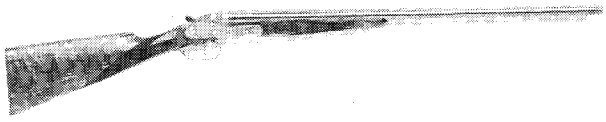
Model 122

This model features the same specifications as the above models but has false sideplates. This model is fitted with ejectors and the receiver is silver grayed with fine engraved hunting scenes on false sideplates, engraved border, and screws.

NIB	Exc.	V.G.	Good	Fair	Poor
5500	4200	3000	1900	950	500

Model 47SL

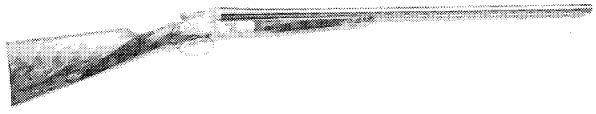
Same as above but with scroll engraving in place of hunting scenes.



NIB	Exc.	V.G.	Good	Fair	Poor
8200	6100	4400	3000	1750	850

Model 147SL

This model features true Holland and Holland-style sidelocks with cocking indicators. Gauge and barrel lengths are as above. Stock is fancy walnut. However, 20 gauge gun weighs 6.4 lbs., 28 gauge gun weighs about 6.1 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
10000	7000	5500	3850	2250	1000

Model 1622EL

Similar to Model 1622E but with luxury grade wood. Add 30 percent for 2-barrel set (second set is 28" 20 gauge).

NIB	Exc.	V.G.	Good	Fair	Poor
10000	8400	5850	—	—	—

OVER-AND-UNDER SHOTGUNS

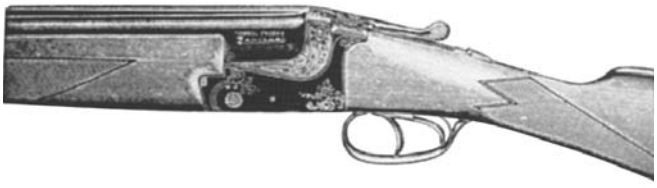
Model 102E

This was Merkel's standard over-and-under boxlock model. Offered in 12 gauge with 28" barrels or 16 gauge with 26" barrels. Both are fitted with double triggers, semi-pistol grip, and ejectors.

Exc.	V.G.	Good	Fair	Poor
1800	1450	1100	650	400

Model 103E

Similar to the standard but with more English scroll engraving coverage and better wood. This model was offered in 12, 16, and 20 gauge.



Exc.	V.G.	Good	Fair	Poor
2450	1650	1350	950	600

Model 204E

This model is essentially a Model 203E with finer engraving. This model was discontinued prior to 1939.

Exc.	V.G.	Good	Fair	Poor
6600	4900	3300	2200	1750

Model 301E

This is a boxlock model with scalloped action chambered for the 12, 16, 20, 24, 28, and 32 gauge. The engraving is an English scroll and the trigger guard is horn. Double triggers and pistol grip are standard. This model was produced prior to 1939.

Exc.	V.G.	Good	Fair	Poor
4900	4000	2500	2000	1850

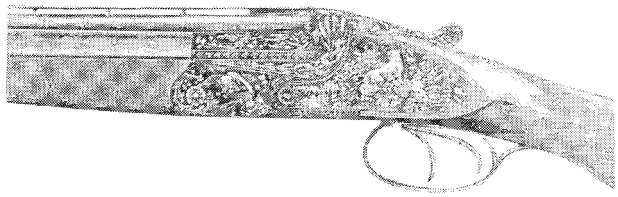
Model 302E

Similar to the Model 301E but fitted with side plates. The full-coverage engraving features game scenes. This model produced prior to WWII.

Exc.	V.G.	Good	Fair	Poor
13250	11000	8250	4400	2000

Model 303 Luxus

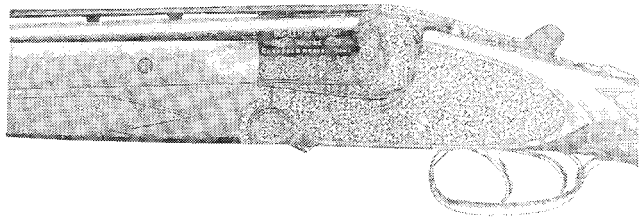
This over-and-under Merkel is custom built to the customer's specifications. Each gun is unique and should be appraised by a knowledgeable individual who is familiar with quality European shotguns.



NIB	Exc.	V.G.	Good	Fair	Poor
22000	—	—	—	—	—

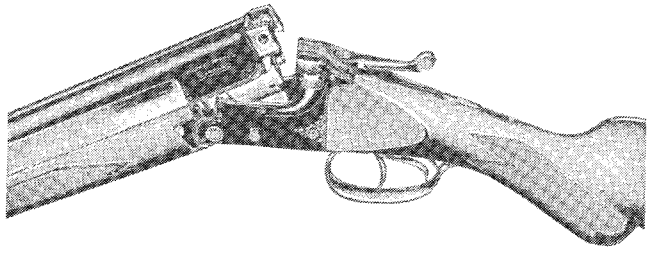
Model 304E

This pre-war model was the highest grade in Merkel's over-and-under shotgun line. A sidelock gun with full coverage scroll engraving of the highest quality. Fine line checkering and extra fancy wood make this gun difficult to appraise due to its rarity. A qualified appraisal before a sale is highly recommended.



Model 400E

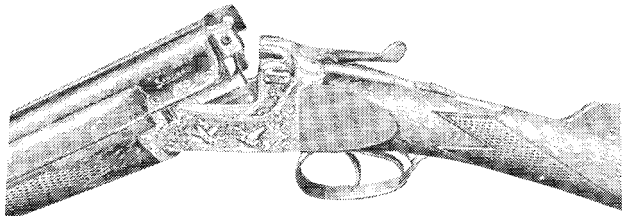
A higher grade over-and-under fitted with Kersten crossbolt, finer engraving, and fancy wood. Merkel offered this grade in 12, 16, 20, 24, 28, and 32 gauge with choice of barrel lengths. This model was produced prior to 1939.



Exc.	V.G.	Good	Fair	Poor
1950	1450	1000	600	400

Model 401E

Similar to the model above but with full coverage game scene engraving.

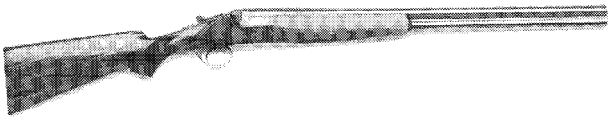


Exc.	V.G.	Good	Fair	Poor
2750	2000	1350	800	600

Model 200E

The action on this model is a self cocking Blitz where the hammers are attached to the trigger plates. The locking mechanism is a Kersten double cross bolt lock with release. Trigger

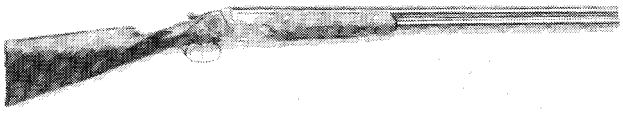
may be either single-selective or double. The manual safety is mounted on the tang. Fitted with coil spring ejectors. Offered in 12 and 16 gauge with 28" solid rib barrels or 20 gauge with 26.75" barrels. The oil-finished stock is offered with straight or pistol grip. The receiver is case colored with engraved border and screws. The 12 gauge weighs 7 lbs., the 16 gauge 6.8 lbs., and the 20 gauge 6.4 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
2900	2200	1650	1000	800	500

Model 201E

Same as Model 200E but with silver grayed receiver with fine engraved hunting scenes, engraved border, and screws.



NIB	Exc.	V.G.	Good	Fair	Poor
3700	3100	2500	1650	1000	750

Model 202E

This model has the same basic specifications as the Model 201E but is fitted with false side plates with cocking indicators.

NIB	Exc.	V.G.	Good	Fair	Poor
8200	5500	3850	2500	1500	1000

Model 200ES

This model features a Blitz action with cocking indicators and Kersten double cross bolt lock with release. The trigger is single-selective with tang-mounted manual safety. Coil spring ejectors are standard. Offered in 12 gauge only with 26.75" or 28" ventilated rib barrel. The walnut stock has skeet dimensions with pistol grip. Receiver is silver grayed with 112 coverage scroll engraving, engraved borders, and screws. Weighs approximately 7.3 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
4400	3600	2750	2200	1500	1000

Model 200ET

Same as Model 200ES, but in a trap configuration. The ventilated rib barrel length offered is 30".

NIB	Exc.	V.G.	Good	Fair	Poor
4700	3850	3000	2250	1750	1000

Model 200SC (Sporting Clays)

Introduced in 1995 this model is offered in 12 gauge only with 3" chambers and 30" barrels with ventilated rib. It is fitted with a single-selective trigger adjustable for length of pull. It has a special walnut oil finished stock with 26 lpi checkering. Pistol grip and Pachmayr Sporting Clays recoil pad is standard. Weight is approximately 7.6 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
7200	6000	3300	1500	900	450

NOTE: With Briley choke tubes add $500.

Model 201ES

Same as Model 200SC but with full coverage scroll engraving.

NIB	Exc.	V.G.	Good	Fair	Poor
4950	4050	3300	2500	2000	1000

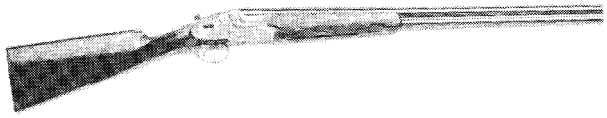
Model 201ET

Same as Model 210ES but fitted with a 30" barrel and trap stock dimensions.

NIB	Exc.	V.G.	Good	Fair	Poor
4950	4100	3300	2750	2000	1000

Model 203E

This model has true Holland & Holland-style sidelocks with cocking indicators. These sideplates are removable with cranked screw. The gauge selection and barrel are the same as those listed above. The silver grayed receiver has English-style large scroll engraving. This model has been discontinued.



NIB	Exc.	V.G.	Good	Fair	Poor
13500	10400	8250	5000	2500	1000

Model 303E

Same as Model 203E but with detachable sidelock plates with integral retracting hook. The Model 303E also has medium scroll work engraving and Holland & Holland-type ejectors.

NIB	Exc.	V.G.	Good	Fair	Poor
18700	16500	13400	7500	5000	2500

Model 303EL

This model features H&H-style sidelocks that are quick detachable without tools. Receiver is engraved with hunting scenes. Offered in 12, 20 and 28 gauge. Double triggers and fancy walnut stock with pistol or straight grip. Weight for 12 gauge is about 7 lbs, for the 20 gauge about 6.4 lbs, and for the 28 gauge about 6.4 lbs. Fitted luggage case standard.

NIB	Exc.	V.G.	Good	Fair	Poor
26000	18700	13000	—	—	—

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Model 2000EL

This model features a Kersten cross bolt lock, scroll engraving on a silver grayed receiver and a modified Anson & Deely boxlock action. This gun is offered in 12, 20, or 28 gauge with ejectors, single-selective or double triggers, fancy wood, and choice of pistol or straight grip stock. Weight is about 7 lbs. for 12 gauge, 6.4 lbs. for 20 gauge, and 6.4 lbs. for 28 gauge.

NIB	Exc.	V.G.	Good	Fair	Poor
7200	5100	3600	2200	1500	750

Model 2000EL Sporter

Similar to the above model but fitted with 30" barrels on the 12 gauge, and 28" barrels on the 20 and 28 gauge.

NIB	Exc.	V.G.	Good	Fair	Poor
7200	5200	3600	2200	1500	750

Model 2000CL

Introduced in 2005 this model is chambered for the 12, 20, or 28 gauge with 28" barrels choked improved cylinder and modified. Scroll engraved receiver with case colors. Single selective trigger with auto ejectors. High grade wood with semi-pistol grip and straight grip.

NIB	Exc.	V.G.	Good	Fair	Poor
7700	5800	3750	—	—	—

Model 2000CL Sporter

As above but with 30" barrel for the 12 gauge with vent rib and 28" barrels with solid rib for the 20 and 28 gauge guns. Pistol grip stock. Introduced in 2005.

NIB	Exc.	V.G.	Good	Fair	Poor
8100	6100	—	—	—	—

NOTE: Deduct $500 for 20 and 28 gauge models.

Model 2001EL

Similar to the Model 2000 but with finely engraved hunting scenes. This model is offered in 28 gauge as well as 12 and 20 gauge.

RIFLE/SHOTGUN COMBINATION GUNS

Model 410E

Merkel's base boxlock model with ejectors. Produced prior to WWII.

Exc.	V.G.	Good	Fair	Poor
2500	1950	1350	750	500

Model 411E

Similar to the above but with the addition of a small coverage of scroll engraving.

Exc.	V.G.	Good	Fair	Poor
2750	2200	1650	1100	600

Model 300

A boxlock hammerless four barrel shotgun/rifle combination. The shotgun barrels were 12, 16, or 20 gauge, while the top rifle barrel was .22 rimfire with the bottom rifle barrel .30-30 or .25-35. Probably any combination of rifle and shotgun could be used as this was a special order gun. Very rare.

Model 311E

This combination gun has additional English scroll engraving.

Exc.	V.G.	Good	Fair	Poor
8600	7200	5500	2250	1250

Model 312E

This model is fitted with sideplates and game scene engraving.

Exc.	V.G.	Good	Fair	Poor
10400	9000	7500	4000	2000

Model 313E

This model has sidelocks with fine, full coverage scroll engraving. An expert appraisal is recommended due to this model's rarity and unique features.

Exc.	V.G.	Good	Fair	Poor
13000	11750	8800	4400	2000

Model 314E

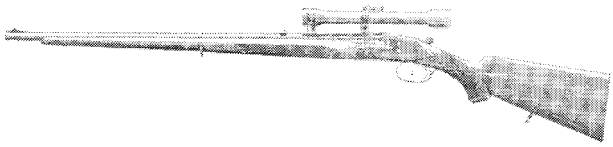
This sidelock model is also rare and unique. An expert appraisal is recommended prior to a sale. Extra barrels will frequently be seen with this model.

SINGLE-SHOT AND BOLT-ACTION RIFLES

Merkel built special single-shot rifles and bolt-action rifles. These guns were produced prior to WWII and are seldom seen in the United States. The buyer should exercise caution and seek expert assistance prior to a sale.

Model 180

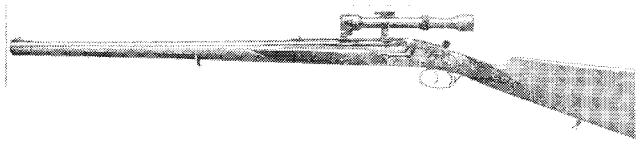
This is a top lever single rifle with double under lugs built on a boxlock action. The stock is 3/4 with pistol grip. Commonly referred to as a stalking rifle. Offered in a variety of European calibers. A rare Merkel.



Exc.	V.G.	Good	Fair	Poor
3300	2400	1650	1000	500

Model 183

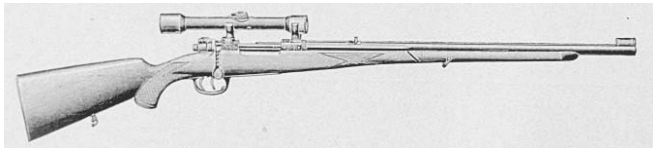
This top lever model features a Holland & Holland-type sidelock action with the sidelock on the left side and the removable side plate on the right side. Fitted with a straight-grip stock and full-length forearm with sling swivels, fine line checkering, and fancy wood. A rare rifle.



Exc.	V.G.	Good	Fair	Poor
8300	5500	3850	2000	1200

Model 190

This is Merkel's version of a Sporting rifle built on a Mauser action. Offered in a variety of European calibers. These were special order rifles and will be seen in a variety of configurations.



Exc.	V.G.	Good	Fair	Poor
3300	2500	1650	1100	650

DOUBLE RIFLES—COMBINATION GUNS—DRILLINGS

Side-by-Side Double Rifles Model 128E

This side-by-side rifle is a droplock design with scroll and game scene engraving. The wood is Circassian walnut with fine line checkering. Offered in a variety of European calibers. Because of the rarity and uniqueness of each rifle a qualified appraisal should be sought prior to a purchase.

Model 132E

Similar to the Model 128E but with full coverage scroll engraving and fancy wood. This model also should have an expert appraisal done prior to a purchase.

Model 140-1

This model features a Greener cross bolt, scroll engraving with case hardened receiver. Extractors and double triggers with pistol grip stock are standard. Offered in a wide variety of European and American calibers.

NIB	Exc.	V.G.	Good	Fair	Poor
6500	5200	4100	—	—	—

Model 140-1.1

Same as above model but with finely engraved hunting scenes.

NIB	Exc.	V.G.	Good	Fair	Poor
7400	6100	4400	—	—	—

Model 140-2

This double rifle has an Anson & Deely boxlock action. Double triggers. Barrel length is 23.6". Chambered for .375 H&H, .416 Rigby, and the .470 NE. Pistol grip stock with cheekpiece on oil finish walnut. Weight is about 10.7 lbs. depending on caliber.

NIB	Exc.	V.G.	Good	Fair	Poor
11500	8250	6000	—	—	—

Model 140-2.1

This model is similar to the one above but is engraved with African game scenes.

BOLT ACTION RIFLES

KR-1 Premium

A short stroke bolt action rifle chambered for .243, .308 or .30-06 and 7mm Rem. mag., and .300 Win. mag. calibers. Barrel length for standard calibers is 20" or 22", and for magnum calibers 22" or 24". Checkered walnut stock with hog-back comb. Magazine capacity is 3 rounds. Single set trigger. Interchangeable barrels. Arabesque engraving on bolt housing and trigger plate. Select walnut stock with Bavarian cheekpiece. Weight is about 6.4 lbs. depending on caliber and barrel length. Introduced in 2005.

NIB	Exc.	V.G.	Good	Fair	Poor
3550	2900	—	—	—	—

NOTE: Add $200 for magnum calibers.

KR-1 Weimar

As above but with rounded bolt housing with hand chiselled engraving with game scenes. Trigger and lock bolt head are gold titanium nitride plated. Select walnut stock with rosewood forearm tip and Bavarian double fold cheekpiece. Introduced in 2005.

NIB	Exc.	V.G.	Good	Fair	Poor
11000	8800	—	—	—	—

NOTE: Add $200 for magnum calibers.

MERRILL

Fullerton, California

Sportsman

A single-shot pistol manufactured in a variety of calibers with either a 9" or 12" octagonal barrel having a wide ventilated rib, adjustable sights, and integral telescope mounts. Blued with walnut grips.

Exc.	V.G.	Good	Fair	Poor
700	575	325	175	125

NOTE: Interchangeable barrels add $75. Wrist support add $25.

MERRILL, JAMES H.

Baltimore, Maryland

Merrill Rifle

A single-shot breechloading rifle that is chambered for .54 caliber and utilizes the percussion ignition system. The breech opens for loading by lifting and pulling back on a lever. The barrel is 33" in length, and there is a full-length walnut stock held on by two barrel bands. The mountings and patch box are brass; and the lock is case colored, with a browned barrel. The lock is marked "J.H. Merrill Balto./Pat. July 1858." There are military acceptance marks on the stock. There were approximately 775 of these rifles manufactured and purchased by the government for use during the Civil War. They were made in 1864 and 1865.

Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	V.G.	Good	Fair	Poor
—	—	6350	2750	750

Merrill Carbine

Similar in appearance to the rifle except that the barrel length is 22" and the stock is only half-length with one barrel band. There are some variations that are quite subtle in appearance but which have a considerable effect on values. We recommend that an independent appraisal be secured. The values given are for the standard 1st and 2nd Types. There were approximately 15,000 total manufactured, and most were used in the Civil War.

1st Type

No eagle stamped on the lock, and the breech lever is flat.

MERWIN HULBERT & CO.

New York, New York
By Jim Supica, Pres., Old Town Station, Ltd.

Merwin Hulbert & Co., New York City. Founder Joseph Merwin had previously been involved in Merwin & Bray. Merwin Hulbert & Co. or its principals were also involved in Phoenix Rifle, Evans Rifle Company, American Cartridge Company, and Hopkins & Allen of Norwich, CT. Most Merwin Hulbert revolvers will be marked with the Hopkins & Allen name, in addition to Merwin Hulbert. They were made for a fairly brief period, with most production apparently taking place during the 1870s & early 1880s.

There has been some confusion over a classification system for MH revolvers. The system adopted here is based on the distinctions listed in Art Phelps' book, *The Story of Merwin Hulbert & Co. Firearms*. We believe this is the first time the Phelps system has been adapted to a list format.

LARGE-FRAME MERWIN HULBERT SIXGUNS

There has been a marked increase in interest in Merwin Hulbert & Co. over the past decade, with many coming to recognize them as one of the pre-eminent makers of large-frame revolvers used in the American West. Total production of large-frame revolvers has been estimated at a few thousand by some sources. However, the frequency with which they are encountered suggests possibly greater production.

MH used a unique system of opening, loading & unloading their revolvers which was supposed to allow selective ejection of spent shells, leaving remaining cartridges in place. A latch on the bottom of the frame is pushed toward the rear of the gun, and the barrel and cylinder are rotated to the right (clockwise, as viewed from the rear of the revolver) 90 degrees. The barrel and cylinder are then pulled forward, far enough to allow empty brass to fall free. This system required exceptional quality machining, and some modern authorities are on record as considering the Merwin Hulbert to have the finest workmanship of all revolvers of the era.

All are .44 caliber 6-shot large-frame revolvers. Beyond that, to fully identify a large-frame Merwin Hulbert, you must specify the following:

1. **MODEL DESIGNATION —** First Model has an open top and scoop flutes, round barrel, and two small screws above the trigger guard. Second Model is similar to the first, except with only one screw above the trigger guard. Third Model has a top-strap with standard flutes and a round barrel. Fourth Model is similar to the third, except that it has a ribbed barrel. The open-top 1st and 2nd Models seem to be more sought after. The 4th Model is rare, and will bring a premium from a serious Merwin collector.
2. **FRONTIER ARMY or POCKET ARMY —** Frontier Army models have a square butt, and were made in 1st through 4th models. Pocket Army models have a bird's-head butt with a pointed extension with lanyard hole, and are found in 2nd or 3rd Model configuration. Generally, the Frontier Army will bring more than the Pocket Army.
3. **SINGLE-ACTION or DOUBLE-ACTION —** The topstrap models, 3rd and 4th, were manufactured in both single-action and double-action. The single-action models tend to bring more.
4. **BARREL LENGTH —** Standard barrel length on the Frontier Army 1st, 2nd, & 3rd Models is 7", with a 5-1/2" barrel common on the 4th Model. Standard barrel length on the Pocket Army was a more "pocket-sized" 3-1/2". However, somewhat ironically, bird's-head butt models marked "Pocket Army" were also produced with full length 7" barrels. Generally, these longer barrels will bring a bit more than the shorter ones.
5. **CALIBER —** Most common is .44-40 (designated "Winchester Calibre 1873"). Merwins were also chambered for .44 Merwin Hulbert (somewhat similar to the S&W .44 American cartridge), and .44 Russian. The less common calibers may bring a small premium from serious Merwin collectors.
6. **FOREIGN COPIES —** The Merwin Hulbert design was relatively widely copied during the period of use, particularly in Spain. It seems that much of this production may have gone to Mexico, and some found their way to the U.S. Although these Spanish copies may bear markings such as "System Merwin Hulbert" or other usage of the words "Merwin Hulbert," they generally will not be found with the Hopkins & Allen marking. Spanish firms making Merwin copies included Orbea Hermanos and Anitua y Charola. These Spanish copies may bring half or less of what an original Merwin will bring, and it can sometimes take a fairly experienced eye to tell the difference.
7. **ENGRAVING —** Special order engraving was available, and it was usually executed in a distinctive and colorful "punch dot" style, which has come to be associated with Merwins (although it is occasionally encountered on other makes of firearms). For a long time, this style was somewhat dismissed as a bit crude and lacking in artistry. However, a new appreciation of Merwin engraving has emerged, and factory engraved pieces will bring a significant premium. Often, a panel scene depicts an animal, object, or landmark. These panel scenes have an almost "folk art" quality to them, and will enhance the value further. Engraved Merwins are sometimes encountered with the engraving filled with colored enamel, quite rare, and, if original, this will bring a further premium.
8. **FINISH —** The vast majority were nickel plated. Original blued guns will bring a premium.

SMALL FRAME MERWIN HULBERT POCKET REVOLVERS

Top: Single-Action Pocket Revolver. Bottom: Double-Action Pocket Revolver Courtesy Supica's Old Town Station

The .32 & .38 centerfire revolvers were manufactured with the unique Merwin Hulbert twist-open system, like the large frame revolvers. They were often advertised as chambered for the .32 MH & Co. or .38 MH & Co. cartridges, but it appears as if these cartridges may have been essentially the same as the .32 S&W and .38 S&W rounds. Of course, the Merwin Hulbert revolvers were manufactured for the original lower pressure black-powder loadings of these cartridges. Saw-handled grip frames were standard, although some were manufactured with the distinctive Pocket Army type pointed "skullcrusher" bird's-head grip frames, and these will generally bring a premium. Most common barrel length for most models is 3-1/2", with 5-1/2" barrels somewhat scarcer in most models, and 2-3/4" barrels quite scarce and worth a premium. A number of police departments purchased small frame Merwin Hulbert revolvers in the late 19th century. Department marked guns will bring a premium.

Terminology alert—note that the .44 caliber "Pocket Army" model is a large-frame, and is listed in the section above.

The .22 Merwin Hulbert revolver is the only one not to use the MH twist-open system. It is, instead, a tip-up revolver closely resembling the S&W Model One.

First Pocket Model Single-Action
Spur-trigger, cylinder pin exposed at front of frame, round loading aperture in recoil shield (no loading gate), five-shot .38, scarce.

Exc.	V.G.	Good	Fair	Poor
—	1250	800	300	175

Second Pocket Model Single-Action

Spur-trigger, cylinder pin exposed, sliding loading gate, five-shot .38.

Exc.	V.G.	Good	Fair	Poor
—	1000	650	285	150

Third Pocket Model Single-Action Spur-Trigger

Exc.	V.G.	Good	Fair	Poor
—	950	600	225	125

Third Pocket Model Single-Action w/Trigger Guard

Five-shot .38.

Exc.	V.G.	Good	Fair	Poor
—	1000	675	285	150

Double-Action Pocket Model, medium frame

Usually .38 five shot. Scarce .32 seven shot will bring a 25 percent to 50 percent premium. Patent marked folding hammer spur will bring a small premium.

Exc.	V.G.	Good	Fair	Poor
—	900	900	225	150

Double-Action Pocket Model, small frame

.32 cal. five shot. Patent marked folding hammer spur will bring a small premium.

Exc.	V.G.	Good	Fair	Poor
—	800	550	185	125

Tip-up .22 Spur-Trigger

.22 rimfire, a S&W patent infringement, looks similar to S&W Mod. One Third Issue. Scarce. "Made by Merwin Hulbert & Co. for Smith & Wesson" marking will bring a small premium.

Exc.	V.G.	Good	Fair	Poor
—	1000	650	275	175

Merwin Hulbert Rifles

Very similar in design to Hopkins & Allen single-shot breech loaders. Advertised in .22 and .32 rimfire, as well as .32 WCF, .38 WCF, and .44 WCF. May have been offered in .32-40 and .38-55 chamberings. A 20 ga. shotgun barrel was offered separately for these rifles. Features included set trigger, rebounding hammer, pistol grip stock, & takedown. Seldom encountered, the Merwin Hulbert name on these should bring a premium over standard Hopkins & Allen single-shot rifles. A small frame "Merwin Hulbert & Co's. Junior" rifle was also offered, chambered for .22 rimfire.

METROPOLITAN ARMS CO.

New York, New York

Established in February 1864, this company manufactured copies of the Colt Model 1851 and 1861 Navy Revolvers, as well as copies of the Colt Model 1862 Police Revolver. Two of the firm's principle officers were Samuel and William Syms (formerly of Blunt & Syms) and it is believed that they were responsible for production. Curiously, although most Metropolitan pistols were produced during the 1864 to 1866 period, the company itself was not dissolved until 1920.

1851 Navy Revolver

A .36 caliber percussion revolver with a 7.5" octagonal barrel and 6-shot cylinder. Blued, case hardened with walnut grips. The barrel marked "Metropolitan Arms Co. New York." Approximately 6,000 of these revolvers were made during the 1860s. Those bearing H.E. Dimick markings are worth considerably more than the standard marked examples.

MONDRAGON
Mexico City, Mexico

Firearms designed by Manuel Mondragon were produced on an experimental basis first at St. Chamond Arsenal in France and later at SIG in Neuhausen, Switzerland. The latter company was responsible for the manufacture of the two known production models; the Model 1890 and 1908.

The Model 1890 Mondragon semi-automatic rifle holds the distinction of being the first self-loading rifle to be issued to any armed forces.

Belt Revolver

A .32 rimfire caliber revolver with a 4", 5", or 6" octagonal barrel and 7-shot cylinder. The barrel and cylinder blued, the brass frame sometimes silver-plated with walnut grips. The barrel marked "D. Moore Patent Sept. 18, 1860." Several thousand were manufactured between 1861 and 1863.

COLT'S FRONTIER SCOUT .22 CALIBER REVOLVER

Due to a revival of interest about the Old West, Colt reintroduced their discontinued Single Action Army revolver in 1955. The company then decided that they needed a .22 caliber single action revolver to capitalize on the interest in .22s and to compete with Ruger's newly-introduced Single-Six in the rimfire arena. Thus, the Colt Frontier Scout was born in 1957. The Frontier Scout was a little smaller than a SAA and weighed about 24 ounces. And its price was within the reach of most sportsmen, at $49.50 retail.

The Colt Scout line eventually grew to comprise the following models:

Q Series

The Frontier Scout revolver was introduced in 1957. This was the Q series, also known as the "Duo-Tone" model. These were characterized by the "in-the-white" aluminum alloy receiver and by serial numbers that began with the letter "Q". The cylinders and barrels were made of steel and blued. The grip frame was also aluminum but finished dark to match the barrel and cylinder.

F Series

The F series Frontier Scout followed the Q revolvers and for a time was produced concurrently with them. Early F series guns had the same "in-the-white" receivers as the Q revolvers but were later offered in all blue finish. (Duo-Tone revolver production ceased in 1961 with about 40,000 having been made.) Barrel lengths were 4-3/4 inches and 9-1/2 inches (the Buntline Scout). Chamberings were .22 Long Rifle and .22 Winchester Magnum Rimfire and as combinations with cylinders in both calibers.

K Series

The K series Frontier Scouts were introduced in 1960 and offered in a bright nickel finish with a heavier receiver and grip frame than the Q or F series. Receivers and grip frames were made of Zamak alloy. Barrel lengths and chamberings were similar to those of the F revolvers. All K series revolvers were fitted with plain walnut grips and most were shipped from the factory in wood presentation cases lined with red fabric.

P Series

The P series or "Frontier Scout '62" revolvers (introduced in 1962) featured a new "Midnight Blue" finish and the heavier Zamak alloy receiver and grip frame of the K series. The new finish on the grip frame and receiver was apparently a painted or dipped coating that was glossy black. Unfortunately, this finish was highly variable with regards to durability. Many revolvers have survived with mint finish but others, even some unfired specimens, have suffered significant damage from minor handling.

G (L) Series

The G series revolvers were called the Peacemaker 22 and New Frontier 22 and were introduced in 1970. These guns were a major change in Colt's .22 single action revolver line. They more resembled the full size Single Action Army revolvers because the receivers were made of steel and were handsomely finished in a nice case hardened coloring. (Grip frames continued to be made of aluminum alloy.) The Peacemaker 22 had fixed sights like the previous Frontier Scouts, but the New Frontier 22 used a ramped front sight and the adjustable Accro rear sight that was used on many other Colt handguns at the time.

GS Series

Production of the New Frontier 22 ceased in 1977-78 as well but was started up again in 1982 with the GS series. These were the same as the earlier G series New Frontiers with the addition of a cross-bolt safety which, when activated, would prevent the hammer contacting the firing pin. The GS revolvers were only produced in .22 LR. Barrel lengths were 4.4 inches, six inches and 7-1/2 inches. Initially, all production was the same blue and color case hardened finish as the earlier G series. However, in the last year of production the finish was changed to "Full Blue."

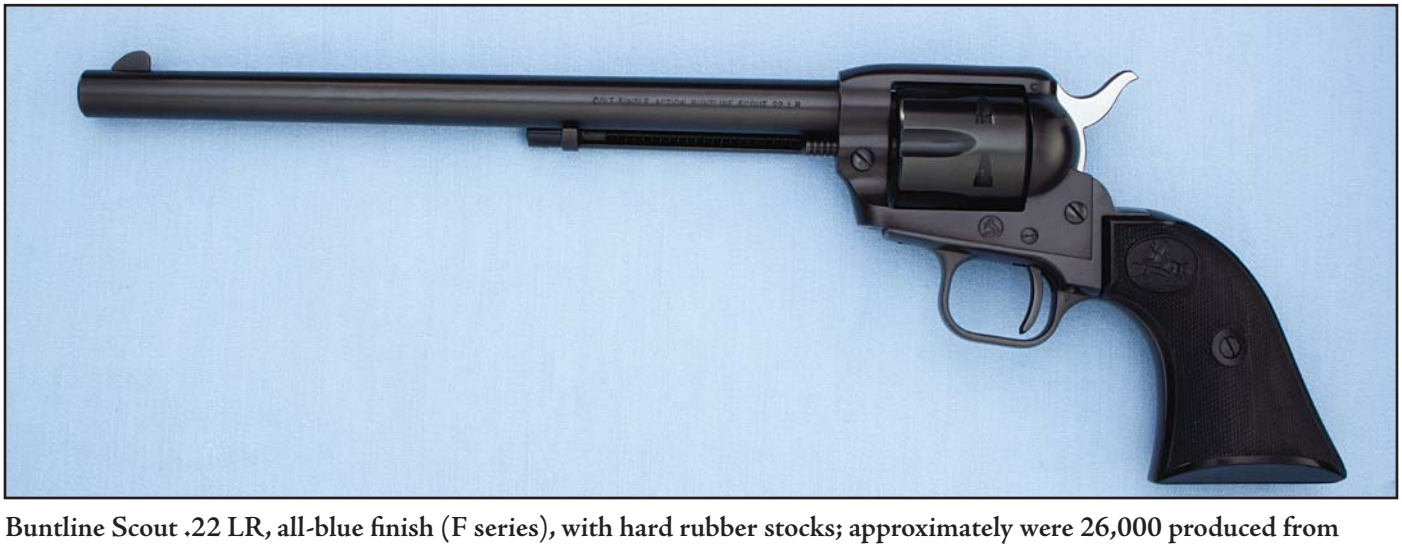
The Colt Frontier Scout and related models offers a fertile field for the gun collector. Since they were made for a relatively limited time, it is possible for the searcher to find representative specimens of most variations. On the other hand, there are enough unusual types to keep the collector's interest up and the prices are much more moderate than those of the larger Single Action Army revolvers. I hope you enjoy the photos of the Colt Scouts in the following pages.

– Bruce Buckner, Jr.

Editor's Note: See page 285 for more information on the Colt Scouts and its variants.

Frontier Scout "duotone" model (Q & F series) with hard rubber stocks; about 40,000 produced between 1957 and 1961.

Frontier Scout "duotone" with factory installed plain walnut stocks; only about 300 duotone revolvers were shipped with wood grips (1959-1960).



Buntline Scout .22 LR, all-blue finish (F series), with hard rubber stocks; approximately were 26,000 produced from 1958 to 1971.

Frontier Scout .22 Magnum, all-blue finish, with hard rubber stocks. About 20,000 such revolvers were manufactured between 1959 and 1968.

Buntline Scout '62 "Midnight Blue" .22 CAL convertible revolver (.22 LR and 22 Magnum cylinders) with Stag-Lite stocks. Only about 250 such revolvers were produced, all of them in 1969 and 1970.

Frontier Scout all-blue 22 (.22/.22 Magnum) convertible with plain walnut stocks; about 1300 of this variation were produced in 1964 and 1965.

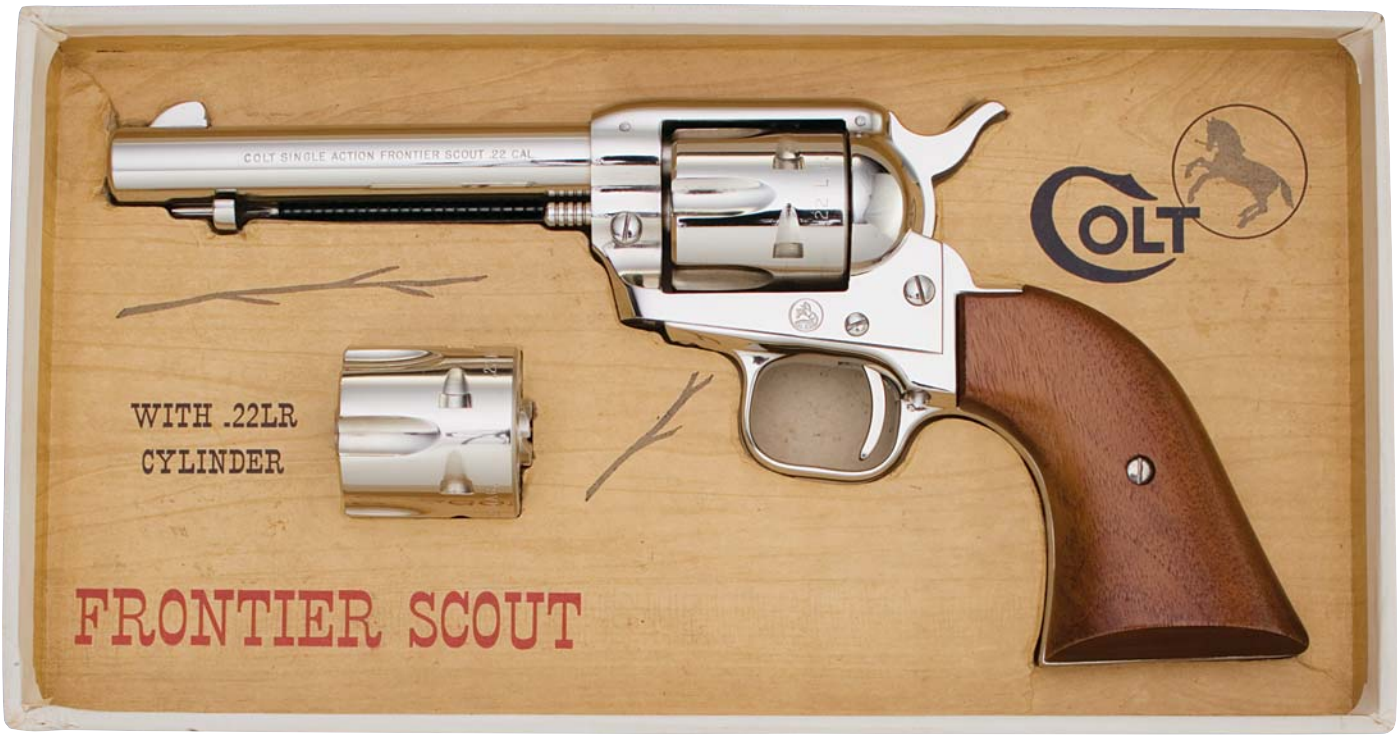
Buntline Scouts in .22 LR (bottom), .22 Magnum (center) and .22 CAL (.22 LR and .22 Magnum cylinders). Bore dimensions were the same for the .22 Magnum and 22 CAL guns, but slightly larger than the .22 LR guns.

Detail barrel markings of Buntline Scouts in .22 LR (bottom), .22 Magnum (center) and .22 CAL (top). Guns marked 22 CAL were shipped from the factory with .22 LR and .22 Magnum cylinders.

Frontier Scout nickel finish (K-series) cased pair with consecutive serial numbers, marked .22 LR and .22 Magnum. Most consecutively numbered pairs were shipped in 1960 or 1961. Later pairs were not consecutively numbered.

Buntline Scout nickel finish .22 LR with plain walnut stocks in Colt display case. Walnut stocks were standard on the nickel finish Scouts and they were usually shipped in the wood display cases. About 2600 nickel Buntline .22 LR guns were shipped from 1961 to 1970.

Frontier Scout (.22 LR) and Buntline Scout (.22 Magnum) nickel finish with plain walnut stocks, shipped as a cased pair (not consecutively numbered) in 1962. Cased pairs were offered in many variations of calibers and barrel lengths.

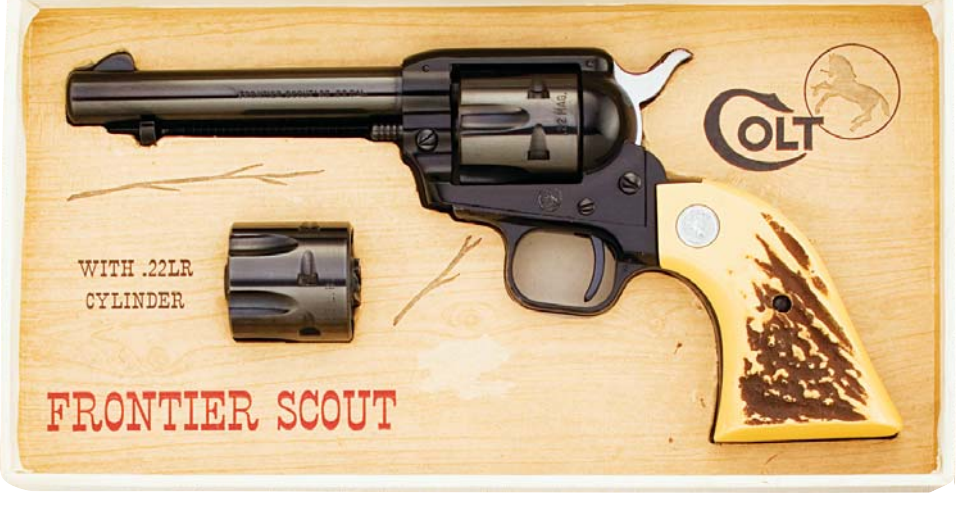


Frontier Scout nickel finish .22 CAL convertible (.22 LR and .22 Magnum cylinders) with plain walnut stocks (about 12,000 produced between 1964 and 1970).

Frontier Scout '62 "Midnight Blue" revolvers with Stag-Lite stocks, consecutively serial numbered, shipped in "Matched Pair" box. Both are .22 LR. There were only about 100 such matched pairs shipped in these boxes. The corners of this box were evidently taped at some time possibly to prevent damage.

Frontier Scout '62 "Midnight Blue" .22 LR revolver with Stag-Lite stocks in late production box. This type of box was used from 1962 until 1970 for single and dual cylinder (convertible) revolvers.

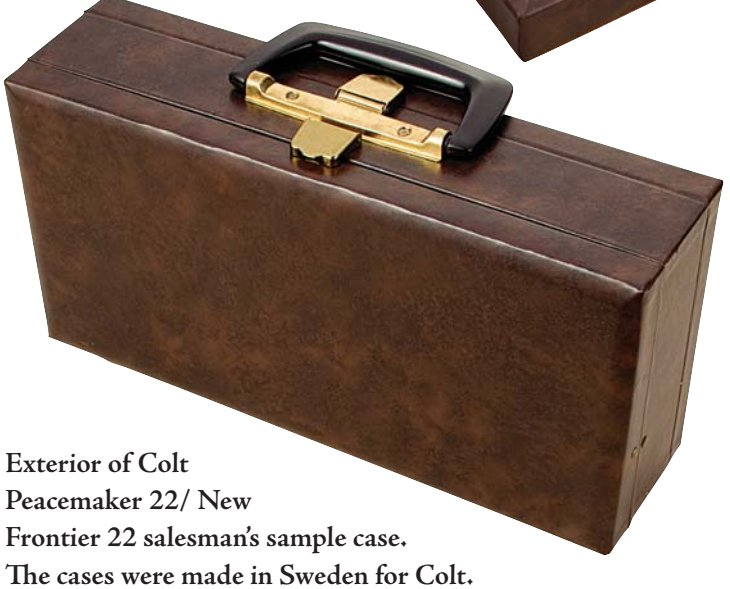
Frontier Scout '62 "Midnight Blue" (P series) with Stag-Lite stocks in early "picture" box. This colorful box was only used for the first two years of production (1962-63) and then was superseded by a tan two-piece box.



Frontier Scout '62 "Midnight Blue" .22 CAL convertible revolver (.22 LR and .22 Magnum cylinders) with Stag-Lite stocks in late production box. This configuration was the most common of the '62 Scouts, with about 33,000 being shipped between 1964 and 1970.

Peacemaker 22 and New Frontier 22 (G series), both with 4 ¾ inch barrels in Colt salesman's sample case. This case is one of the rarest items relating to the Colt single action .22 caliber revolvers. Only about 14 are known to exist.

Detail photo of the Colt Peacemaker 22/New Frontier 22 salesman's sample case showing the inscription on bottom.



Exterior of Colt Peacemaker 22/ New Frontier 22 salesman's sample case. The cases were made in Sweden for Colt.

Peacemaker 22 Dual Cylinder (.22 LR and .22 Magnum) with 6 inch barrel in factory box with plain cardboard sleeve, yellow Magnum cylinder box, revolver manual, warranty card and Handling the Handgun booklet.

Detail of right side of the receiver with the loading gate open to show the cross-bolt safety feature in 1980's New Frontier 22 revolvers. The safety prevented the fall of the hammer while loading the revolver and was automatically disengaged when the hammer was brought to full cock.

Buntline Scout '62 "Midnight Blue" .22 Magnum revolvers, consecutively serial numbered and cased. About 3200 .22 Magnum '62 Buntlines were produced; however, the numbers that were shipped as consecutive pairs is not known.

Peacemaker Buntline 22 (7-½ inch barrel) with manual, warranty card and Handling the Handgun booklet. Approximately 1600 such revolvers were produced from 1972 to 1976. Total production of Peacemaker and New Frontier 22 revolvers was about 191,000 from 1970 to 1976.

Peacemaker 22 (top) and Peacemaker 22 Dual Cylinder (.22 and .22 Magnum) with 4.4 inch barrels in early and late type boxes with manuals and other papers. The stryofoam boxes (bottom in photo) were introduced about 1974.

Peacemaker 22 revolvers in .22 LR only and Dual Cylinder models with all four barrel lengths that were produced: 4.75 inches, 4.4 inches, 6 inches and 7.5 inches. Total production of Peacemaker 22 revolver was about 90,000 between 1970 and 1977.

New Frontier 22 revolvers in .22 LR only and Dual Cylinder models with all four barrel lengths that were produced: 4.75 inches, 4.4 inches, 6 inches and 7.5 inches. Approximately 100,000 New Frontier 22 revolvers were produced between 1971 and 1977.

New Frontier 22 Cross-Bolt Safety (GS series) blue/case-colored finish revolvers with 4.4, 6 and 7.5 inch barrels. Approximately 19,000 cross-bolt New Frontiers were produced from 1982 to 1986, of which about 75% were finished in blue and color case hardening.

New Frontier 22 Cross-Bolt Safety revolvers with full blue finish and 4.4, 6 and 7.5 inch barrels. Approximately 6400 revolvers were produced in full blue finish.

New Frontier Buntline 22 Cross-Bolt Safety revolvers showing the three finishes produced. Top - full blue. Center: full blue with matte finished barrel. Bottom: blue & color case hardened. The matte finished barrel revolvers were produced very late in the model series and were never catalogued.

New Frontier 22 Cross-Bolt Safety revolvers with 4.4 inch barrels with ramped (top) and blade (bottom) front sights. The barrels with the blade front sights were overruns from the production of the John Wayne commemorative 22 revolvers (1983). About 150 such revolvers were reported to have been produced.

Colt used wood cases with cloth lining for most of the nickel Frontier Scout and Buntline Scout guns and for sets of nickel and '62 "Midnight Blue" revolvers. The cases had the Colt logo on the outside lid and on the cloth lining the inside lid.

Colt wood cases showing a John Adams-engraved Peacemaker 22 and a set of nickel Frontier Scouts. Cases were available as aftermarket items for single guns and for pairs of Frontier Scouts, pairs of Buntline Scouts and Frontier/Buntline Scout sets.

A selection of manuals, warranty cards, booklets and various other paper items that were shipped with Colt single action 22 caliber revolvers from 1957 to 1986 along with a few advertisements and dealer specification charts.

A selection of shipping boxes are shown for various Frontier Scout, Buntline Scout, Peacemaker 22 and New Frontier 22 revolvers from 1957 to 1986.

Beginning in 1930, the Mossberg company manufactured a variety of utilitarian single-shot and repeating bolt-action rifles. Later they introduced a similar line of semi-automatic rifles. As these arms were intended for extensive use and were low-priced, the values for them may be categorized as listed.

NAVY ARMS COMPANY

Ridgefield, New Jersey

Not a manufacturer but an importer. Founded in 1957 by Val Forgett to enhance the shooting of blackpowder firearms without destroying the originals. The first replica was the Colt 1851 Navy. Thus, the name of the new company, "Navy Arms." In the early 1980s Navy Arms began importing surplus firearms from European countries. Navy Arms continues to offer both blackpowder replicas and foreign imports. For a short period of time the company imported double-barrel shotguns. This was discontinued in 1990. Most if not all of the guns listed below are also to be found under the manufacturers' names as well as those of other importers.

SHOTGUNS

NOBLE

Haydenville, Massachusetts

In business between 1946 and 1971, this company manufactured a variety of plain, utilitarian firearms. In general, these arms are all worth approximately the same, that is, less than $200 in excellent condition. Noble firearms represent an attractive opportunity for the beginning collector as most can be had very inexpensively.

RIFLES

Model 10

A .22 caliber bolt-action single rifle with a 24" barrel. Pistol grip stock with no checkering. Open sights. Produced in the late 1950s.

Exc.	V.G.	Good	Fair	Poor
75	60	50	40	30

Model 20

A .22 caliber bolt-action rifle fitted with a 22" barrel. Open sights. Produced from the late 1950s to the early 1960s.

Exc.	V.G.	Good	Fair	Poor
75	60	50	40	30

Model 33

This is a .22 caliber slide-action rifle fitted with a 24" barrel and tubular magazine and Tenite stock. Produced from the late 1940s to the early 1950s.

Exc.	V.G.	Good	Fair	Poor
80	70	60	50	40

Model 33A

Same as above but fitted with a wood stock.

OBREGON
Mexico City, Mexico
This is a .45 caliber semi-automatic pistol with a 5" barrel. Similar to the Colt M1911A1 but with a combination side and safety latch on the left side of the frame. The breech is locked by rotating the barrel, instead of the Browning swinging link. This unusual locking system results in a tubular front end appearance to the pistol. Originally designed for the Mexican military it was not adopted as such and only about 1,000 pistols were produced and sold commercially. The pistol is 8.5" overall and weighs about 40 ozs. The magazine holds seven cartridges. This is a rare pistol; an independent appraisal is suggested prior to sale.

OJANGUREN Y VIDOSA
Eibar, Spain
This typical Eibar company produced mediocre firearms from the early 1920s and was forced out of business during the Spanish Civil War.

Apache (Model 1920)

A typical Eibar Browning copy that is chambered for the 6.35mm cartridge. It is of the typical low quality associated with most Spanish arms of this era. The slide is marked "Pistole Browning Automatica Cal. 6.35 Apache." The finish is blued, and the plastic grips have a head with a beret and the word "Apache" molded into them.

Courtesy James Rankin

275	225	190	100	75

Ojanguren

The trade name this company used to cover the line of revolvers they produced in the 1930s. They produced two in .32 caliber and two chambered for the .38 Special cartridge. They are similar in appearance and have barrel lengths of either 3" or 6". The finishes are blued, and they have plastic grips. One of the .38 caliber models—the "Legitimo Tanque"—is a reasonably well-made gun that was popular with the Spanish target shooters. These guns have little collector value, little practical value and are all priced alike.

Exc.	V.G.	Good	Fair	Poor
175	125	100	75	50

Tanque

A blowback-operated semi-automatic chambered for the 6.35mm cartridge. It has a 1.5" barrel and is actually an original design, which was rarely found on Eibar guns of this period. It has an oddly shaped slide, and the barrel is retained by means of a screw in the front of the frame. It has a 6-shot magazine, and the slide is marked "6.35 Tanque Patent." The plastic grips have a tank molded into them and the word "Tanque," as well as the letters "O&V."

Springfield Armory

Omega Pistol
A high-grade target-type pistol that is patterned after the Colt Model 1911 pistol, with marked improvements. It is chambered for the .38 Super, 10mm, and the .45 ACP cartridges. The barrel is either 5" or 6" in length and has polygonal rifling. The barrels are furnished either ported or plain and feature a lockup system that eliminates the barrel link and bushing associated with the normal Browning design. This pistol has a dual extractor system, adjustable sights, and Pachmayr grips. It was introduced in 1987.

P

P.38

THE GERMAN WWII SERVICE PISTOL

NOTE: For history, technical data, descriptions, photos, and prices, see the *Standard Catalog of Military Firearms.*

WALTHER COMMERCIAL

The Commercial version of the P.38 is identified by commercial proofmarks of a crown over N or an eagle over N. Production started at around serial number 1000 and went through serial number 26659. This was the first of the commercial pistols and was a high-quality, well made gun with a complete inscription on the left slide. A few of these early pistols were equipped with checkered wooden grips. The quality decreased as the war progressed. There are many variations of these commercial models and values can range up to more than $30,000. It is suggested that these pistols be appraised and evaluated by an expert. For post-war Walther P.38 pistols see the Walther section.

A few of the Walther Commercial Model variations are listed.

775	575	400	—	—	—

PARA PXT SERIES PISTOLS

NOTE: In 2004 the company introduced a new extractor called the Power Extractor (PXT). The company also added a number of new finishes and features for its PXT line. All Para pistols have integral ramp barrels that are of match grade quality. All pistols have full-length guide rod, match trigger, flared ejection port, extended slide lock safety, beavertail grip safety, cocobolo stocks with gold medallion and high-visibility, low-mount, dovetail, three-dot sights.

Para has introduced five finishes:

1. Sterling—All stainless steel, black slide with polished sides.
2. Stealth—Black slide, black frame with black fire controls.
3. Black Watch—Black slide, green frame with green fire controls on hi-cap models, and black controls on single- stack models.
4. Regal—Black slide, black frame with stainless steel fire controls.
5. Spec Ops—Green slide, green frame with black fire controls.

SINGLE ACTION, SINGLE STACK MODELS

Model OPS

Chambered for the .45 ACP cartridge and fitted with a 3.5" barrel. Stainless steel receiver. Magazine capacity is 7 rounds. Weight is about 32 oz.

PARKER BROS.

Meriden, Connecticut

Perhaps the best known of all American shotgun manufacturers. Established by Charles Parker shortly after the Civil War, this company has produced a wide variety of shotguns in a number of different styles over the years. In the early 1930s the company was purchased by Remington Arms Company.

WARNING NOTE: Parker shotguns are among the most collectible of American-made shotguns. Both the beginning and the veteran collector should be aware that originality and condition are absolutely critical in establishing such high values for these shotguns. There are numerous upgraded and refinished guns that are represented as original. Beware that such misrepresentations exist because refinished and upgraded Parker guns should sell for as much as 50 to 75 percent below the price of an original gun. Extreme caution should be exercised and we would recommend that an expert be consulted. Even the most advanced collectors may benefit from such consultations. Also, the prices indicated for guns in excellent condition may fluctuate drastically, especially in high grade or small bore guns, due to their extreme rarity.

In addition, uncommon extras such as single triggers, ventilated ribs, beavertail forearms, straight-grip stocks, and skeleton steel buttplates may add substantial value to an individual gun. Extra sets of factory barrels that were installed at the time of delivery will add an average of a 30 percent premium. This

premium will increase with grade and gauge; the higher the grade and smaller the gauge the higher the premium.

NOTE: Letters of authenticity are available. These letters are a must in order for any Parker gun to attain maximum value. Contact: the Exec. Secetary Parker Gun Collectors Association, 8825 Bud Smith Road, Wake Forest, SC 27587. FAX: 919-554-8120. The letter is $25 for members of the PCGA and $40 for non-members.

Editor's Comment: We now have reliable information on the production totals of Parker gauges and grades. This information comes from the book; *The Parker Story* by Gunther, Mullins, Parker, Price, and Cote (1998). **These totals reflect guns built with modern steel barrels *only*** and are based on factory records. It is the editor's opinion that while production statistics are interesting it is the relative number of guns produced in each grade and bore that are the most significant.

VH

A 12, 16, 20, 28 or .410 bore boxlock double-barrel shotgun manufactured in a variety of barrel lengths with double triggers and extractors. Blued, case hardened receiver with a walnut stock. Only 2,297 guns had single triggers. Only 3,983 guns had straight grip stocks.

*Approximately 78,659 were made: 10 gauge—20, 12 gauge—51,901, 16 gauge—14,446, 20 gauge—10,406, 28 gauge—1,417, .410 bore—469.

NOTE: Also made with automatic ejectors and known as the Model VHE. The E suffix was used on all models to denote automatic ejectors.

Courtesy Bonhams & Butterfields

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
3500	1800	1500	1000	700

NOTE: VHE add 40 percent, 20 gauge add 60 percent, 28 gauge add 500 percent, .410 add 500 percent.

PH

Similar to the above, but with a small amount of scroll engraving. slightly better grade of walnut.

*Approximately 1,339 were made: 10 gauge—798, 12 gauge—839, 16 gauge—208, 20 gauge—204, 28 gauge—only 5, .410 bore—only 4.

Courtesy Bonhams & Butterfields

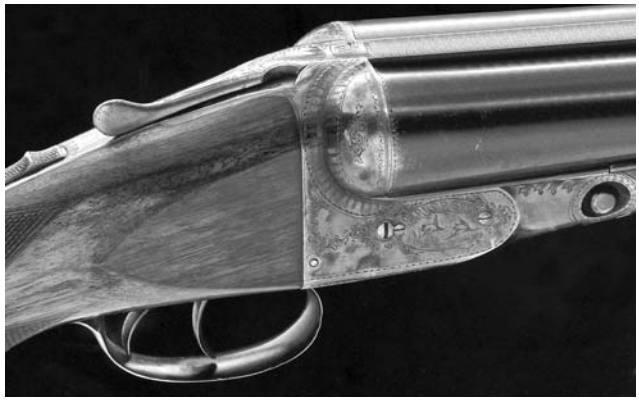
Exc.	*V.G.*	*Good*	*Fair*	*Poor*
3500	2200	1700	1200	900

NOTE: PHE add 40 percent, 20 gauge add 45 percent, 28 gauge add 500 percent.

GH

Similar to the above, with a modest amount of scroll and game scene engraving and the barrels marked "Parker Special Steel." Only about 430 G grades were built with straight grip stocks.

*Approximately 4,291 were made: 8 gauge—11, 10 gauge—63, 12 gauge—2,501, 16 gauge—607, 20 gauge—990, 28 gauge—91, .410 bore—28.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
3900	2700	2200	1400	1000

NOTE: GHE add 35 percent, 16 gauge add 15 percent, 20 gauge add 40 percent, 28 gauge add 500 percent, .410 add 500 percent.

DH

As above, but more finely finished. Engraving coverage more profuse. Most modern D grade guns were fitted with Titanic barrels. Only about 280 were built with Parker single triggers, and only about 280 were built with ventilated ribs.

*Approximately 9,346 were made: 8 gauge—10, 10 gauge—45, 12 gauge—6,330, 16 gauge—1,178, 20 gauge—1,536, 28 gauge—187, .410 bore—60.

Courtesy Bonhams & Butterfields

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
6500	5000	4000	2000	1500

NOTE: DHE add 35 percent, 16 gauge add 10 percent, 20 gauge add 40 percent, 28 gauge add 500 percent, .410 add 500 percent.

CH

As above, with more scroll and game scene engraving coverage. Marked with Acme steel barrels. Only about 93 C grades had straight-grip stocks.

*Approximately 697 were made: 8 gauge—only 2, 10 gauge—only 9, 12 gauge—410, 16 gauge—105, 20 gauge—149, 28 gauge—only 16, .410 bore—only 6.

VALUE TRACKER: PARKER BROTHERS (MERIDEN, CT) SHOTGUNS

One thing is for certain: no one was ever looked down on for taking a Parker Brothers shotgun, no matter the grade, into the field. Parker shotguns are generally acknowledged to be among the finest in the world, and they are eagerly collected today. One might have thought, in this age of steel shot, that Parker shotguns have lost some of their glamour, but this is not so. Apparently the Parker shotgun, like a Rolls-Royce or a Duesenberg, is one of those things worth having, simply for the sake of having one – even in less than pristine condition.

PARKER REPRODUCTIONS

Japan

This company had exact reproductions of Parker D, DHE, B and A-1 Special shotguns made in Japan. They are of the finest quality and workmanship. The styles of engraving and features of these shotguns correspond exactly to the original Parker Arms.

D-Grade

This side-by-side shotgun is offered in 12 gauge, 20 gauge, and 28 gauge. Barrel lengths are 26" or 28" with sold matte rib. Stocks are select walnut with choice of pistol or straight grip. Choice splinter or beavertail forearms are offered. Single or double triggers are available as well. The receiver is case colored and scroll engraved with game scenes to match the original Parker DHE grade. Weight of 12 gauge is 6.75 lbs., 20 gauge is 6.5 lbs., and 28 gauge weighs 5.3 lbs.

12 or 20 Gauge

PEDERSOLI, DAVIDE

Brescia, Italy

Davide Pedersoli & C. was founded in 1957 by the late Davide Pedersoli. In the nearly half-century since, Pedersoli has established itself as a manufacturer of extremely high-quality replica and modern firearms. Pedersoli products are frequently marked with the importer's or retailer's name (e.g., Dixie Gun Works or Cabela's) rather than the Pedersoli brand, usually at widely varying discounts. Many muzzleloading rifles and pistols are available in kit form at reduced prices.

NOTE: Rapidly-fluctuating currency markets can result in values for newly-imported Pedersoli guns being 10-15 percent higher than the values listed below.

HANDGUNS

Mang In Graz Pistol

Recreation of single-shot percussion pistol made c. 1850 by Martin Mang. .38 or .44 caliber. Add 10 percent for target model, 20 percent for deluxe.

NIB	Exc.	V.G.	Good	Fair	Poor

NIB	Exc.	V.G.	Good	Fair	Poor
350	300	—	—	—	—

PERAZZI

Brescia, Italy

This company was founded in 1965. During the 1970s Ithaca and Winchester imported and sold Perazzi shotguns. Perazzi has now taken over its own importation and distribution in the United States with the creation of Perazzi USA, Inc. Many shooters consider the Perazzi to be the finest currently produced shotgun in the world.

Perazzi has an extensive variety of models to choose from. In addition, each model may be available in different grades. These grades are based on the type of finish, engraving, and wood quality. The vast majority of Perazzi shotguns that are sold in this country are Standard Grade guns. According to Perazzi USA, these Standard Grade guns account for approximately 98 percent of North American sales. Therefore, it is unlikely that the shooter or collector will encounter high-grade Perazzi guns. It should be pointed out that in some models no Extra Grade or Extra Gold Grade shotguns have ever been sold in the United States.

For the benefit of the reader an approximate description of each grade follows. It is a general description because the Perazzi customer may order practically any combination of finishes or engraving patterns he or she desires. Use this list as a general guide. It is strongly suggested that anyone wanted to know more about Perazzi guns buy a copy of Karl Lippard's book, *Perazzi Shotguns*. He can be reached at P.O. Box 60719, Colorado Springs, CO, 719-444-0786.

PRICING NOTE: Because of the difficulty in pricing grades above the SCO Grade because of their rarity and custom configurations these grades are not priced.

OUT-OF-PRODUCTION SHOTGUNS

NOTE: Very high premiums on early SCO and higher grades.

COMP1-SB TRAP

This model is a single barrel trap gun in 12 gauge only with 32" or 34" vent rib barrel.

Standard Grade

NIB	Exc.	V.G.	Good	Fair	Poor

SHO Model

NOTE: This over-and-under sidelock model is available in 12 gauge only in both Type 1 and Type 2 configurations. Type 1 does not have rebounding firing pins and is worth approximately 50 percent less than Type 2 models that are fitted with rebounding firing pins. There are no parts available in this country or at the factory for Type 1 guns. An expert appraisal is recommended for this model due to its unique features.

The SHO model features a silver finish with fine scroll engraving with game scenes to customer's specifications. Select walnut stock built to customer's dimensions with fine line checkering. A custom built shotgun. Special order only. An expert appraisal is recommended for this model due to its unique features.

DHO Model

This is a side-by-side shotgun offered in 12 gauge only. It has full sidelocks and a silver receiver finish with scroll and game scene engraving of the same quality as the SHO Model. Fancy walnut stock with fine line checkering. An expert appraisal is recommended for this model due to its unique features.

NOTE: There are no replacement parts available for the model.

DHO Extra Gold

Available in any gauge and barrel length combination. Only the finest presentation walnut and checkering. A totally custom built shotgun. Special order only. An expert appraisal is recommended for this model due to its unique features.

NOTE: There are no replacement parts available for this model.

CURRENT PRODUCTION SHOTGUNS

MX9

Introduced in 1993 this model features removable inserts on rib to adjust point of impact and a walnut stock with adjustable comb. Offered in 12 gauge with 32" or 34" barrel with screw-in chokes in Trap configuration and single barrels in Trap/Combo models. A competition version is also offered with unique vent rib inserts to correct for point of impact.The trigger group is removable. Available in several different grades of ornamentation.

COMPETITION MODELS

Competition versions are over-and-under shotguns in trap, skeet, pigeon, and sporting models. Stock dimensions are based on the particular model chosen. Trap models feature trap stock dimensions and forearm designed for that purpose. The other models also have their own particular specifications. However, prices are based on a common style referred to by Perazzi as Competition. Thus, all models within this group are priced the same regardless of specific type.

Mirage Special

This model features an adjustable trigger and is available in 12 gauge with choice of 27.5", 28.375", 29.5", or 31.5" ventilated rib barrels.

Standard Grade

NIB	Exc.	V.G.	Good	Fair	Poor

Arminius Waffenfabrik
Zella-Mehlis, Germany

This firm produced revolvers bearing the trade name "Arminius." The revolvers manufactured by Pickert of the double-action type, with or without exposed hammers. Some models are fitted with ejectors, while others have removable cylinders. Calibers and barrel lengths vary. After WWII, the trade name was acquired by Hermann Wiehauch.

Arminius 7.65mm

A five-shot concealed hammer revolver in 7.65mm caliber. The Arminius head is on the grips.

PIEPER, HENRI & NICOLAS

Liege, Belgium

Originally founded by Henri Pieper in 1859, the company was reorganized in 1898 when his son, Nicolas, assumed control. The firm is perhaps best known for a series of semi-automatic pistols that are listed below, but Pieper also manufactured a bewildering variety of drillings, combination guns, cape guns, rook rifles, salon rifles and even volley guns. These guns must be evaluated on their own merits, and their value is strictly a function of what the market will bear.

Pieper Model 1907

A 6.35 or 7.65mm semi-automatic pistol featuring a hinged barrel assembly 2.5" in length. Receiver and barrel are blued, the grips are of hard rubber with the firm's trademark cast in them. The Model 1907 variation does not have a hinged barrel assembly. The Model 1908 is also known as the "Basculant," and the Model 1918 as the "Demontant."

Courtesy Orvel Reichert

Exc.	V.G.	Good	Fair	Poor

Model 1908/Basculant

This is a tipping barrel pistol chambered for the 6.35mm Auto cartridge. Similar in appearance to the Model 1907 this model had several improvements. The front end of the barrel was retained by a pivot bolt and the recoil spring rod had a hook that engaged the lug on the slide.

Courtesy Orvel Reichert

Pieper Bayard Revolver

In competition with the Nagant gas seal revolver, Henri Pieper developed a superior design. Revolvers of this type have 5" barrels and are chambered for 8mm cartridges. The first model of this revolver had an automatic ejection system, while the second version utilized a swing-out cylinder. Standard finish is blued, with checkered hard rubber grips.

JEEPERS CREEPERS, WHERE'D YOU GET THAT PIEPER?

BY DAN SHIDELER

Henri Pieper, whose prodigious output included the Pieper Volley Gun.

Sometimes it seems like I live my life in a small cardboard box in the middle of a swamp. There's just no other way to explain how I manage to miss things that are right under my nose. Things like the LaPorte County, Indiana, Historical Society Museum, for example.

I first heard of the LaPorte County Historical Society's William A. Jones Firearms Collection from my brother, who casually mentioned it during a conversation two years ago. Had I ever been there, he asked? Nope. Tell me more. And this is what he told me:

Back around the turn of the century, Laporte, Indiana, was a popular playground for Chicago's industrial elite. With its clean air, tranquil lakes and small-town charm, it's no wonder that LaPorte eventually attracted the attention of a fellow named William A. Jones, owner of a sizable iron foundry in the Windy City. When Jones visited LaPorte near the close of the nineteenth century, he fell in love with the place.

When he retired from the foundry business, William A. Jones was free to indulge his three passions: travel, firearms, and LaPorte, Indiana. First things first: he immediately built a mini-mansion on the shores of LaPorte's Pine Lake. Then he set off to search the world for rare and interesting guns, eventually amassing a collection of nearly a thousand of the coolest guns you've ever seen. When Jones died in 1921, he left his collection to the City of LaPorte, which in turn donated them to the Laporte County Historical Society.

Intrigued, I wasted no time in visiting the museum and found that my brother was right on the money. What a collection! I was so impressed that a photographed several of the museum's guns for the 16-page color section of the 17th edition of *Standard Catalog of Firearms*. Later, the museum invited me back to give tours of the Jones Collection.

During these tours people would frequently ask me, "What's the most interesting gun in the museum?" And I'd say, "That's simple. To me, it's the seven-shot Pieper Volley Gun."

Never heard of the Pieper Volley Gun, have you? Neither had I until I stumbled across it in the LaPorte museum. If the LaPorte museum's W. A. Jones Collection of Antique Firearms contains the damndest stuff you've ever seen, then their Pieper Volley Gun has got to be the double-damndest.

Most of us know the name Pieper from the variety of inexpensive, single-shot Flobert rifles that Pieper and other Belgian gunsmiths churned out by the boatload. There's a tendency to dismiss these rifles, and all vintage Belgian arms, as junk, which they're not. After all, when John M. Browning was looking for someone to build his Auto-5 shotgun after Winchester gave it a thumbs-down, he chose Belgium's Fabrique Nationale. And, more tellingly, American shooters embraced Pieper's little .22 Flobert rifles so enthusiastically that Winchester Repeating Arms felt compelled to go into the low-end .22 market with their Models 1900 and 1902 single-shots. If shooters back then didn't turn up their noses at Belgian guns, I'm not so sure we should do so now.

Were all turn-of-the-century Belgian guns top-quality? Certainly not. Neither were all American guns. My point here is that it's dangerous to dismiss an entire class of firearms unilaterally, because sooner or later (usually sooner) an exception will pop up and bite you where you sit. The Pieper Volley Gun is just such an exception.

Henri Pieper was born in the German town of Soest in the Westphalia region on October 30, 1840. After receiving some basic training in machining and a stint at a woolen mill, he apprenticed with a gunsmith named Warstein. A telented metalworker with an interest in firearms, Pieper emigrated to Belgium in 1859 and subsequently mastered his craft in Herstal, Verviers and Liege.

Around 1866 Pieper opened his own firearms factory at #12 Bayard Street in Liege; he made rifle barrels. Apparently business was booming, for by 1870 his shop had grown to occupy 6,000 square meters. That same year he partnered with a barrelmaker named Nessonvaux in the Vesdre valley.

Henri Pieper seems to have a pretty good head for business. In 1887, he joined a conglomerate of high-profile Belgian arms makers including Jules Ancion, the Dumoulin brothers, Joseph Janssen, Pirlot-Frésart, Draws up-Laloux & Co., Albert Simonis and Emile and Leon Nagant. (Of these, American shooters are probably most familiar with the shotguns, cape guns and double rifles of Dumoulin and the famous Nagant gas-seal revolvers, which were probably designed by Pieper.) Along the way, Piper found also manufactured bicycles and one of the earliest automobiles, the so-called Pieper "Bicyclette." As if that weren't enough, Pieper also found time in his schedule to act as one of the co-founders of Fabrique Nationale, the largest armsmaker the world has ever seen.

Most Pieper firearms are stamped with the "ELG" proofmark that indicates Belgian origin, and often with other proofs as well. In addition, Pieper marketed firearms not only under his own name but under the following trademarks: Bayard; Eagle Gun Works; E.Leroy; Modified Diana; Diane; The Leader; Bayard Arms Company; Pieper Arms Company; Premier Arms Company; Damascus Compound; National Arms Company; Henry Arms Company; Royal Gun Works; Le Rationnel (sometimes seen as "The Rational"); Pieper Top Bolt; Schutz Marke; E-K; Eclipse Company; Metropole; Pieper's Compressed Steel; Monarch Arms Company; and probably many other trade names as well.

Although Henri Pieper held 69 Belgian patents, much of his firearms production was based on existing designs such as the Flobert rifle, the Warnant rifle, the Remington Rolling Block Rifle, and the Nagant revolver. I have also seen copies of the Stevens single-shot Lord pistol that bore the Pieper name, and it seems fair to say that Pieper was primarily a firearms maker and only secondarily a designer. After an all-too-brief lifetime of churning out hundreds of thousands of sporting arms and military weapons, he died (probably from overwork) on August 23, 1898, at only 57 years of age.

The Pieper company was subsequently reorganized as "Etablissements Pieper" and continued for a time under the direction of Pieper's son Nicolas. The strain of diversification, particularly in the area of automobiles, brought the company to its knees, and in 1905 the board of directors invited Nicolas Pieper to take his hat and go. The company was once again reorganized, this time as "Les Anciens Etablissements Pieper," and

moved to an entirely new factory in Herstal in 1907. The thrice-born company concentrated solely on the manufacture of weapons and sporting arms; it's estimated that at its peak, Les Anciens Etablissements Pieper was turning out 60,000 shotguns, 30,000 automatic pistols, 30,000 rifles and 12 million cartridges a year! This may explain my we find so many Pieper guns floating around. Les Anciens Etablissements Pieper actually survived both world wars – no mean feat when you're headquartered in Belgium – and continued making arms of nearly every description before winking out for good in 1956.

The Pieper Volley Gun that resides in the Laporte County Historical Museum (www.laportecountyhistory.org) is an odd duck indeed. It is based on the Remington Rolling Block Action, which was one the simplest, strongest single-shot actions of the late 1800s and one that successfully bridged the blackpowder and smokeless eras.

So what's a volley gun? Believe it or not, It's a gun that's intentionally designed to fire mutiple barrels at once. If you ever get the chance to see the 1960 movie *The Alamo* starring John Wayne as Davy Crockett and Richard Widmark as Jim Bowie, take a good look at what Richard Widmark is dragging around. It's a volley gun. To be specific, it's a Hollywood replica of the Nock Volley Gun, a seven-barrel .52-caliber flintlock boomer that fired all seven barrels simultaneously when the trigger was pulled.

Closeup of the receiver of the Pieper Volley Gun. Note the general resemblance to the Remington Rolling Block

The original Nock Volley Gun was built in 1779 for the Royal Navy. It was used to shred the sails of enemy ships at close range and to clear their decks by firing it, more or less indiscriminately, into the ranks of enemy sailors. I can't imagine what it must have been like to shoulder-fire seven 52-caliber barrels all at the same time, but it couldn't be an experience I'd care to repeat.

Actually, most of us have probably already seen a volley gun of sorts in person. Remember the old three-barreled percussion "Duck's Foot" pistol that was offered in magazine ads in the '70s and '80s? The Duck's Foot was a volley gun. It fired three .36-caliber balls all at once from three separate barrels arranged more or less in the shape of a duck's foot.. The pistol was usually offered in kit form and still shows up online from time to time. The original eighteenth-century Duck's Foot pistol was intended for use aboard ships, where a captain might need to keep a murderous mob of mutineers at bay.

Naval warfare wasn't what Henri Pieper had in mind when he built his volley gun. More likely he intended it as a market gun. Back before 1918, there were no bag limits on waterfowl, and many hunters made their living by shooting as many ducks as they could in a single day and taking them down to the local meat market to sell. Most market hunters used plain old everyday shotguns, but hardcore market hunters used punt guns or volley guns.

A punt gun, of course, was an enormous smoothbore with a caliber frequently larger, sometimes much larger, than one inch. It was loaded with as much as a half-pound of shot and lashed to the gunwale of a punt, a small skiff-like boat. You'd paddle or pole the punt gun toward the birds, point the front of the boat at them, then – Ka-blooey! Afterward, you'd pick up the dead birds with a long-handled net and bundle them off to market. (The LaPorte County Museum also has two punt guns in its collection.)

The Pieper Volley Gun must have served the same purpose. It has seven rifled .32-caliber barrels, all of which fire at once. There's a single pair of sights on top of its barrel cluster, which meant you couldn't do much precision shooting with it. When you saw a bunch of geese or ducks on the water, you simply aimed at the unlucky one in the middle and squeezed 'er off. You were bound to bag two or three birds at the least.

All of this sounds terribly shabby to us today, but the market hunter of the past never claimed to be a sportsman. He was a meat hunter, pure and simple, and if a punt gun or volley gun helped him put a roof over his head and bread on the table, he'd use one if he could afford it. But market hunters nearly wiped out several species of waterfowl, and the Migratory Bird Treaty Act of 1918 put an end to the practice forever.

In a rare print reference, the Pieper Volley Gun was advertised in the 1888 - 1889 Great Western Gun Works Catalog as "Pieper's 7-Shot Mitrailleuse," "mitrailleuse" being an old French word for a multi-barreled firearm. It was said to be "an accurate gun for 125 to 150 yard shooting" and "an excellent gun for wild geese and other wild game." The catalog boasted that the Pieper gun, which was available in .22 or .32 rimfire, "will throw bullets farther than any other shot gun will throw buck shot, and persons who only want a gun for geese, crane, turkey, etc., cannot get anything that will do the work as well." Further, the Pieper Mitrailleuse was said to have a spread of three feet at 125 yards, so it was admirably comprehensive. The gun retailed for an astounding $70, whereas you could order a Winchester Model 1886 Express Rifle in .50-95 for "only" $20.25. That makes the Pieper Volley Gun one of the most expensive guns of its day.

GREAT WESTERN GUN WORKS.

PIEPER'S SINGLE SHOT RIFLES.

PIEPER'S

7-SHOT MITRAILLEUSE.

The 1888-1889 Great Western Arms Catalog marketed the "Pieper's 7-Shot Mitrailleuse," also known as the Pieper Volley Gun.

I didn't have an opportunity to shoot the LaPorte Museum's Pieper Volley Gun, of course, as museums tend to frown on that sort of thing. But I was permitted to handle it and examine it rather closely. As near as I can tell, to fire the Pieper Volley Gun you opened the action by thumbing back the hammer and operating the action lever, which also serves as a trigger guard. (This is different from the action of the Remington Rolling Block rifle, on which the breechblock is retracted by a thumbpiece.) You'd then remnove the disclike cartridge carrier, insert seven cartridges into its chambers, put the whole thing back into the chamber and close the action lever to bring the breech into battery. You could then put the gun on half-cock or just squeeze the trigger. Then -- blammo! Seven at a single blow, just like the Brave Little Tailor.

To extract the fired shells, you had to open the action and remove the entire carrier, which is a separate piece fitted tightly to the barrel group. I guess you then had to poke out the empties with a stick or something.

I had supposed the Pieper Volley Gun in the LaPorte collection was a very rare piece, but it turns out that a similar Pieper Volley gun was recently offered by C. W. Slagle Antiques of Phoenix, Arizona. The Slage gun was chambered in .22 rimfire (known in Europe as the 6mm Flobert) and shows sign of use. The one in the LaPorte museum, however, looks as though it just left the factory. It's in virtually new condition and doesn't appear ever to have been fired.

As so often happens when I get to researching a particular firearm, now I want a volley gun. I wouldn't ever use it on waterfowl, of course, but for those 150-yard shots on turkey it'd be just the thing.

PILSEN, ZBROVKA

Pilsen, Czechoslovakia

Pocket Pistol

Essentially a Model 1910 Browning semi-automatic pistol without a grip safety, this pistol was of 7.65mm caliber and had a 3.5" barrel with a 6-round magazine. The slide is marked "Akciova Spolecnost drive Skodovny zavody Zbrovka Plzen." Standard finish is blued, the grips of hard rubber. Manufactured during the 1920s.

PIOTTI

Brescia, Italy

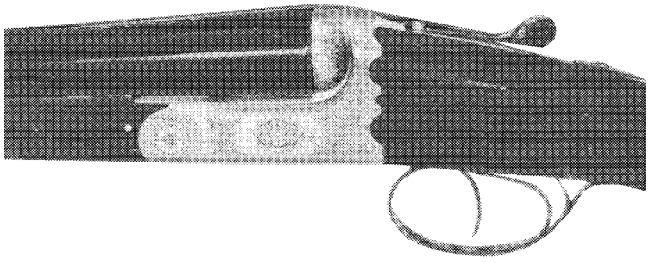
This Italian gunmaking firm is located in Gardone Val Trompia in the province of Brescia. Its shotguns are hand crafted and limited to a few each year. Each gun is made to individual specifications. Many consider them one of the best double shotguns made in the world today. Actions are either Anson & Deeley boxlock or Holland & Holland sidelock. Several features are offered on these shotguns at no additional cost: type of stock and forearm, barrel length and chokes, rib, action shape and finish.

Other features are considered extra cost options and will affect the value of the gun. There are: single triggers, detachable sidelocks, automatic safety, recoil pads, upgraded wood, engraving, and multi-gauge sets. With the exception of a few grades Piotti guns are available in 10, 12, 16, 20, and 28 gauge, as well as .410 bore. Depending on gauge barrel lengths are from 25" to 32".

Model Piuma (BSEE)

This model is the firm's standard boxlock offering. Available in 12 gauge to .410 bore it features ejectors and a scalloped frame. Fine scroll and rosette engraving is standard.

NOTE: Around serial number 9000, or 1989, Piotti began building the Model BSEE to the same standards as the King Model. Therefore, guns below serial number 9000 deduct about 40 percent from prices listed.



NIB	Exc.	V.G.	Good	Fair	Poor
14250	10500	7500	—	—	—

Westlake Model

This was Piotti's second quality model. It features a case colored receiver with gold line work. Offered in 12, 16, and 20 gauge. Discontinued in 1989.

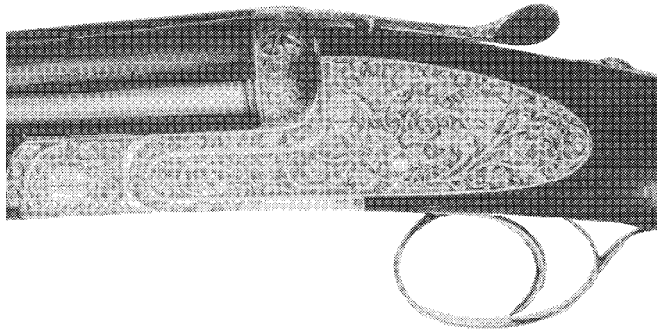
14000	10000	7000	—	—	—

Model King Extra

This model is similar to the King No. 1 but with the addition of a number of engraving styles from English to game scenes with gold inlays. Because of the wide variety of engraving patterns offered on this model it is advisable to secure a qualified appraisal before purchase.

Model Lunik

This model is fitted with Holland & Holland sidelocks. Engraving is Renaissance-style relief cut scroll engraving. A gold crown is inlaid on the top lever. Offered in gauges from 10 to .410 bore.



NIB	Exc.	V.G.	Good	Fair	Poor
28600	21000	16000	—	—	—

Model Monaco

This sidelock model features all of the best that Piotti has to offer and extra attention is paid to hand work and fitting. Only the finest European hardwoods are used. Available in 10 gauge to 410 bore. Offered with three different types of engraving designated No. 1, No. 2, and No. 4.

PLANT'S MANUFACTURING CO.

New Haven, Connecticut

Army Model Revolver

A large single-action revolver chambered for a .42 caliber cup-primed cartridge that loads from the front of the cylinder. Barrel length 6" and of octagonal form with a rib. The frame is made of either brass or iron. Finish is blued, with walnut or rosewood grips. Interchangeable percussion cylinders also were made for these revolvers. If present, the values would be increased approximately 30 percent. This revolver was marketed by Merwin & Bray, and there were approximately 1,500 of the 1st and 2nd Models manufactured and 10,000 of the 3rd Model in the 1860s.

1st Model Brass Frame

Marked "Plant's Mfg. Co. New Haven, Ct." on the barrel, "M & B" on the side of the frame, and "Patented July 12, 1859" on the cylinder. Approximately 100 manufactured.

Turret Rifle

A 9-shot vertical cylinder .44 caliber rifle with either a 26" or 28" octagonal barrel. The only markings are "Address P.W. Porter/New York." Four variations of this rifle are known and the 22" barreled carbine would command a 25 percent premium. Approximately 1,250 were manufactured during the 1850s.

1st Model with Canister Magazine

Fitted with a 30-shot round canister magazine over the turret, this model was made in Tennessee and is extremely rare. Most often the canisters are not encountered and values reflect this. Approximately 25 were made.

SEE—British Double Guns

PRAGA, ZBROVKA

Prague, Czechoslovakia

Established in 1918 by A. Novotny, this company ceased operations in 1926.

VZ2L

A 7.65mm semi-automatic pistol patterned after the Model 1910 Browning, but without a grip safety. Barrel length 3.5", magazine capacity 6 rounds, grips of wood. The slide is marked "Zbrojowka Praga Praha."

Exc.	V.G.	Good	Fair	Poor
400	250	200	150	100

Praga 1921

A 6.35mm semi-automatic pistol with a slide of stamped steel cut with a finger groove at the front. Folding trigger. The barrel 2" in length. The slide is marked "Zbrojowka Praga Praha Patent Cal 6.35." The grips of molded plastic, with the name "Praga" cast in them. A dangerous feature of this pistol is that it is striker-fired with no hammer and is intended to be carried fully loaded and cocked in the pocket with absolutely no safety of any kind. I do not recommend this. The folding trigger does not spring out until the slide is drawn back slightly by using the finger groove in the front of it.

PRESCOTT, E. A.

Worcester, Massachusetts

Percussion Pocket Revolver

A .31 caliber percussion spur trigger revolver with either 4" or 4.25" octagonal barrel and a 6-shot cylinder. The frame of brass, and the grips of walnut. It is believed that approximately 100 were manufactured during 1860 and 1861.

Exc.	V.G.	Good	Fair	Poor
—	—	2500	1125	200

Pocket Revolver

A .22 or .32 spur trigger revolver with a barrel of either 3" or 4" length. The .22 caliber version has a 7-shot cylinder and the .32 caliber version a 6-shot cylinder. The standard markings are "E.A. Prescott Worchester Mass. Pat. Oct. 2, 1860." Approximately 1,000 were manufactured between 1862 and 1867.

Exc.	V.G.	Good	Fair	Poor
—	—	825	350	100

Navy Revolver

A single-action revolver fitted with a conventional trigger, chambered for .38 rimfire cartridges with a 7.25" octagonal barrel. The unfluted cylinder holds 6 shots. The frame is of either silver-plated brass or blued iron; and the barrel and the cylinder are blued, with walnut grips. The barrel marked "E.A. Prescott, Worcester, Mass. Pat. Oct. 2, 1860." It is believed that several hundred were manufactured between 1861 and 1863. The iron frame model will bring a small premium.

R.E.

Valencia, Spain

The initials "R.E." stand for "Republica Espana." This copy of the Spanish Army Model 1921, also known as the Astra 400, was produced between 1936 and 1939 during the Spanish Civil War by the Republican forces. This variation can be identified by the "RE" monogram on the butt and the absence of any manufacturer's stampings.

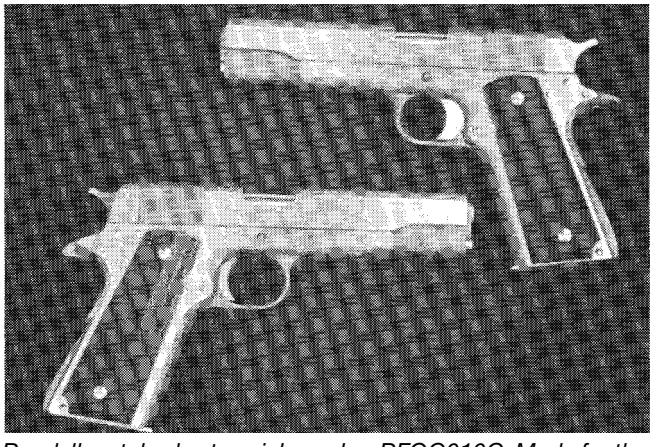
RANDALL FIREARMS CO.

Sun Valley, California



Randall matched set, serial-number RFOO010C. Made for the TV series "Magnum PI." *(Photo by Steve Comus)*

NOTE: Randall prototypes can be identified by a "T" prefix. Add 50 percent to the price for this variety. For serial numbers under 2000 add $100 to $150.

NOTE: At present (2008) the Randall market seems to be holding steady, possibly as a result of the profusion of high-end 1911s on the general market.

Randall Documentation & Collectors Club: Research letters on original Randall Letterhead are available at a cost of $30 each postpaid (Randal pistols only). Readers and collectors interested in joining the Randall Firearms/Pistol Collectors Association contact the Randall Historian, Rick Kennerknecht at:

READ & WATSON

Danville, Virginia

During 1862 and 1863, Read & Watson produced approximately 900 altered Hall rifles for the State of Virginia. These arms were made from Hall rifles issued to the state prior to the Civil War. The original breech loading mechanisms were removed and a brass breech piece or receiver was secured in their place. New buttstocks were fitted and the original Hall furniture was reused. Carbines have an overall length of 42-1/8"; barrel length of 26" and are of .52 caliber. Position and style of serial numbers varies.

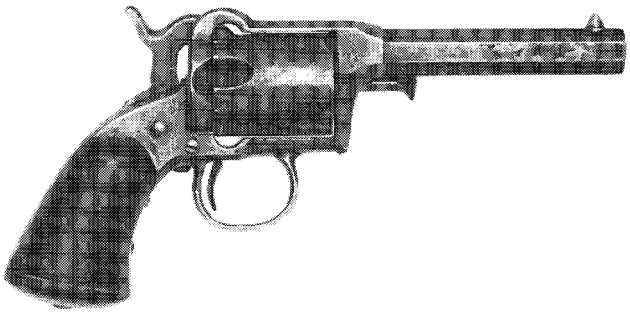
REMINGTON ARMS COMPANY, INC.

Madison, North Carolina

Founded in 1816 by Eliphalet Remington, this company has the distinction of being the oldest firearms manufacturing firm in the United States. Since 1856 it has been known by four different names: between 1856 and 1888, E. Remington & Sons; 1888-1910, Remington Arms Company; 1910-1925, Remington Arms U.M.C. Company (Union Metallic Cartridge Company); and 1925 to the present, Remington Arms Company.

1st Model Remington-Beals Revolver

A .31 caliber 5-shot percussion revolver with a 3" octagonal barrel. The cylinder turning mechanism is mounted on the left outside frame. Blued, case hardened, silver-plated, brass trigger guard and gutta-percha grips. The barrel marked, "F. Beal's Patent, June 24, '56 & May 26, '57" and the frame, "Remington's Ilion, N.Y." Approximately 5,000 were manufactured in 1857 and 1858.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1100	650	325	150

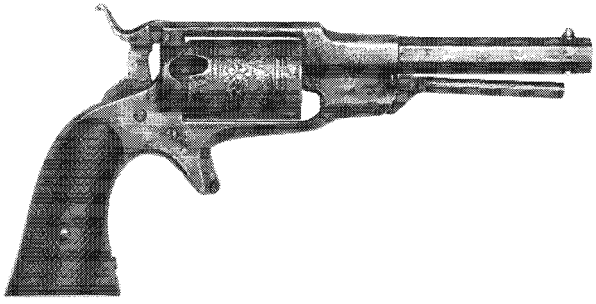
2nd Model Remington-Beals Revolver

A spur trigger .31 caliber 5-shot percussion revolver with a 3" octagonal barrel. Blued, case hardened with a squared gutta-percha grip. The barrel marked, "Beals Patent 1856 & 57, Manufactured by Remingtons Ilion, N.Y." Approximately 1,000 were manufactured between 1858 and 1860.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	8800	3300	1100	300

3rd Model Remington-Beals Revolver

A .31 caliber 5-shot percussion revolver with a 4" octagonal barrel. A loading lever mounted beneath the barrel. Blued, case hardened with gutta-percha grips. The barrel marked, "Beals Pat. 1856, 57, 58 and also "Manufactured by Remingtons, Ilion, N.Y." Approximately 1,500 were manufactured in 1859 and 1860.

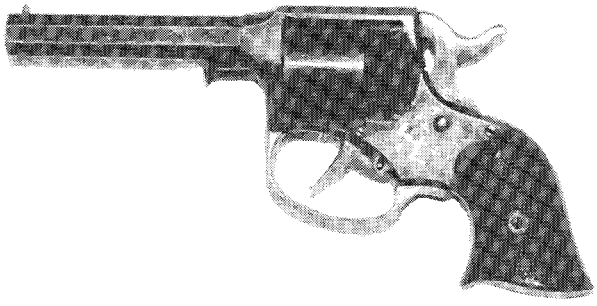


Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2250	14000	550	200

Remington-Rider Revolver

A double-action .31 caliber percussion revolver with a 3" barrel and 5-shot cylinder. Most of these revolvers were blued but a few were nickel-plated, case hardened with gutta-percha grips. This model is also encountered altered to .32 rimfire. The barrel marked, "Manufactured by Remingtons, Ilion, N.Y., Riders Pt. Aug. 17, 1858, May 3, 1859." Approximately 20,000 were manufactured between 1860 and 1873.

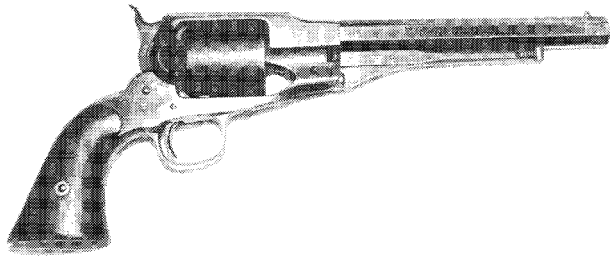


Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1225	550	225	100

NOTE: The cartridge variation is worth approximately 20 percent less than the original percussion version.

Remington-Beals Army Revolver

A .44 caliber percussion revolver with an 8" barrel and 6-shot cylinder. Blued, case hardened with walnut grips. The barrel marked "Beals Patent Sept. 14, 1858 Manufactured by Remington's Ilion, New York." Approximately 2,500 were manufactured between 1860 and 1862.

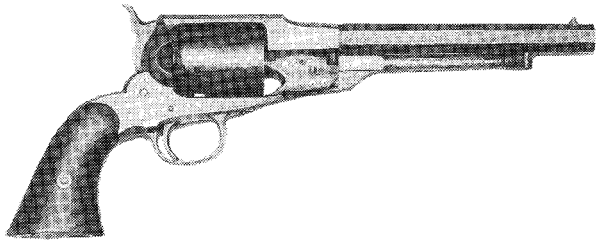


Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	4100	1650	550	200

NOTE: A martially marked example is extremely rare and would be worth approximately 35 percent additional.

Remington-Beals Navy Revolver

Similar in appearance to Remington-Beals Army Revolver, but in .36 caliber with a 7.5" octagonal barrel. The first examples of this model were fitted with a loading lever that would not allow the cylinder pin to be completely removed. These examples are worth approximately 80 percent more than the standard model. Approximately 1,000 of these revolvers were purchased by the United States government and martially marked examples are worth approximately 40 percent more than the values listed below. Manufactured from 1860 to 1862 with a total production of approximately 15,000.



Courtesy Wallis & Wallis, Lewes, Sussex, England

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2750	1100	450	200

1861 Army Revolver

A .44 caliber percussion revolver with an 8" octagonal barrel and 6-shot cylinder. The loading lever is cut with a slot so that the cylinder pin can be drawn forward without the lever being lowered. Blued, case hardened with walnut grips. The barrel marked "Patented Dec. 17, 1861 Manufactured by Remington's, Ilion, N.Y." Some examples were converted to .46 caliber rimfire cartridge, and would be worth approximately 25 percent more than the original, martially marked, standard percussion model. Approximately 12,000 were manufactured in 1862. This model is also known as the "Old Army Model."

Paul Goodwin photo

Exc.	V.G.	Good	Fair	Poor
—	2750	1100	550	200

1861 Navy Revolver

As above, but .36 caliber with a 7.25" octagonal barrel. Blued, case hardened with walnut grips. This model is also found altered to .38 metallic cartridge. Cartridge examples are worth approximately 35 percent less than the percussion versions. Approximately 8,000 were manufactured in 1862.

Paul Goodwin photo

Exc.	V.G.	Good	Fair	Poor
—	2500	875	650	400

NOTE: Add 25 percent for martial.

New Model Army Revolver

A .44 caliber 6-shot percussion revolver with an 8" octagonal barrel. Blued, case hardened with walnut grips. The barrel marked "Patented Sept. 14, 1858 E. Remington & Sons, Ilion, New York, U.S.A. New Model." Approximately 132,000 were made between 1863 and 1873.

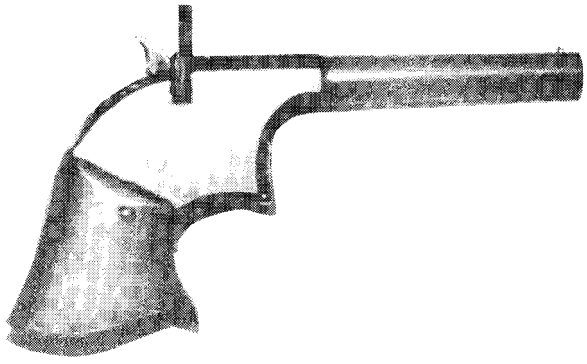
Remington-Rider Derringer

A small, silver-plated brass single-shot .17 caliber percussion pistol with a 3" round barrel. The barrel marked, "Rider's Pt. Sept. 13, 1859." Approximately 1,000 were manufactured between 1860 and 1863. Beware of fakes.



Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	6900	3300	975	300

Zig-Zag Derringer

A 6-shot .22 caliber revolving barrel pocket pistol with barrels 3.25" in length. The barrels are cut with zigzag grooves, which are part of the revolving mechanism. The trigger is formed as a ring that when moved forward and rearward turns the barrels and cocks the internal hammer. The barrel group marked "Elliot's Patent Aug. 17, 1858 May 29, 1860" as well as "Manufactured by Remington's Ilion, N.Y." Approximately 1,000 were manufactured in 1861 and 1862.

Paul Goodwin photo

REMINDER
When buying a new firearm, keep the box, manual and accessories!

Vest Pocket Pistol

A .22 caliber single-shot pistol with a 3.25" barrel. Blued or nickel-plated with walnut grips. The barrel marked "Remington's Ilion, N.Y. Patent Oct. 1, 1861." Early examples have been noted without any barrel markings. Approximately 25,000 were manufactured from 1865 to 1888.

Paul Goodwin photo

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	875	450	225	100

NOTE: Add a 35 percent premium for blued models.

Large-Bore Vest Pocket Pistol

As above, but in .30, .32, or .41 caliber with barrel lengths of either 3.5" or 4". Blued or nickel-plated with walnut or rosewood grips. The barrel markings as above except for the addition of the patent date, November 15, 1864. The smaller caliber versions are worth approximately 20 percent more than the .41 caliber. Approximately 10,000 were made from 1865 to 1888.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
1750	1500	675	350	150

NOTE: Add a 35 percent premium for blued models.

Remington-Elliot Single-Shot Derringer

A .41 caliber single-shot pistol with a 2.5" round barrel. Blued or nickel-plated with walnut, ivory, or pearl grips. The barrel marked "Remingtons, Ilion, N.Y. Elliot Pat. Aug. 27, 1867." Approximately 10,000 were manufactured between 1867 and 1888.

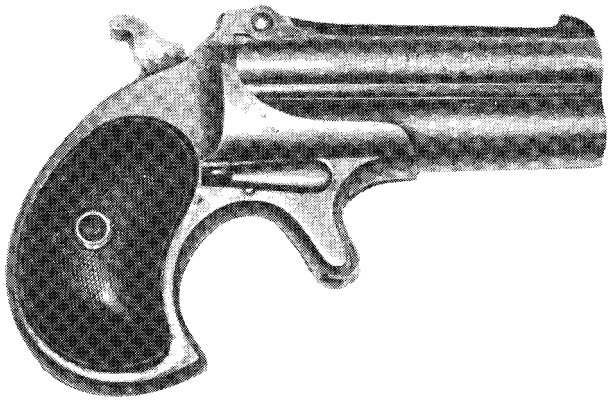
Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1850	850	400	125

NOTE: Add a 35 percent premium for blued models.

NOTE: For all variations of the Remington Over-Under Derringer below, examine closely for broken or cracked barrel hinge and subtract from value accordingly.

Remington Over-and-Under Derringer

A double-barrel .41 caliber pocket pistol with 3" round barrels that pivot upward for loading. There is a lock bar to release the barrels on the right side of the frame. The firing pin raises and lowers automatically to fire each respective barrel. It has a spur trigger and bird's-head grip. The finish is either blued or nickel-plated; and it is featured with walnut, rosewood, or checkered hard rubber grips. Examples with factory pearl or ivory grips would be worth a small premium. Approximately 150,000 were manufactured between 1866 and 1935.



Early Type I

Manufactured without an extractor, this type is marked "E." Remington & Sons, Ilion, N.Y." on one side and "Elliot's Patent Dec. 12, 1865" on the other side of the barrel rib. Only a few hundred were manufactured in 1866.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2500	875	450	200

NOTE: Add a 25 percent premium for blued models.

Type I Mid-Production

As above, but fitted with an extractor. Manufactured in the late 1860s.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2750	1100	550	250

NOTE: Add a 25 percent premium for blued models.

Type I Late Production

Fitted with an automatic extractor and marked on the top of the barrel rib. Manufactured from the late 1860s to 1888.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2200	975	450	200

NOTE: Add a 25 percent premium for blued models.

Type II

Marked "Remington Arms Co., Ilion, N.Y." on the barrel rib. Manufactured between 1888 and 1911.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1900	875	450	200

NOTE: Add a 25 percent premium for blued models.

Type III

Marked "Remington Arms - U.M.C. Co., Ilion, N.Y." on the barrel rib. Manufactured between 1912 and 1935.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1750	875	450	200

NOTE: For Type III models, blue or nickel prices are the same.

Remington-Rider Magazine Pistol

A 5-shot .32 caliber magazine pistol with a spur trigger and 3" octagonal barrel. The magazine is located beneath the barrel and can be loaded from the front. Blued, nickel-plated or case hardened with walnut, pearl, or ivory grips. The barrel marked "E. Remington & Sons, Ilion, N.Y. Riders Pat. Aug. 15, 1871." Approximately 10,000 were manufactured between 1871 and 1888.

Courtesy William F. Krause

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1950	825	350	150

NOTE: For blued finish add a 50 percent premium.

Model 1865 Navy Rolling Block Pistol

A spur trigger single-shot rolling block .50 caliber rimfire cartridge pistol with an 8.5" round barrel. Blued, case hardened with walnut grips and forend. The barrel marked "Remingtons, Ilion N.Y. U.S.A. Pat. May 3d Nov. 15th, 1864 April 17th, 1866." Examples bearing military inspection marks are worth approximately 25 percent more than the values listed below. Examples are also to be found altered to centerfire cartridge and these are worth approximately 10 percent less than the values listed below. Approximately 6,500 were manufactured between 1866 and 1870.

—	1650	875	650	200

Model 1871 Army Rolling Block Pistol

A .50 caliber rolling block single-shot pistol with an 8" round barrel. Blued, case hardened with walnut grips and forend. The distinguishing feature of this model is that it has a rearward extension at the top of the grip and a squared butt. Approximately 6,000 were made between 1872 and 1888. Engraved ivory-stocked versions, as pictured below, will bring considerable premiums.

Remington-Smoot No. 1 Revolver

A .30 caliber spur trigger revolver with a 2.75" octagonal barrel and 5-shot fluted cylinder. Blued or nickel-plated with walnut or hard rubber grips. The barrel rib is marked, "E. Remington & Sons, Ilion, N.Y. Pat. W. S. Smoot Oct. 21, 1873." Examples dating from the beginning of production are found with a revolving recoil shield. Such examples would command approximately a 300 percent premium over the values listed.

Remington 1911 and 1911A1

See the Colt section of this book for pistols of this type.

Model 51

A .32 or .380 caliber semi-automatic pistol with a 3.5" barrel and magazines capable of holding either 7 or 8 cartridges depending on the caliber. Blued with hard rubber grips having the legend "Remington UMC" in a circle at the top. The slide marked "The Remington Arms - Union Metallic Cartridge Co., Inc. Remington Ilion Wks. Ilion, N.Y. U.S.A. Pedersen's Patents Pending." Later versions carried a 1920 and a 1921 patent date. The early examples have nine grooves on the slide; later models have 15 grooves with the frame marked "Remington Trademark." Early variations are worth approximately 10 percent more than the values listed below and .32 caliber examples are worth approximately 25 percent additional. Approximately 65,000 were manufactured between 1918 and 1934.

No. 6 Rolling Block Rifle

A lightweight, small rifle designed expressly to be used by young boys. It is chambered for the .22 rimfire cartridge, as well as the .32 Short or Long. It was also produced with a smoothbore barrel to be used with shot cartridges. The round barrel is 20" in length. It has a takedown action with a barrel held on by a knurled knob underneath the frame. It is a lightweight rolling block, with a thin operating knob on the breech. The finish is blued overall. Early models featured a case-colored frame, and these versions would be worth approximately 10 percent additional. It has a straight-grip walnut stock with a small forearm. Over 250,000 manufactured between 1902 and 1903.

No. 3 Schuetzen Match Rifle

As above, with the exception that instead of the side lever, the action is raised or lowered by means of the lever on the trigger guard. Chambered for various popular cartridges and offered with a 30" or 32" part-octagonal, heavy barrel. It features a vernier tang sight with a hooded front sight. It was standard with double-set triggers and a palm rest. The finish is blued and case-colored, with a high-grade checkered walnut stock and forend. It has an ornate, Swiss-type Schuetzen buttplate and is also known as the "Walker-Hepburn Rifle." There were two versions available. One, a standard breechloader with the Remington Walker-marked barrel; and the other, a muzzleloading variation that was fitted with a removable false muzzle. This version was supplied with a brass bullet starter and other accessories. Prospective purchasers are advised to secure a qualified appraisal prior to acquisition.

Model 1879 Sporting Rifle

Barrel length 28" or 30", .45-70 or .45-90 caliber, checkered pistol-grip stock with a sporting-style forend. Markings on the receiver as above. Approximately 450 made.

Exc.	V.G.	Good	Fair	Poor
—	—	1750	700	250

Model 1879 Military Rifle

Identical to the Navy model, except chambered for the .43 Spanish cartridge. A limited number were also produced in .45-70 caliber. The Spanish versions are worth approximately 25 percent less than the values listed below. Approximately 1,000 were made. The majority of these rifles were made for export.

Model 1882 & 1885 Military Rifles

Barrel length 32", full-length stock secured by two barrel bands, chambered for .42 Russian, .43 Spanish, .45 Gardner or .45-70 cartridges. The values for those rifles not in .45-70 caliber would be approximately 25 percent less than those listed. Approximately 10,000 Model 1882 rifles were made and 60,000 Model 1885 rifles. The two models can be differentiated by the fact that the cocking piece on the bolt of the Model 1885 is larger. The majority of these rifles were made for foreign contracts and commercial sales.

Remington-Whitmore Model 1874

A sidelock double-barrel shotgun, combination shotgun/rifle or double-barrel rifle with 28" or 30" fluid steel barrels. Also available with Damascus barrels. The barrels released by pushing forward the top lever. Blued, case hardened with a straight or semi-pistol grip walnut stock. The barrels marked "A. E. Whitmore's Patent Aug. 8, 1871, April 16, 1872." The rib between the barrels is marked "E. Remington & Sons, Ilion, N.Y." Several thousand were manufactured between 1874 and 1882.

REMINGTON CUSTOM SHOP

The Remington Custom Shop builds a number of speciality rifles and shotguns as well as specific custom guns for its customers. Remington will build a wide number of special features from special wood type, finish, and styling options to engraving. These special order features add considerably to the cost of a gun and will affect its price. The Custom Shop can be reached at 1-800-243-9700 for current prices and availability.

REMINGTON 180TH ANNIVERSARY LIMITED EDITION RIFLES AND SHOTGUNS

Remington manufactured 180 each of these firearms to commemorate the founding of the company in 1816:

Model 700, Model 7600, Model 7400, Model 870, and the Model 11-87.

These firearms will feature fine line hand engraving with gold embellishments. The rifles will be chambered for the .30-06 cartridge with 22" barrels and the shotguns will be chambered for the 12 gauge shell with 26" vent rib barrels with Rem chokes. All guns will feature blue finishes with high gloss semi-fancy walnut stocks. If sold in a five-gun set each will have matching serial numbers. The suggested retail price for the five-gun set is $6,925. Individual guns will carry these suggested retail prices:

Model 700 180th Anniversary Commemorative—$1,372
Model 7400 180th Anniversary Commemorative—$1,372
Model 7600 180th Anniversary Commemorative—$1,332
Model 870 180th Anniversary Commemorative—$1,305
Model 11-87 180th Anniversary Commemorative—$1,465

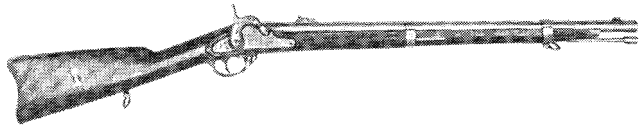
RICHMOND ARMORY

Richmond, Virginia

Carbine

This weapon was manufactured for use by the Confederate States of America and is extremely collectible. This muzzle-loading carbine is chambered for .58 caliber percussion and has a 25" round barrel and a full-length stock that is held on by two barrel bands. It was manufactured from parts that were captured at the Harper's Ferry Armory in 1861. The locks are marked "Richmond, VA" and dated from 1861 to 1865. There are sling swivels in front of the trigger guard and on the front barrel band; a third swivel is on the underside of the buttstock. The quantity manufactured is not known. They were made between 1861 and 1865.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

RIPOMANTI, GUY

St. Etienne, France

Side-by-Side Shotgun

A high-grade shotgun offered on a strictly made-to-order basis. There is a boxlock model that begins at $8,500 and a sidelock that is priced from $22,500. These prices rise depending on the options and embellishments desired. These guns are rarely seen on the used-gun market.

Side-by-Side Double Rifles

Extremely high-grade and basically made to order. They are rarely encountered on today's market. They have been imported since 1988. They range in price from $11,000 up.

Over-and-Under Double Rifle

A boxlock action over-and-under chambered for the 9.3x74R cartridge. The barrels are 23.5" in length and have express sights. There are double triggers and automatic ejectors. This model is highly engraved and features a high-grade, hand-checkered walnut stock.

RIZZINI, FRATELLI

Brescia, Italy

Early guns were manufactured with Antonio Zoli. As a result, these were off-the-shelf guns of lower prices. These early guns were imported by Abercombie and Fitch of New York. Some of these guns will be stamped with the A&F address on the barrel. These side-by-side guns have a boxlock action.

NOTE: At the present time this Italian gun company builds about 24 shotguns a year. Each gun is highly individualized for the customer. The company produces only two models. These are listed to give the reader some idea of the value of one of these models. None of these models includes the cost of engraving and multi barrel set and multi gauge sets are extra.

Rizzini models with serial numbers above #1709 have their own patented action and the prices listed reflect that action. Guns listed have a H&H style action and should deduct ap-

proximately 30 percent from the prices listed. Sellers and purchasers should note the the R-1 and R-2 models are some of the finest shotguns produced in the world.

ROBINSON, ORVIL

SEE—Adirondack Arms Company

ROBINSON, S.C.

Richmond, Virginia

From December of 1862 through March 1 of 1863, S.C. Robinson produced copies of the Sharps carbine. These arms had an overall length of 38-1/2", with .52 caliber barrels 21-1/2" long. The lockplates were marked "S.C. ROBINSON/ARMS MANUFACTORY/RICHMOND VA/1862" along with the serial number. The barrels were marked forward of the rear sight "S.C. ROBINSON/ARMS MANUFACTORY," as well as "RICHMOND VA/1862" to the rear of the sight. Total number made estimated to be slightly more than 1,900.

In March of 1863, the Robinson factory was taken over by the Confederate States Government. Carbines produced after that date are only stamped with the serial number on their lockplates and "RICHMOND VA" on their barrels. Total number made in excess of 3,400.

ROHM GMBH

Sonthein/Brenz, Germany

This firm produced a variety of revolvers marked with various trade names that were imported into the United States prior to 1968. Essentially, they are of three types: 1) solid-frame, gate-loading models; 2) solid-frame, swingout-cylinder revolvers; and 3) solid-frame, swingout-cylinder revolvers. They are of low quality and little collector interest. Caveat emptor!

Courtesy John J. Stimson, Jr.

ROHRBAUGH
Bayport, New York

R9/R9S

Introduced in 2004 this is a very small 9mm pistol. Offered with or without sights. Magazine capacity is 6 rounds. Barrel length is 2.9". Height is 3.7", length is 5.2", slide width is .812", and weight is about 12.8 oz.

RUGER

SEE—Sturm, Ruger Co.

RUPERTUS, JACOB

Philadelphia, Pennsylvania

Navy Revolver

This model is equally as rare as the Army model. It is chambered for .36 caliber percussion. Otherwise it is quite similar in appearance to the Army model. There were approximately 12 manufactured in 1859. Both of these revolvers were manufactured for test purposes and were not well-received by the military, so further production was not accomplished.

Exc.	V.G.	Good	Fair	Poor
—	—	11750	5500	1250

Pocket Model Revolver

This is a smaller version of the Army and Navy model, chambered for .25 caliber percussion. It has no loading lever and has a 3-1/8" octagonal barrel. There were approximately 12 manufactured in 1859.

Exc.	V.G.	Good	Fair	Poor
—	—	8250	3600	950

Double-Barrel Pocket Pistol

A .22 caliber double-barrel pistol with 3" round barrels and a spur trigger. The hammer fitted with a sliding firing pin. Blued with walnut grips.

Exc.	V.G.	Good	Fair	Poor
—	—	1900	850	200

Army Revolver

This is an extremely rare revolver chambered for .44 caliber percussion. It has a 7.25" octagon barrel with an integral loading lever that pivots to the side instead of downward. The hammer is mounted on the side, and there is a pellet priming device located on the backstrap. There is only one nipple on the breech that lines up with the top of the cylinder. The cylinder is unfluted and holds 6-shots. The finish is blued, with walnut grips; and the frame is marked "Patented April 19, 1859." There were less than 12 manufactured in 1859. It would behoove one to secure a qualified independent appraisal if a transaction were contemplated.

MODEL 75 SERIES

This model was introduced in March 1997. It is based on a new design by Sako. Each of the five different action sizes is manufactured for a specific range of calibers. Its action, barrel, and stocks are all redesigned components. It is offered in a variety of configurations and calibers. Sako actions are offered separately in carbon steel, in white, and stainless steel.

Sako 75 action

Model 75 Hunter

This model is available in five different action sizes for calibers from .17 Rem. to .416 Rem. Mag. Weight varies from 6.37 lbs. to 9 lbs. and barrel lengths from 22" to 24.37". Choice of checkered walnut stock or black synthetic stock. All Hunter models are sold without sights as standard but open sights are an option. Magazine is detachable except for .300 Rem. Ultra Mag and the .416 Rem. Mag. Single set trigger is an option. In 2003 a left-hand model was offered in .270 Win and .30-06. In 2004 the .270 WSM and .300 WSM calibers were added.

Sako Model 75 left-hand rifle

NIB	Exc.	V.G.	Good	Fair	Poor
1419	1050	700	500	400	400

NOTE: Add $30 for long action calibers from .270 to .416.

Model 75 Stainless Synthetic

Same as above but available with synthetic stock and stainless steel barrel and action. Offered in calibers from .22-250 to .375 H&H.

NIB	Exc.	V.G.	Good	Fair	Poor
1499	1100	750	600	400	400

NOTE: Add $30 for long action calibers.

Model 75 Deluxe

This model features all of the elements of the Hunter model with the addition of special checkering on select walnut stock with special black finish. All models have a hinged floor plate. In 2004 the .270 WSM and .300 WSM calibers were added. Weight is about 7.75 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
2044	1500	1050	800	500	400

NOTE: Add $100 for long action calibers.

Model 75 Big Game Deluxe

This model is similar to the M75 Deluxe except that it is chambered for the .416 Rem. Magnum cartridge and fitted with iron sights.

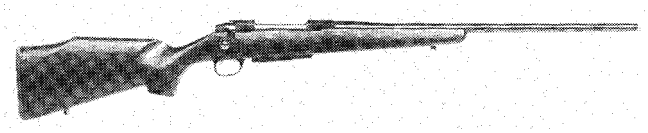
TRG-S

This model features a unique cold-forged receiver. The stock is a special reinforced polyurethane Monte Carlo without checkering. The recoil pad has spacer for adjustable length of pull. The trigger is adjustable and the detachable magazine holds 5 rounds. Offered in a variety of calibers from .243 to .375 H&H. Non-Magnum calibers are fitted with a 22" barrel and weigh 7.75 lbs. and magnum calibers are fitted with a 24" barrel and also weigh 7.75 lbs. In 1996 the .270 Wthby Mag., 7mm Wthby Mag., the .340 Wthby Mag., as well as the 6.5x55S, were added.



NIB	Exc.	V.G.	Good	Fair	Poor
800	650	500	450	400	400

TRG-21

The receiver is similar to the TRG-S but the polyurethane stock features a unique design. Chambered for the .308 cartridge. The trigger is adjustable for length and two-stage pull and also for horizontal or vertical pitch. This model also has several options that would affect the price; muzzlebrake, one-piece scope mount, bipod, quick detachable sling swivels, and military nylon sling. The rifle is offered in .308 Win. only. It is fitted with a 25.75" barrel and weighs 10.5 lbs.

SAUER, J. P. & SON

Suhl and Eckernfoerde, Germany

This is the oldest firearms manufacturing firm in Germany. It was founded in 1751 in Suhl. During this period the company produced high quality handguns and long guns. In 1938 it introduced a new double-action semi-automatic pistol, the Sauer 38H. This pistol had the first decocking lever ever used on a mass produced pistol. In 1951 the company relocated to Eckernfoerde where it continued to produced high quality forearms.

NOTE: The Model 90 Supreme and Model 202 are currently imported by SIGARMS Inc.

Bolt-Action Rifle

A Mauser action sporting rifle chambered for a variety of cartridges with either a 22" or 24" barrel featuring a raised rib. Double set triggers, express sights, blued with a checkered walnut stock. Manufactured prior to WWII.

Exc.	V.G.	Good	Fair	Poor
700	600	500	400	300

Model 200

A bolt-action rifle chambered for a variety of cartridges with short or medium length actions, 24" barrels, set trigger, 4-round magazine. Blued, checkered walnut stock. Discontinued 1987. Extra barrels add $235.

NIB	Exc.	V.G.	Good	Fair	Poor

PISTOLS

Written and compiled by our very good friend Jim Cate.

Bär Pistol

Invented by Burkard Behr and made by Sauer. This was Sauer's first modern small pistol. It has stacked barrels (over/under configuration) that allow the shooter to fire two shots, rotate the barrel, and then fire two more shots before loading. It was first patented in Germany in 1897 and in the USA in 1899. It shoots the 7mm Bär cartridge only. (DO NOT ATTEMPT TO FIRE THE .25 ACP/6.35mm CARTRIDGE IN THIS PISTOL.) It was made from 1897 to 1911 or 1912. Some pistols have Bakelite grips; some have diamond-pattern checkered wood grips. A case extractor rod screws into the bottom of the frame. No trigger guard. Add $150 for original box and instructions.

Exc.	V.G.	Good	Fair	Poor
1250	800	450	275	–

Roth-Sauer Model

The very first automatic pistol produced by J.P. Sauer & Son and designed by Karl Krinka for George Roth. It is available only in 7.65 Roth-Sauer caliber. It is a locked breech design, beautifully finished and extremely well made. Later this design was modified and became the Roth-Steyr military pistol which was adopted by Austria in 1907. A difficult-to-find pistol.

Exc.	V.G.	Good	Fair	Poor
2500	1800	900	500	300

Sauer Model 1913

First Series, which incorporates an extra safety button on the left side of the frame near the trigger and the rear sight is simply a milled recess in the cocking knob itself. The serial number range runs from 1 to approximately 4750 and this first series is found only in 7.65mm caliber. All were for commercial sales as far as can be determined. Some were tested by various militaries, no doubt.

A. European variation—all slide legends are in the German language

B. English Export variation—slide legends are marked, J.P. Sauer & Son, Suhl - Prussia, "Sauer's Patent" Pat'd May 20 1912

Both were sold in thick paper cartons or boxes with the color being a reddish purple with gold colored letters, etc. Examples of the very early European variation are found with the English language brochure or manual as well as an extra magazine, cleaning brush and grease container. These were shipped to England or the U.S. prior to Sauer producing the English Export variation.

A. European variation:

Exc.	V.G.	Good	Fair	Poor
1500	900	650	400	250

B. English Export variation:

Exc.	V.G.	Good	Fair	Poor
1800	1200	800	500	300

Original box with accessories and manual: Add $500 if complete and in very good to excellent condition.

SECOND SERIES

Extra safety button eliminated, rear sight acts as cocking knob retainer.

Commercial variation

Normal European/German slide markings are normally found; however it has been called to my attention that there are English Export pistols in this SECOND SERIES which have the English markings on the slide which are similar to those found on the FIRST SERIES of the Model 1913. This is applicable to both the 7.65mm and 6.35mm model pistols. These are exceptional scarce pistols and should command at least a 50 percent premium, perhaps more due to their rarity. This commercial

variation had factory manuals printed in English, Spanish and German which came with the cardboard boxed pistols. With the original Sauer box accessories and manual: Add $300 if in very good to excellent condition.

Police variations

These will be of the standard German Commercial configuration but nearly always having the Zusatzsicherung (additional safety) added to the pistol. This safety is found between the regular safety lever and the top of the left grip. Police used both calibers, 7.65mm and 6.35mm but the 7.65 was predominant. After the early part of the 1930s the 6.35 was not available to police departments. Thus the 6.35mm police marked Sauer is rather scarce in relation to the 7.65mm caliber. A few in 7.65mm are dated 1920 on the left side of the frame and were used by auxiliary policemen in Bavaria. Normal police property markings are on the front or rear gripstraps. Most were originally issued with at least two magazines and a police accepted holster. The mags were usually numbered and the holsters are found with and without pistol numbers.

500	350	275	175	125

NOTE: Add 10 percent for one correctly numbered magazine, or 20 percent if found with both correctly numbered magazines. Add 30 percent if found with correct holster and magazines.

R.F.V. (Reich Finanz Verwaltung)

This Sauer variation is rarely found in any condition. The R.F.V. markings and property number could be 1 to 4 digits. This variation is found in both calibers and were used by the Reich's Customs and Finance department personnel.

Imperial Military variations

These were normal German commercial variations of the time period having either the Imperial Eagle acceptance marking applied on the front of the trigger guard and having the small Imperial Army inspector's acceptance marking (crown over a scriptic letter) on the right side of the frame close to the Nitro proof; or having just the Imperial Army inspector's marking alone. Usually these pistols are found in the 40000 to 85000 range. However, the quantity actually Imperial Military accepted is quite low even though thousands were privately purchased by the officer corps. There are examples in 6.35mm which are Imperial Military accepted but these are very scarce.

Exc.	V.G.	Good	Fair	Poor
700	500	350	275	150

Paramilitary marked Sauer pistols of the 1925-35 period

A very few of the Model 1913 pistols will have been marked by paramilitary groups or organizations of this period. Usually this marking is no more than a series of numbers above another series of numbers, such as 23 over 12. These are found usually on the left side of the frame next to the left grip. Most of these numbers are indicative of property numbers assigned to a particular pistols belonging to a particular SA Group, Stahlhelm, or a rightwing organization such as the Red Front (early communist). Any pistol of this type should be examined by an expert to determine if it is an original example.

Exc.	V.G.	Good	Fair	Poor

Norwegian police usage, post World War II

After the war was over many surplus German weapons were put back into use by the government of Norway. The Germans had occupied this country and large numbers of weapons remained when the fighting ended. This included a large number of surplus Sauer pistols being utilized by the police (POLITI) forces. Most of the Sauers that were used by the Politi which have been imported into the U.S. have been the Model 1913; however there were a number of the Model 1930 pistols which reached our country as well. All examples, regardless of the model, have the word POLITI stamped on the slide as well as a rampant lion on a shield under a crown marking. Following this is the property number and this number is also stamped into the left side of the frame. Most saw much usage during the post-war period. All are in 7.65mm caliber.

Exc.	V.G.	Good	Fair	Poor
350	300	200	150	100

Model 1913/19 in 6.35mm

This particular pistol must be divided into three (3) subvariations. This variation appears to be in a serial number range of its own. The first subvariation appears to run from 1 to 40000. It is highly doubtful if this quantity was manufactured. The second subvariation incorporates a Zusatzsicherung or Additional Safety which can be seen between the normal safety lever and the top of the

left grip. It locked the trigger bar when in use. This second range appears to run from approximately serial number 40000 to 51000 which probably was continuous in the number produced. Lastly, the third subvariation examples were manufactured during or after 1926. The trigger guard has a different shape; the slide has a greater area of vertical milled finger grooves; the added Additional safety (Zusatzsicherung) now acts as the hold open device as well. These are found up to approximately 57000. Then a few examples of the first subvariation are found from 57000 up to about 62500. This was, no doubt, usage of remaining parts.

NOTE: Any commercial pistol could be special ordered with a factory nickel finish, special grip material (pearl, wood, etc.) as well as different types of engraving. It would be in your best interest to have these pistols examined by an expert.

1926 EXPORT MODEL

This variation's name comes from actual Sauer factory records found in the Suhl Archive. It is an interim pistol produced during the 1926 to early 1929 period. It is found only in the 7.65mm caliber. This was an advancement of the normal 1913 design which included changes in (1) the safety lever's design that became a slide hold open device as well, (2) shape of the frame was altered in that the trigger guard became more streamlined and the rear of the frame was shortened, and serrations were added to the slide as well as the cocking knob. These are found in the 162000 to 169000 range in relatively small clusters. Two to four thousand are presumed to have been manufactured. A scarce Sauer pistol! To date, none have been seen in nickel.

825	700	500	300	150

W.T.M.-Westentaschen Model—Vest Pocket Model

Several variations of vest pocket pistols were manufactured. The first was called a Model 1920 by the Sauer firm. We usually refer to it as the Model 1924. This pistol, as well as all other W.T.M. examples, were designed to carry in your pocket. They are quite small in size and are found only in the 6.35mm or .25 ACP caliber. Later on in 1928 an updated version became available and was referred to a the Model 1928. These differed in internal parts design, slide configuration and the bottom of the grip was marked, "Cal.6.35.28." The last version appeared in 1933 and still utilized the same grips but the trigger and some other small parts differed. All three were available in blue or nickel finish, as well as engraving and fancy grip material. A very few of the Model 1933 had stainless steel (NIROSTA marked) barrels.

Model 1920

850	700	385	250	150

NOTE: Accessories: cleaning rod, brush, aluminum oil bottle and manuals, add accordingly.

1930 Commercial Model
These pistols were for sale in Germany and other countries through normal commercial outlets. A very few are factory nickeled, engraved or both; some are with the NIROSTA marked barrels and a very few were made in Duralumin or Dural. The standard caliber was 7.65mm hut a very limited number were made in .22 LR (.22 Long). Standard grip material is black Bakelite. Most of the regular pistols were purchased by military officers, some went to paramilitary groups, such as the SA.

Standard Commercial

MODEL 36/37

These very few pistols are all prototype Sauer pistols which preceded the Model 38. They are in the 210,000 range. Please consult an expert to determine value! EXTREMELY RARE.

MODEL 38 AND 38-H (H MODEL) VARIATIONS

Model 38
This pistol started at 260000. It is Crown N Nitro proofed, has a cocking/decocking lever, and a loaded indicator pin, and is double-action. It has a high polish blue; is in 7.65m/m (the standard production pistol); is found without the thumbsafety on the slide; with a pinned mag release. VERY RARE.

One Line Slide Legend Variation (inned magazine release button - no screw)
Crown N proofs. Approximately 250 produced. Extremely rare!

Exc.	V.G.	Good	Fair	Poor
4000	3000	2000	600	300

Two Line Slide Legend Variation (pinned magazine release button - no screw)
C/N proofs, blued, with pinned magazine release (about 850 produced) VERY RARE.

Exc.	V.G.	Good	Fair	Poor
1900	1500	1000	500	275

NOTE: Add $250 for factory nickel; $350 for factory chrome; $1000 for engraving; $500 for NIROSTA marked barrel.

Two Line Slide Legend Variation (magazine release button)
C/N proofs, blued, magazine release button retained by a screw. RARE.

Exc.	V.G.	Good	Fair	Poor
1300	950	600	400	275

NOTE: Add $250 for factory nickel; $350 for factory chrome; $1000 for engraving; $500 for NIROSTA marked barrel.

SA der NSDAP Gruppe Thuringen Marked Variation
Blued, C/N proofs, with magazine release button held by a screw. VERY RARE.

Exc.	V.G.	Good	Fair	Poor
3800	2500	1000	500	275

Model 38 pistols converted to H Models by Sauer factory
Currently there are fewer than 30 known examples in collections. The thumbsafety levers were added. Unique milling on the left side of the slide determines these pistols in the 262xxx, 263xxx and 264xxx ranges. This includes SA der NSDAP Gruppe Thüringen marked pistols.

Police Eagle C and Eagle F Acceptance Variations
These are the first Eagle N (post January 1940) police accepted pistols are found in the 270000 to 276000 ranges.

Exc.	V.G.	Good	Fair	Poor
750	500	400	325	200

NOTE: Add 50 percent for E/F.

German Military Variation
This is the first official military accepted range of 2,000 pistols. It is in a range found between 271000 to 273000. Two Eagle 37 military acceptance marks are found on the trigger guard.

Exc.	V.G.	Good	Fair	Poor
1500	1000	700	475	300

Second Military Variation
These pistols are found with the high polish finish but have only one Eagle 37 acceptance marks. The letter H is found on all small parts.

Exc.	V.G.	Good	Fair	Poor
650	475	350	275	175

Police Eagle C Acceptance
This variation includes the remainder of the high polish blued police accepted pistols.

Exc.	V.G.	Good	Fair	Poor
675	550	350	275	175

NOTE: Add $50 for matching magazine, $200 for both matching mags and correct police holster; $300 for both matching mags and correct matching numbered, police accepted and dated holster.

TYPE THREE 38-H MODEL (H MODEL)

This terminology is used because of the change of the exterior finish of the Sauer pistols. Due to the urgency of the war, the order was received to not polish the exterior surfaces of the pistols as had been done previously. There was also a change in the formulation of the grip's material. Later in this range there will be found stamped parts, zinc triggers and magazine bottoms, etc. used to increase the pistol's production. Type Three has a full slide legend.

A. H Model

Military Accepted
One Eagle 37 Waffenamt mark.

Exc.	V.G.	Good	Fair	Poor

1800	750	450	250	175

NOTE: See Type Two Police info, prices apply here also.

TYPE FIVE MODEL 38 & H MODEL PISTOLS

There are two different basic variations of the Type Five Sauer pistols. Either may or may not have a thumbsafety lever on the slide. The main criteria is whether the frame is factory numbered as per normal and follows the chronological sequence of those pistols in the preceding model. After the frames were used which were already numbered and finished upon the arrival of the U.S. Army, the last variation came about. Neither variation has any Nitro proof marks.

First Variation

Factory numbered sequential frames starting on or near serial number 506800. Slides and breech blocks may or may not match.

Exc.	V.G.	Good	Fair	Poor
500	350	275	225	100

Second Variation

Started with serial number 1; made from mostly rejected parts, generally have notched trigger guards, may or may not be blued, no Nitro proofs, slides may or may not have factory legends, etc. Approximately 300 assembled. Definitely rare Sauer pistols!

Exc.	V.G.	Good	Fair	Poor
750	500	300	200	100

NOTE: There are some pistols which have post-war Russian Crown N Nitro proofs. The Russians assembled or refurbished a very few pistols after the U.S. Army left this section after the war. Several have been found with newly made barrels in 7.65mm with a C/N proof. A hard to find Sauer!

SAVAGE ARMS CORPORATION

Utica, New York
Westfield, Massachusetts

Established in 1894 by Arthur W. Savage, this company has manufactured a wide variety of firearms, of which its Model 99 is the best known. By 1915, Savage Arms was manufacturing centerfire and rimfire rifles, pistols, and ammunition. During World War I the company produced the Lewis machine guns. In 1920 Savage purchased J. Stevens Arms Company which was associated with Harry Pope, the famous barrel maker. Later in the decade the company acquired the Page Lewis Company, Davis-Warner, Crescent Firearms, and A.H. Fox. At one time Savage was the largest firearms manufacturing company in the free world. During World War II Savage/Stevens produced military small arms and machine guns. In 1947 the Sporting Arms division moved to Chicopee Falls, Mass., where it was incorporated into Stevens Arms Company. In 1960 the entire operation was moved to Westfield, Mass.

Model 1895

A .303 Savage caliber lever-action rifle with a 26" or 30" barrel and 5-shot rotary magazine. Identifiable by the hole in the breechbolt. The barrel marked "Savage Repeating Arms Co. Utica, N.Y. U.S.A. Pat. Feb. 7, 1893, July 25, 1893. CAL. .303." Blued with a walnut stock. Approximately 8,000 were manufactured between 1895 and 1899.

NOTE: Add 100 percent for .22 Hi Power caliber, 20 percent for .250-3000.

Model 99-F Featherweight Rifle

The first Savage made with the model designation visible on the outside. Located at the rear on the right side of the barrel. A true featherweight with slender 22" barrel, lightweight stocks with butt end hollowed out. Chambered for .250-3000, .300 Savage, .308, .243, .284, and .358 calibers. Serial number range 755000 to present. Built from 1955 to 1973.

Exc.	V.G.	Good	Fair	Poor
900	600	400	250	75

NOTE: Add 100 percent for .284 and .358 calibers, add 50 percent for .243 and .250-3000 Savage.

Model 99-DL Deluxe Monte Carlo Rifle

A deluxe version of the Model 99EG. Available in .243, .250 Savage, .300 Savage, .284, .358, and .308 calibers with a Monte Carlo-style stock. Serial number range 1000000 to present. Manufactured between 1960 and 1973.

Exc.	V.G.	Good	Fair	Poor
500	350	250	150	50

NOTE: Add 75 percent for .358 and .284 calibers.

Model 99-E Economy Rifle

The ugly duckling of the Savage line. The Model 99-E lacked many of the standard features such as left side cartridge counter, tang sight holes, walnut stocks, and capped pistol grip. Fitted with 20", 22", or 24" barrels and chambered for .250-3000, .300 Savage, .243, and .308 calibers. Serial number range 1000000 to present. Built from 1960 to 1984.

Exc.	V.G.	Good	Fair	Poor
450	375	275	150	50

NOTE: The Model 99-E was the last original rotary magazine Model 99 when production discontinued in 1984.

Model 99-C Clip Magazine Rifle

The recent production model in .22-250, .243, .284 Winchester, 7mm-08, or .308 caliber with a 22" barrel and open sights. Blued with a walnut stock. This model features a clip magazine and is the first modification in the Model 99 in 66 years. Introduced in 1965. Dropped from production and reintroduced in 1995 in .243 and .308 calibers. Approximate weight is 7.75 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
550	350	300	250	150	50

NOTE: Add 100 percent for .22-250, .284, and 7mm-08.

Model 99-DE Citation Grade Rifle

A premier Savage with an engraved receiver with nickel-like finish and impressed checkering on select walnut stocks. Marked 99-M. Offered in .243, .284, and .308 calibers with 22" barrel only. Serial number range 1140000 to present. Manufactured between 1965 and 1970.

Exc.	V.G.	Good	Fair	Poor
1500	1000	600	—	—

NOTE: Add 30 percent for .284 caliber.

Model 99-PE Presentation Grade Rifle

This model is a presentation grade Model 99 with an engraved receiver as well as a hand-checkered finely figured walnut stock. Mountain lion on right side of receiver and elk on left side. Chambered for .243, .284, and .308 caliber with 22" barrel. Serial number range 1140000 to present. Manufactured between 1965 and 1970.

Exc.	V.G.	Good	Fair	Poor
2000	1500	800	—	—

NOTE: Add 30 percent for .284 caliber.

Model 1895 Anniversary Edition

A .308 caliber reproduction of the Model 1895 with a 24" octagonal barrel, engraved receiver and walnut stock with a schnabel forend. Brass crescent buttplate, brass medallion inlaid in stock. There were 9,999 manufactured in 1970.

NIB	Exc.	V.G.	Good	Fair	Poor
550	300	250	200	—	—

Model 99-A Saddle Gun

A variation of the original Model 99A with a 20" or 22" barrel. Chambered for the .243, .250 Savage, .300 Savage, .308, and .375. Serial number range in new "A" series on left side. Manufactured between 1971 and 1982.

NIB	Exc.	V.G.	Good	Fair	Poor
900	600	300	250	—	—

NOTE: Add 25 percent for .375 caliber.

Model 99-.358 and 99-.375 Brush Guns

Similar to the Model 99-A straight grip saddle gun, but in .358 and .375 Win. (1980) calibers. Has plain grooved forend, rubber recoil pad. Serial number range in the "A" series on left side. Built from 1977 to 1980.

NIB	Exc.	V.G.	Good	Fair	Poor
700	500	300	250	—	—

NOTE: Add 25 percent for .358 Win. caliber.

Model 99-CD Deluxe Clip Model

The North American classic rifle with distinct stocks of checkered walnut with long grooved forend, deep shaped pistol grip, and Monte Carlo stock with cheekpiece. Fitted with 22" barrel

and chambered for .250-3000, .308, or .243. Serial number range in new "A" series on left side. Built from 1975 to 1980.

NIB	Exc.	V.G.	Good	Fair	Poor

Chambered in .300 Savage with 22-inch barrel. 1000 numbered rifles, high-luster blued barrel and action, unique checkering pattern on select walnut stock, high-grade hinged floorplate, Scroll pattern on receiver, 24-karat gold plated double barrel bands, 24-karat gold plated AccuTrigger, embossed recoil pad.

NIB	Exc.	V.G.	Good	Fair	Poor
1700	375	—	—	—	—

NOTE: The following section deals primarily with modern Savage bolt-action centerfire rifles in which the barrel is attached to the receiver by means of a threaded collet. For some reason that the editor is unable to determine, these

excellent, accurate rifles tend not to bring high prices on the secondary market. This is bad for the seller but quite good for the buyer, who can amass an impressive collection for much less than he or she would pay for other brands of rifles of similar quality. Certainly there are enough variations of these rifles to keep a collector busy – or drive him crazy.

MODEL 111 SERIES

Model 111 Classic Hunter Series

All models under this series are fitted with a classic American-designed straight comb stock with pistol grip. Chambered in 13 different calibers from .223 Rem. to the .338 Win. Mag. REMINDER

The difference between "New in Box" and "Excellent" can be enormous to the "condition collector": as much as 50 percent of the gun's value in some cases.

PISTOLS

Elbert Searle was granted a patent on an automatic pistol which utilized the bullet's torque to twist the barrel into a locking position with the slide. The patent also featured a double-row staggered magazine which increased the capacity over ordinary pistols. The patent was sold to Savage and the first Savage automatic pistol, the Model 1907 was produced.

NOTE: Savage automatic pistols with the original cardboard box will bring between $50 and $100 premium. If the instruction pamphlet, cleaning brush, or other advertising material is present the price will escalate.

Model 1907

A .32 or .380 semi-automatic pistol with a 3.75" or 4.25" barrel depending upon caliber and a 9- or 10-shot magazine. Blued with hard rubber rectangular grips. This model is often incorrectly termed the Model 1905 or Model 1910.

Courtesy Bailey Brower, Jr., Copyright 2005, Bailey Brower, Jr.

Exc.	V.G.	Good	Fair	Poor
300	250	200	125	75

NOTE: The .380 caliber model is worth approximately 30 percent more than the values listed.

Model 1907 Portugese Contract

Similar to the commerical guns but with a lanyard ring same as the French contract model. Original Portugese pistols will have the Portugese Crest on the grips. Only about 1,150 of these pistols were produced. Very rare. Proceed with caution.

Exc.	V.G.	Good	Fair	Poor
1500	1000	750	600	300

Model 1915

Similar to the above, except fitted with a grip safety and with an internal hammer. Approximately 6,500 pistols were produced in .32 caliber and 3,900 in the .380 caliber. Manufactured between 1915 and 1917. The rarest of the Savage automatic pistols.

Courtesy Bailey Brower, Jr., Copyright 2005, Bailey Brower, Jr.

Model 6.35mm

A small number of .25 caliber Savage pistols were manufactured between 1915 and 1919. Perhaps less than 25 were built. There are two major variations of this pistol. First, is the wide or 10-serrations grip, and second the 27-serrations grip variation. This change occured around 1917. Magazine capacity was 6 to 7 rounds. Very rare.

SCHALL & CO.

New Haven, Connecticut

Manufactured the Fiala repeating pistol for Fiala. Later, after Fiala's bankruptcy, Schall provided parts, repair service, and produced repeating pistols with the Schall name. Marketed by Schall between about 1930 and 1935.

Repeating Pistol

A .22 caliber pistol with 10-shot magazine. Tapered 6.5" barrel with fixed sights and blued finish. Rear sight is much simpler than those on the Fiala. Grips are wood with ribs running lengthwise. Typically marked "SCHALL & CO./NEW HAVEN, CONN USA" but guns exist with no markings. Note that the original Fiala pistols had 7.5" barrels, but not so the Schalls (a fact revealed to us by our friend Jack in Florida).

SEARS, ROEBUCK & CO. BRAND
Chicago, Illinois

Double-Barrel Shotguns
Between 1892 and 1988 the world's largest mail order house carried a huge inventory of sporting doubleguns including any foreign and domestic brands whose makers did not object to Sears' famous price discounts. To increase sales volume, however, Sears also created its own brands which they supported with innovative design, extravagant advertising claims, unbeatable pricing and excellent quality control. These doubles, like many other firearms products handled by Sears, were listed in its very detailed semiannual catalog from about 1892, when the company first offered doubleguns, until about 1988 when social and political pressures made the company stop handling firearms.

Sears marketing people gave birth to and successfully exploited many house and private brands which we no longer associate with Sears at all. In fact, many of these brands clearly rollmarked on guns are now unfamiliar to many collectors. Frequently seen and important in the market segment which many might describe as affordable doubles are some of the most often seen Sears trade names or brands. Listed in chronological order: T. Barker, S.R. & Co., Triumph, Thomas Barker, Sam Holt, Chicago Long Range Wonder, American Bar Lock, Meriden Fire Arms Co., Norwich, A. J. Arbrey Gun Co., New England, Gladiator, Berkshire, Ranger, Eastern Arms Co., J.C. Higgins, Sears, and Ted Williams. These guns were of good

quality but sold at bargain prices which gave them tremendous appeal. They were made for Sears to Sears' specifications by a number of American firms and a few foreign ones as well, all of which produced excellent shotguns under their own names. Among the best-known American companies were J. Stevens, Savage Arms, A.H. Fox, High Standard, N.R. Davis, Crescent Firearms, Ithaca, A. Fyrberg, Colton Mfg. Co., Marlin, Hunter Gun Co., Baker Gun Co., and probably a few others. Among the foreign makers were AYA, H. Pieper, Janssen, SKB, Rossi, CBC, and A. Zoli.

Sears customers were not aware of this but they did trust Sears name and bought many millions of these shotguns over the nearly 100 years that Sears was in the business. Today these guns are becoming recognized as interesting and valuable collectibles in their own special niche. Their values range from $100 to $3,500 or more depending on make, model, decoration, if any, and relative rarity.

SHARPS RIFLE MANUFACTURING COMPANY

Hartford, Connecticut

The first Sharps rifles to be manufactured were made by A.S. Nippes of Mill Creek, Pennsylvania. Later they were made by Robbins & Lawrence of Windsor, Vermont. It was not until 1855 that Sharps established his own factory in Hartford, Connecticut. After his death in 1874, the company was reorganized as the Sharps Rifle Company and remained in Hartford until 1876 when it moved to Bridgeport, Connecticut. It effectively ceased operations in 1880.

The following descriptions are just a brief guide and are by no means exhaustive.

Model 1849

A breechloading .44 caliber percussion rifle with a 30" barrel having a wooden cleaning rod mounted beneath it. The breech is activated by the trigger guard lever, and there is an automatic disk-type capping device on the right side of the receiver. The finish is blued and case colored. The stock is walnut with a brass patch box, buttplate, and forend cap. It is marked "Sharps Patent 1848." There were approximately 200 manufactured in 1849 and 1850 by the A.S. Nippes Company.

Exc.	V.G.	Good	Fair	Poor
—	—	18000	7500	1500

Model 1850

As above, with a Maynard priming mechanism mounted on the breech. Marked "Sharps Patent 1848" on the breech and the barrel "Manufactured by A.S. Nippes Mill Creek, Pa." The priming device marked "Maynard Patent 1845." There were ap-

proximately 200 manufactured in 1850. This model is also known as the 2nd Model Sharps.

Exc.	V.G.	Good	Fair	Poor
—	—	15000	6000	1200

Model 1851 Carbine

A single-shot breechloading percussion rifle in .36, .44, or .52 caliber with a 21.75" barrel and Maynard tape priming device. Blued and case hardened with a walnut stock and forearm held on by a single barrel band. The buttplate and barrel band are brass, and the military versions feature a brass patch box. The tang marked "C. Sharps Patent 1848," the barrel "Robbins & Lawrence," and the priming device "Edward Maynard Patentee 1845." Approximately 1,800 carbines and 180 rifles were manufactured by Robbins & Lawrence in Windsor, Vermont, in 1851.

Exc.	V.G.	Good	Fair	Poor
—	—	9500	4250	1000

NOTE: Those bearing U.S. inspection marks are worth approximately 75 percent more than the values listed.

Model 1852

Similar to the above, but with Sharps' Patent Pellet Primer. The barrel marked "Sharps Rifle Manufg. Co. Hartford, Conn." Blued, case hardened, brass furniture and a walnut stock. Manufactured in carbine, rifle, sporting rifle and shotgun form. Approximately 4,600 carbines and 600 rifles were made between 1853 and 1855.

SHILOH RIFLE MFG. CO., INC.

Big Timber, Montana

Established in Farmingdale, New York, in 1976, this company moved to Big Timber, Montana, in 1983 with the name Shiloh Products. It changed its name to Shiloh Rifle Manufacturing Co. in that same year. In 1985 the company began marketing its products factory direct. In 1991 Robert, Phyllis, and Kirk Bryan purchased the company. Those interested in the Sharps reproduction rifles manufactured by this company are advised to contact them in Big Timber.

NOTE: The company will build a rifle to customers' specifications. It is therefore possible that many of these rifles have special-order features that are not reflected in the base model price. Since Shiloh is in effect a custom (or at least semi-custom) manufacturer, the rifles listed here are representative but not inclusive.

Model 1863 Military Rifle

SIGARMS/SIG-SAUER

Eckernforde, West Germany

This old-line Swiss firm was established in 1853 and is now a broadly based engineering consortium. Its first successful commercial design was the SP 47/8 introduced in 1948. SIG, a Swiss company, associated itself with the German firm of Sauer in 1970. SIG-Sauer pistols are SIG designs assembled in Germany. At the present time the P239 and P229 SIG pistols are produced in New Hampshire.

NOTE: SIGARMS currently offers an almost innumerable variety of semi-auto pistols. The main models are listed here. Values for similar models (i.e., those with similar model numbers) are generally comparable to the values given here with a 5-10 percent premium for scarce or desirable options.

PISTOLS

CLASSIC SERIES

NOTE: Maximum magazine capacity for all currently manufactured SIG pistols is 10 rounds regardless of caliber and previous capacity.

NOTE: For pistols with factory installed night sights add $90. Add $45 for pistols with K-Kote finish. Add $35 for nickel slides.

P210

This model was reintroduced into the U.S. in 2001 and is based on the Swiss military version first built in 1949. It is designed primarly as a target pistol and is furnished in four different variations. All variations are chambered for the 9mm cartridge.

NOTE: Older P210 models imported before 1968 without importer stammps and pistols built during the late 1940s and early 1950s may bring a premium to the collector. Be aware that extra barrels, conversion kits, and other special order features will add additional value.

P210-8-9

This variation has adjustable target sights, select wood grips, lateral magazine catch, blued sandblasted finish, and adjustable trigger stop. Heavy frame. Barrel length is 4.8". Weight is about 37 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
4275	3500	—	—	—	—

P210-6-9

This variation has adjustable target sights, wood grips, target grade trigger, and blued sandblasted finish. Barrel length is 4.8". Weight is about 32 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
2695	2000	—	—	—	—

P210-5-9

This variation has extended 5.85" barrel with compensator, ribbed front frame grip, wood grip plates, adjustable target sights, and target trigger. Weight is about 34 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
3000	2200	—	—	—	—

P210-2-9

This variation is similar to the Swiss Army service pistol and has wood grip plates and standard fixed sights. Barrel length is 4.8". Weight is about 32 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
1675	1350	—	—	—	—

NOTE: A .22 LR conversion is available for the P210-2/5/6 series but not the P210-8. Retail price is $700.00.

P210-9-6S

This 9mm pistol is fitted with a heavy frame, target sights, wood grips, and U.S.-style magazine release. Introduced in 2004.

NIB	Exc.	V.G.	Good	Fair	Poor
3000	2200	—	—	—	—

P220

This is a high-quality, double-action semi-automatic pistol chambered for .38 Super, .45 ACP, and 9mm Parabellum. It has a 4.41" barrel and fixed sights and features the de-cocking lever that was found originally on the Sauer Model 38H. There are two versions of this pistol—one with a bottom magazine release (commonly referred to as the European model) and the other with the release on the side (commonly referred to as the American model) as on the Model 1911 Colt. The frame is a lightweight alloy that is matte-finished and is available in either blue, nickel, or K-Kote finish with black plastic grips. The .45 ACP magazine capacity is 7 rounds and the pistol weighs 25.7 oz.; the .38 Super magazine capacity is 9 rounds and the pistol

weighs 26.5 oz.; the 9mm magazine holds 9 rounds and the overall weight is 26.5 oz. This model was manufactured from 1976 and is still in production. The 9mm version in this model is no longer in production. The prices listed are for guns with a standard blue finish.

NOTE #1: For the K-Kote finish add $40, for nickel slide add $40. Stainless steel add $100. In 2004 a blued version with tactical rail was offered.

NOTE #2: At the present the P220 pistol is offered only in .45 ACP.

P250 COMPACT

Introduced in 2008. A 9mm semiauto pistol of so-called "modular design" that enables the shooter to quickly remove the functional mechanism and place it into the polymer grip of his choice. This allows an immediate change in caliber and size; (subcompact, compact and full). And after any change the pistol delivers both outstanding accuracy and reliable functionality. Its modularity not only provides incredible ease of maintenance, but also provides a solution for accommodating different hand sizes— there are 6 different ergonomic combinations for each size, accomplished by changes in grip circumference and trigger style. Matte or duotone finish.

Sauer SSG 3000
Imported by SIGARMS. A 5-round bolt action sniper rifle chambered in .308 Winchester. The heavy-contoured, hammer forged barrel is fitted with a flash suppressor/muzzle brake to provide greater accuracy with reduced muzzle signature. Both the barrel and the receiver feature a black oxide finish to eliminate glare. The short, smooth 60 degree bolt throw allows for rapid operation and, like the safety release, the bolt action is quiet. A massive six-lug lockup system is used to give the SSG 3000 greater strength and accuracy. Pistol grip and fully adjustable stock to give the shooter a custom fit. The trigger is adjustable for trigger position, trigger take up, let-off point, and trigger pull weight. The receiver on the SSG 3000 features a dovetail that will accept a wide range of sighting systems, including a factory available M1913 rail.

SIMPLEX

Unknown

Simplex

A German design based on the Bergmann-Mars pistol. An 8mm caliber semi-automatic pistol with a 2.6" barrel and a front mounted 5-round magazine. Blued with hard rubber grips having the trade name "Simplex" cast in them. Manufactured from approximately 1901 to around 1906. Early samples may have come from Germany and later pistols are thought to have been produced in Belgium.

SMITH, L. C.

Syracuse, New York
Hunter Arms Company
Fulton, New York

One of the finest American-made double-barrel shotguns and very collectible in today's market. It was manufactured between 1880 and 1888 in Syracuse, New York; and between 1890 and 1945, in Fulton, New York, by the Hunter Arms Company. In 1945 Marlin Firearms Company acquired Hunter Arms, and the L.C. Smith was made until 1951. In 1968 the L.C. Smith was resurrected for five years, and production ceased totally in 1973. The values given are approximate for standard production models; and we strongly feel that competent, individual appraisals should be secured, especially on the rarer and higher grade models, if a transaction is contemplated.

The values given are for fluid steel, hammerless guns only. Damascus-barreled guns have become collectible if they are in very good or better condition, and values are approximately the same as for the fluid steel models. Damascus guns in less than good condition are worth considerably less.

Early Hammerless Shotguns

The models listed were manufactured between 1890 and 1913. They are chambered for 10, 12, 16, and 20 gauge and were produced with various barrel lengths and choke combinations. They feature full sidelock actions. The difference in the models and their values is based on the degree of ornamentation and the quality of materials and workmanship utilized in their construction. The general values furnished are for 10, 12 or 16 gauge guns only.

NOTE: 20 gauge add 50 percent. A premium for 25 percent for 10 gauge and 16 gauge guns should be added. Single-selective trigger add $250. Automatic ejectors add 30 percent.

Later Production Hammerless Shotguns

These were manufactured at Fulton, New York, between 1914 and 1951. They are side-by-side double-barrel shotguns chambered for 12, 16, and 20 gauge, as well as the .410. They are offered with various barrel lengths and choke combinations. They feature a full sidelock action and are available with double or single triggers, extractors, and automatic ejectors. The finishes are blued and case colored, with checkered walnut stocks that are of either straight, semi-pistolgrip, or pistolgrip configurations. The various models differ as to the degree of ornamentation and the quality of materials and workmanship utilized in their construction. These are highly collectible American shotguns. Because these guns were manufactured as late as 1951, mint original specimens and even unfired new in the box guns will be offered for sale occasionally. These guns are worth considerably more than excellent condition guns and more than ever an individual, expert authentication and appraisal is recommended if a transaction is anticipated.

NOTE: The values supplied are for 12 gauge models only. For 16 gauge add 25 percent premium. For 20 gauge add 50 percent premium. For .410 bore add 200 percent premium (field grade), 300 percent to 400 percent for higher grades. Single-selective triggers add $250 premium. For automatic ejectors add 30 percent premium.

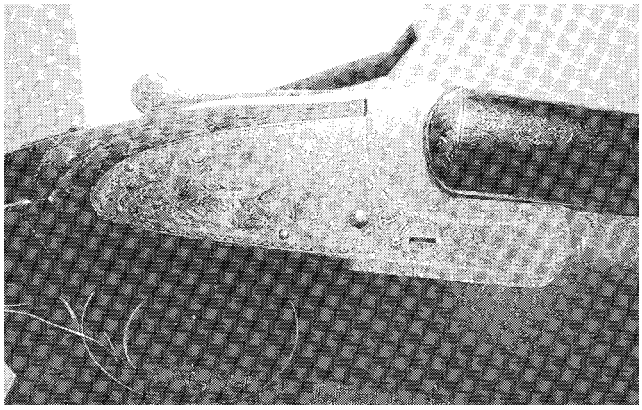
Monogram Grade

This version is offered standard with automatic ejectors and a single-selective trigger.



Exc.	V.G.	Good	Fair	Poor
14000	11000	8250	5500	3750

There were two higher grades offered: the Premier Grade and the Deluxe Grade. They are extremely rare, and there have not been enough transactions to generally evaluate them.

HUNTER ARMS BOXLOCKS

These shotguns have been maligned over the years being refered to as "cheap boxlocks not to be confused with the L.C. Smith." These guns, in fact, are inexpensive, high quality boxlocks built with quality equal to the Field Grade L.C. Smith. The receiver, forend iron, trigger guard and triggers are all machined from forgings. Durablity of these guns has proven to be excellent.

Fulton Model

A utility side-by-side boxlock shotgun chambered for 12, 16, 20 gauge and .410 bore. It was offered with various barrel length and choke combinations. It has double triggers and extractors with a non-selective single trigger option. Values given are for 12 gauge only.

Exc.	V.G.	Good	Fair	Poor
750	525	300	225	150

NOTE: For 20 gauge add 50 percent premium. For .410 bore add 250 percent premium. For 16 gauge add 25 percent. For single trigger add $150.

Fulton Special

A slightly higher grade version of the Fulton Model featuring modest engraving and pointed checkering.

1000	650	450	300	200

NOTE: For 20 gauge add 50 percent premium. For 16 gauge add 25 percent. For single trigger add $200.

Hunter Special

Similar to the Fulton Model but features the L.C. Smith rotary locking bolt.

Courtesy William Hammond

Exc.	V.G.	Good	Fair	Poor
700	550	450	300	200

NOTE: For 20 gauge add 75 percent premium. For .410 bore add 300 percent premium. for 16 gauge add 25 percent.

Single Barrel Trap Guns

High quality, break-open, single-shot trap guns chambered for 12 gauge only. They feature 32" or 34" vent rib barrels that are full-choked. They have boxlock actions and are standard with automatic ejectors. The finish is blued and case colored, and they have a checkered walnut stock with a recoil pad. The various models differ in the amount of ornamentation and the quality of the materials and workmanship utilized in their construction. There was a total of approximately 2,650 manufactured between 1917 and 1951. Although these firearms are actually rarer and just as high in quality as their side-by-side counterparts, they are simply not as collectible as the side-by-side variations.

1968 Model

A side-by-side double-barrel shotgun chambered for 12 gauge with a 28" vent rib barrel, choked Full and Modified. It features a sidelock action with double triggers and extractors. The finish is blued and case colored, with a checkered walnut stock. This shotgun was offered by Marlin between 1968 and 1973.

These are less desirable than earlier models because of manufacturing expedients used. Investment cast receiver rather than machined forgings were used. Cyanide case-hardening replaced bone charcoal hardening and aluminum vent ribs were used. A thin brown polymer layer was used to create the fit between the lock plates and buttstock which is a departure from traditional fitting.

Exc.	V.G.	Good	Fair	Poor
775	650	550	450	300

1968 Deluxe Model

Similar to the 1968 model but features a Simmons floating rib and a beavertail-type forearm. It was manufactured by Marlin between 1971 and 1973.

SMITH, OTIS

Rockfall, Connecticut

This company manufactured a line of single-action, spur-trigger revolvers that are chambered for .22, .32, .38, and .41 rimfire cartridges. The pistols have varying barrel lengths. The cylinder access pin is retained by a button on the left side of the frame. The cylinder usually holds five shots. The finishes are either blued or nickel-plated, with bird's-head grips. The quality was considered to be mediocre.

Model 1883 Shell-Ejector

A single-action, break-open, self ejecting revolver with a ribbed 3.5" barrel chambered for .32 centerfire. It has a 5-shot fluted cylinder and a spur trigger. It was quite well made. The finish is nickel-plated, with black plastic grips.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	450	225	100	75

Model 1892

A double-action, concealed-hammer revolver chambered for the .38 centerfire cartridge. It has a 4" barrel and, for the first time, a conventional trigger and trigger guard. It is gateloaded and has a solid frame. It is nickel-plated with black plastic grips and also appeared under the Maltby, Henley & Company banner marked "Spencer Safety Hammerless" or "Parker Safety Hammerless." The Otis Smith Company ceased operations in 1898.

SMITH & WESSON

Springfield, Massachusetts

SMITH & WESSON ANTIQUE HANDGUNS

NOTE: A surprising number of pistols are still found in their original boxes, even for older models. This can add 100 percent to the value of the pistol.

Model 1, 1st Issue Revolver

This was the first metallic-cartridge arm produced by Smith & Wesson. It is a small revolver that weighs approximately 10 oz. and is chambered for the .22 Short rimfire cartridge. The octagonal barrel is 3.25" long. It holds 7 cartridges. The barrel and nonfluted cylinder pivot upward upon release of the under the frame. This model has a square butt with rosewood grips. The oval brass frame is silver-plated. The barrel and cylinder are blued. The barrel is stamped with the company name and address; the patent dates also appear. The sides of the frame are rounded on the 1st issue. Other characteristics which distinguish the more valuable 1st issue from later issues include a perfectly round side plate and a hinged hammer spur. Smith & Wesson manufactured approximately 11,000 of these revolvers between 1857 and 1860. Since this was the first of its kind, it is not difficult to understand the need for the number of variations within this model designation. Many small improvements were made on the way to the next model. These variations are as follows:

1st Type

Serial range 1 to low 200s, revolving recoil shield, bayonet type catch on frame.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	15000	10000	8000	—

NOTE: Rarity makes valuation speculative.

2nd Type

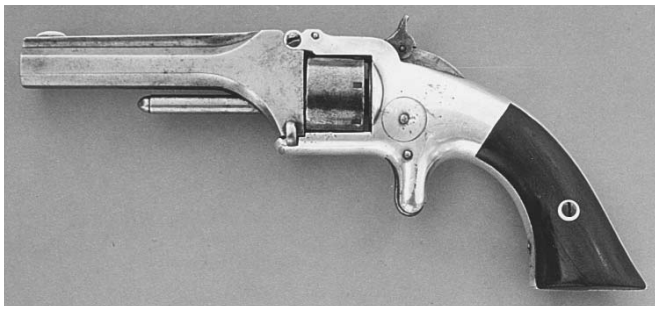
Serial range low 200s to 1130, improved recoil plate.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	10000	6000	2500	—

3rd Type

Serial range 1130 to low 3000s, bayonet catch dropped for spring-loaded side catch.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	5500	4000	2500	—



Typical configuration for 3rd-6th type, Model 1 1st Issue

Courtesy Jim Supica, Old Town Station

4th Type

Serial range low 3000s to low 4200s, recoil shield made much smaller.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2250	1800	1250	—

5th Type

Serial range low 4200s to low 5500s, has 5-groove rifling instead of 3.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	2250	1800	1250	—

6th Type

Serial range low 5500s to end of production 11670. A cylinder ratchet replaced the revolving recoil shield.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1600	1400	1000	—

Model 1 2nd Issue

Similar in appearance to the 1st Issue this 2nd Issue variation has several notable differences that make identification rather simple. The sides of the frame on the 2nd Issue are flat not rounded as on the 1st Issue. The sideplate is irregular in shape—not round like on the 1st Issue. The barrel was 3-3/16" in length. The barrel is stamped "Smith & Wesson" while the cylinder is marked with the three patent dates: April 3, 1858, July 5 1859, and December 18, 1860. There have been 2nd Issue noted with full silver or nickel-plating. Smith & Wesson manufactured approximately 115,000 of these revolvers between 1860 and 1868. The serial numbers started around 1100 where the 1st Issue left off and continued to 126400. There were approximately 4,400 revolvers marked "2D Quality" on the barrels. These revolvers were slightly defective and were sold at a lesser price. They will bring an approximate 100 percent premium on today's market.

Model 1 3rd Issue

This is a redesigned version of its forerunners. Another .22 Short rimfire, 7-shot revolver, this model has a fluted cylinder and round barrel with a raised rib. This variation was manufactured

totally from wrought iron. The three patent dates are stamped on top of the ribbed barrel as is "Smith & Wesson." It features bird's-head type grips of rosewood and is either fully blued nickel-plated, or two-toned with the frame nickel and the barrel and cylinder blued. There are two barrel lengths offered: 3.25" and 2-11/16". The shorter barrel was introduced in 1872. Serial numbering began with #1 and continued to 131163. They were manufactured between 1868 and 1882. The Model 1 3rd Issue was the last of the tip-up style produced by Smith & Wesson.

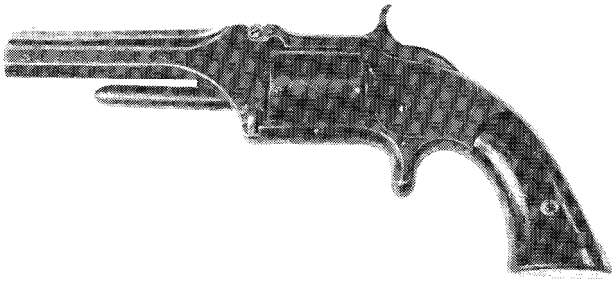
Model 1-1/2 1st Issue (1-1/2 Old Model)

This model was the first of the .32-caliber Rimfire Short revolvers that S&W produced. It is a larger version of the Model 1 but is physically similar in appearance. The Model 1-1/2 was offered with a 3.5" octagonal barrel and has a 5-shot nonfluted cylinder and a square butt with rosewood grips. In 1866 a 4" barrel version was produced for a short time. It is estimated that about 200 were sold. The finish is blued or nickel-plated. The serial numbering on this model ran from serial number 1 to 26300; and, interestingly to note, S&W had most of the parts for this revolver manufactured on contract by King & Smith of Middletown, Connecticut. Smith & Wesson merely assembled and finished them. They were produced between 1865 and 1868.



Courtesy Mike Stuckslager

—	650	400	200	—

NOTE: Add a 50 percent premium for the 4" barrel variation.

Model 1-1/2 2nd Issue (1-1/2 New Model)

The factory referred to this model as the New Model 1-1/2 and it is an improved version of the 1st Issue. It is somewhat similar in appearance with a few notable exceptions. The barrel is 2.5" or 3.5" in length, round with a raised rib. The grip is of the bird's-head configuration, and the 5-shot cylinder is fluted and chambered for the .32 Long rimfire cartridge. The cylinder stop is located in the top frame instead of the bottom. The finish and grip material are the same as the 1st Issue. There were approximately 100,700 manufactured between 1868 and 1875.

Model 1-1/2 Transitional Model

Approximately 650 of these were produced by fitting 1st Issue cylinders and barrels to 2nd Issue frames. They also have 1st Model octagon barrels with 2nd Model bird's-head grips. These revolvers fall into the serial number range 27200-28800.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	3000	1500	800	—

Model 2 Army or Old Model

Similar in appearance to the Model 1 2nd Issue, this revolver was extremely successful from a commercial standpoint. It was released just in time for the commencement of hostilities in the Civil War. Smith & Wesson had, in this revolver, the only weapon able to fire self-contained cartridges and be easily carried as a backup by soldiers going off to war. This resulted in a backlog of more than three years before the company finally stopped taking orders. This model is chambered for .32 Long rimfire cartridge and has a 6-shot nonfluted cylinder and 4", 5", or 6" barrel lengths. It has a square butt with rosewood grips and is either blued or nickel-plated. There were approximately 77,155 manufactured between 1861 and 1874.

NOTE: A slight premium for early two-pin model. For rare 8-inch model add 800 percent.

.32 Single-Action (Model 1-1/2 Centerfire)

This model represented the first .32 S&W centerfire caliber top-break revolver that automatically ejected the spent cartridges upon opening. It is similar in appearance to the Model 1-1/2 2nd Issue. This model has a 5-shot fluted cylinder and a bird's-head grip of wood or checkered hard rubber and was offered with barrel lengths of 3", 3.5", 6", 8", and 10". The 8" and 10" barrel are rare and were not offered until 1887. This model pivots downward on opening and features a rebounding hammer that made the weapon much safer to fully load. There were approximately 97,599 manufactured between 1878 and 1892.

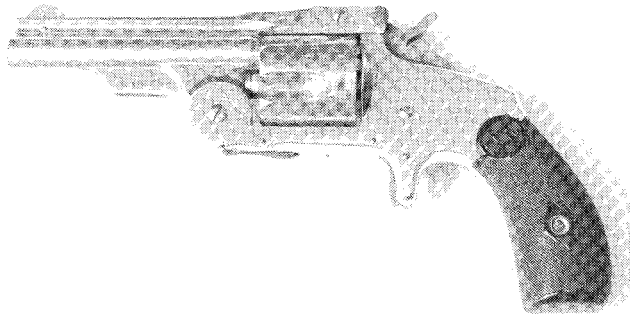
.38 Single-Action 1st Model (Baby Russian)

This model is sometimes called the "Baby Russian." It is a top break, automatic-ejecting revolver chambered for the .38 S&W centerfire cartridge. Offered with either a 3.25" or 4" round barrel with a raised rib, has a 5-shot fluted cylinder, and finished in blue or nickel plating. A 5" barrel was added as an option a short time later. The butt is rounded, with wood or checkered hard rubber grips inlaid with the S&W medallion. It has a spur trigger. Approximately 25,548 were manufactured in 1876 and 1877, of which 16,046 were nickel and 6,502 were blued.



Courtesy Mike Stuckslager

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	1200	900	350	—

.38 Single-Action 2nd Model

With the exception of an improved and shortened extractor assembly and the availability of additional barrel lengths of 3.25", 4", 5", 6", 8", and 10" with the 8" and 10" barrel lengths being the most rare, this model is quite similar in appearance to the 1st Model. There were approximately 108,225 manufactured between 1877 and 1891.

.38 Single-Action 3rd Model

This model differs from the first two models because it is fitted with a trigger guard. It is chambered for the .38 S&W centerfire cartridge, has a 5-shot fluted cylinder, and is a top break design with automatic ejection upon opening. The barrel lengths are 3.25", 4", and 6". The finish is blued or nickel-plated. The butt is rounded, with checkered hard rubber grips featuring S&W medallions. There were approximately 26,850 manufactured between 1891 and 1911.

Courtesy Mike Stuckslager

Exc.	V.G.	Good	Fair	Poor
—	1300	1000	600	—

.38 Single-Action Mexican Model

This extremely rare model is quite similar in appearance to the 3rd Model Single-Action. The notable differences are the flat hammer sides with no outward flaring of the spur. The spur trigger assembly was not made integrally with the frame but is a separate part added to it. One must exercise extreme caution as S&W offered a kit that would convert the trigger guard assembly of the Third Model to the spur trigger of the Mexican Model. This, coupled with the fact that both models fall within the same serial range, can present a real identification problem. Another feature of the Mexican Model is the absence of a half cock. The exact number of Mexican Models manufactured between 1891 and 1911 is unknown but it is estimated that the number is small.

Exc.	V.G.	Good	Fair	Poor
—	3650	1500	950	—

.32 Double-Action 1st Model

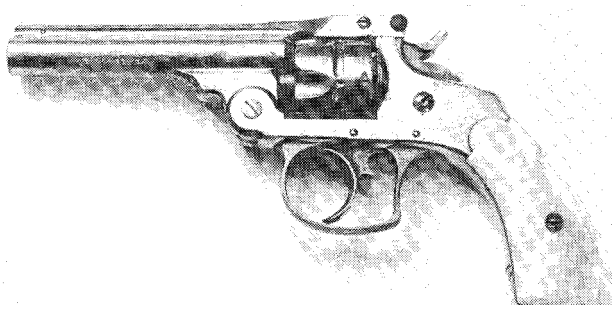
This is one of the rarest of all S&W revolvers. There were only 30 manufactured. It also has a straight-sided sideplate that weakened the revolver frame. Perhaps this was the reason that so few were made. This model was the first break-open, double-action, automatic-ejecting .32 that S&W produced. It features a 3" round barrel with raised rib, a 5-shot fluted cylinder, and round butt with plain, uncheckered, black hard rubber grips. The finish is blued or nickel-plated. All 30 of these revolvers were manufactured in 1880.

Exc.	V.G.	Good	Fair	Poor
—	12000	7500	4000	—

NOTE: Rarity makes valuation speculative.

.32 Double-Action 2nd Model

This revolver is chambered for the .32 S&W cartridge and has a 3" round barrel with a raised rib. The 5-shot cylinder is fluted, and the finish is blued or nickel-plated. It is a top break design with a round butt. The grips are either checkered or floral-embossed hard rubber with the S&W monogram. This model has an oval sideplate, eliminating the weakness of the 1st Model. There were approximately 22,142 manufactured between 1880 and 1882.

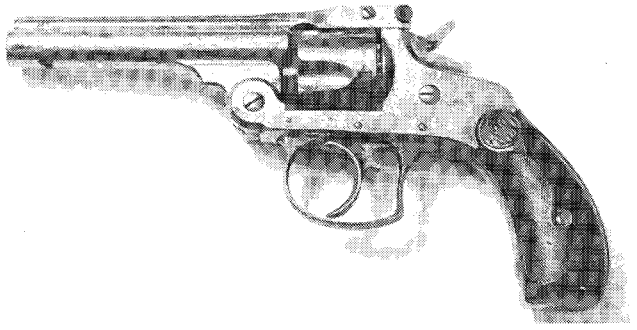


Courtesy Mike Stuckslager

Exc.	V.G.	Good	Fair	Poor
—	350	225	175	—

.32 Double-Action 3rd Model

This model incorporates internal improvements that are not evident in appearance. The most notable identifiable difference between this model and its predecessors is in the surface of the cylinder. The flutes are longer; there is only one set of stops instead of two; and the free groove is no longer present. There were approximately 21,232 manufactured in 1882 and 1883.

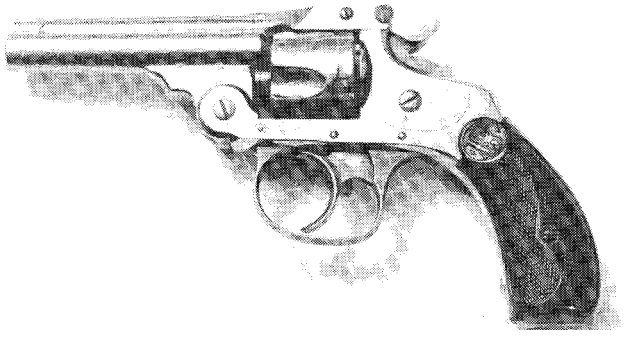


Courtesy Mike Stuckslager

Exc.	V.G.	Good	Fair	Poor
—	350	250	175	—

.32 Double-Action 4th Model

This model is quite similar in appearance to the 3rd Model except that the trigger guard is oval in shape instead of the squared back of the previous models. There were also internal improvements. There were approximately 239,600 manufactured between 1883 and 1909.



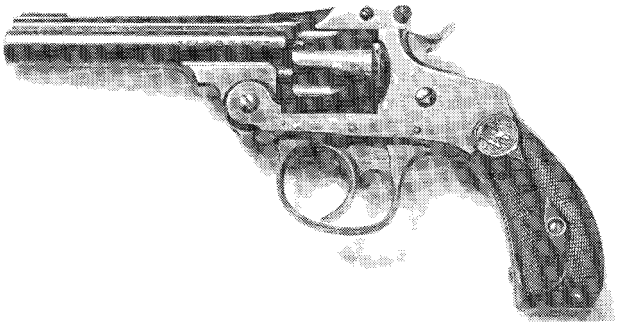
Courtesy Mike Stuckslager

Exc.	V.G.	Good	Fair	Poor
375	200	175	125	65

NOTE: Add a 50 percent premium for revolvers built before 1898.

.32 Double-Action 5th Model

The only difference between this model and its predecessors is that this model has the front sight machined as an integral part of the barrel rib. On the other models, the sight was pinned in place. There were approximately 44,641 manufactured between 1909 and 1919.



Courtesy Mike Stuckslager

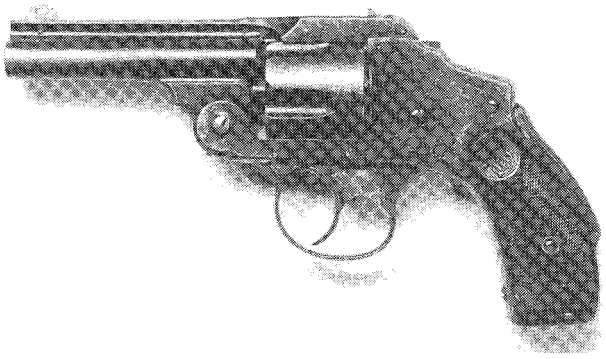
SAFETY HAMMERLESS

This model was a departure from what was commonly being produced at this time. Some attribute the Safety Hammerless design to D.B. Wesson's hearing that a child had been injured by cocking and firing one of the company's pistols. This story has never been proven. Nevertheless, the concealed hammer and grip safety make this an ideal pocket pistol for those needing concealability in a handgun. This is a small revolver chambered for .32 S&W and .38 S&W cartridges. It has a 5-shot fluted cylinder and is offered with a 2", 3", and 3.5" round barrel with a raised rib. The butt is rounded and has checkered hard rubber grips with the S&W logo. The finish is blue or nickel plated. The revolver is a top break, automatic-ejecting design; and the 1st Model has the latch for opening located in the rear center of the top strap instead of at the sides. The latch is checkered for a positive grip. This model is commonly referred to as the "Lemon Squeezer" because the grip safety must be squeezed as it is fired.



Courtesy Mike Stuckslager

NOTE: 2" barrel version add 50 percent.

Model 3 American 1st Model

This model represented a number of firsts for the Smith & Wesson Company. It was the first of the top break, automatic ejection revolvers. It was also the first Smith & Wesson in a large caliber (it is chambered for the .44 S&W American cartridge as well as the .44 Henry rimfire on rare occasions). It was also known as the 1st Model American. This large revolver is offered with an 8" round barrel with a raised rib as standard. Barrel lengths of 6" and 7" were also available. It has a 6-shot fluted cylinder and a square butt with walnut grips. It is blued or nickel-plated. It is interesting to note that this model appeared three years before Colt's Single-Action Army and perhaps, more than any other model, was associated with the historic American West. There were only 8,000 manufactured between 1870 and 1872.

Standard Production Model

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	7000	3500	1500	—

NOTE: Add 25 percent for "oil hole" variation found on approximately the first 1,500 guns. Add 50 percent for unusual barrel lengths other than standard 8". Original "Nashville Police" marked guns worth a substantial premium.

Transition Model

Serial number range 6466-6744. Shorter cylinder (1.423"), improved barrel catch.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	6000	3000	1500	—

U.S. Army Order

Serial number range 125-2199. One thousand (1,000) produced with "U.S." stamped on top of barrel; "OWA," on left grip.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	17500	7500	3000	—

.44 Rimfire Henry Model

Only 200 produced throughout serial range.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	12000	6000	3000	—

NOTE: Rarity makes valuation speculative.

Model 3 American 2nd Model

An improved version of the 1st Model. The most notable difference is the larger diameter trigger pivot pin and the frame protrusions above the trigger to accommodate it. The front sight blade on this model is made of steel instead of nickel silver. Several internal improvements were also incorporated into this model. This model is commonly known as the American 2nd Model. The 8" barrel length was standard on this model. There were approximately 20,735 manufactured, including 3,014 chambered for .44 rimfire Henry, between 1872 and 1874.

NOTE: There have been 5.5", 6", 6.5", and 7" barrels noted; but they are extremely scarce and would bring a 40 percent premium over the standard 8" model. Use caution when purchasing these short barrel revolvers.

Model 3 Russian 1st Model

This model is quite similar in appearance to the American 1st and 2nd Model revolvers. S&W made several internal changes to this model to satisfy the Russian government. The markings on this revolver are distinct; and the caliber for which it is chambered, .44 S&W Russian, is different. There were approximately 20,000 Russian-Contract revolvers. The serial number range is 1-20000. They are marked in Russian Cyrillic letters. The Russian double-headed eagle is stamped on the rear portion of the barrel with inspector's marks underneath it. All of the contract guns have 8" barrels and lanyard swivels on the butt. These are rarely encountered, as most were shipped to Russia. The commercial run of this model numbered approximately 4,655. The barrels are stamped in English and include the words "Russian Model." Some are found with 6" and 7" barrels, as well as the standard 8". There were also 500 revolvers that were rejected from the Russian contract series and sold on the commercial market. Some of these are marked in English; some, Cyrillic. Some have the Cyrillic markings ground off and the English restamped. This model was manufactured from 1871 to 1874.

Model 3 Russian 2nd Model

This revolver was known as the "Old Model Russian." This is a complicated model to understand as there are many variations within the model designation. The serial numbering is quite complex as well, and values vary greatly due to relatively minor model differences. Before purchasing this model, it would be advisable to secure competent appraisal as well as to read reference materials solely devoted to this firearm. This model is chambered for the .44 S&W Russian, as well as the .44 Henry rimfire cartridge. It has a 7" barrel and a round butt featuring a projection on the frame that fits into the thumb web. The grips are walnut, and the finish is blue or nickel-plated. The trigger guard has a reverse curved spur on the bottom. There were approximately 85,200 manufactured between 1873 and 1878.

Model 3 Russian 3rd Model

This revolver is also known as the "New Model Russian." The factory referred to this model as the Model of 1874 or the Cavalry Model. It is chambered for the .44 S&W Russian and the .44 Henry rimfire cartridge. The barrel is 6.5", and the round butt is the same humped-back affair as the 2nd Model. The grips are walnut; and the finish, blue or nickel-plated. The most notable differences in appearance between this model and the 2nd Model are the shorter extractor housing under the barrel and the integral front sight blade instead of the pinned-on one found on the previous models. This is another model that bears careful research before attempting to evaluate. Minor variances can greatly affect values. Secure detailed reference materials and qualified appraisal. There were approximately 60,638 manufactured between 1874 and 1878.

Commercial Model
.44 S&W Russian, marked "Russian Model" in English, 13,500 made.

Model 3 Russian 3rd Model (Loewe & Tula Copies)

The German firm of Ludwig Loewe produced a copy of this model that is nearly identical to the S&W. This German revolver was made under Russian contract, as well as for commercial sales. The contract model has different Cyrillic markings than the S&W and the letters "HK" as inspector's marks. The commercial model has the markings in English. The Russian arsenal at Tula also produced a copy of this revolver with a different Cyrillic dated stamping on the barrel.

Model 3 Schofield—Surplus Models

After the government dropped the Schofield as an issue cavalry sidearm, the remaining U.S. inventory of these revolvers was sold off as military surplus. Many were sold to National Guard units; and the remainder were sold either to Bannerman's or to Schuyler, Hartley & Graham, two large gun dealers who then resold the guns to supply the growing need for guns on the Western frontier. Schuyler, Hartley & Graham sold a number of guns to the Wells Fargo Express Co. These weapons were nickel-plated and had the barrels shortened to 5", as were many others sold during this period. Beware of fakes when contemplating purchase of the Wells Fargo revolvers.

NEW MODEL NO. 3 SINGLE-ACTION

Always interested in perfecting the Model 3 revolver D.B. Wesson redesigned and improved the old Model 3 in the hopes of attracting more sales. The Russian contracts were almost filled so the company decided to devote the effort necessary to improve on this design. In 1877 this project was undertaken. The extractor housing was shortened; the cylinder retention system was improved; and the shape of the grip was changed to a more streamlined and attractive configuration. This New Model has a 3.5", 4", 5", 6", 6.5", 7", 7.5", or 8" barrel length with a 6-shot fluted cylinder. The 6.5" barrel and .44 S&W Russian chambering is the most often encountered variation of this model, but the factory considered the 3-1/2" and 8" barrels as standard and these were kept in stock as well. The New Model No. 3 was also chambered for .32 S&W, .32-44 S&W, .320 S&W Rev. Rifle, .38 S&W, .38-40, .38-44 S&W, .41 S&W, .44 Henry rimfire, .44 S&W American, .44-40, .45 S&W Schofield, .450 Rev., .45 Webley, .455 MkI and .455 MkII. They are either blued or nickel-plated and have checkered hard rubber grips with the S&W logo molded into them, or walnut grips. There are many sub-variations within this model designation, and the potential collector should secure detailed reference material that deals with this model. There were approximately 35,796 of these revolvers manufactured between 1878 and 1912. Nearly 40 percent were exported to fill contracts with Japan, Australia, Argentina, England, Spain, and Cuba. There were some sent to Asia, as well. The proofmarks of these countries will establish their provenance but will not add appreciably to standard values.

Standard Model

6.5" barrel, .44 S&W Russian.

—	5000	2500	1250	—

Maryland Militia Model

This variation is nickel-plated, has a 6.5" barrel, and is chambered for the .44 S&W Russian cartridge. The butt is stamped "U.S.," and the inspector's marks "HN" and "DAL" under the date 1878 appear on the revolver. There were 280 manufactured between serial-numbers 7126 and 7405.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	10000	6000	3000	—

NOTE: Rarity makes valuation speculative.

Argentine Model

This was essentially not a factory contract but a sale through Schuyler, Hartley and Graham. They are stamped "Ejercito/Argentino" in front of the trigger guard. The order amounted to some 2,000 revolvers between the serial numbers 50 and 3400.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	7000	3500	1750	—

Australian Contract

This variation is nickel-plated, is chambered for the .44 S&W Russian cartridge, and is marked with the Australian Colonial Police Broad Arrow on the buff. There were 250 manufactured with 7" barrels and detachable shoulder stocks. The stock has the Broad Arrow stamped on the lower tang. There were also

30 manufactured with 6.5" barrels without the stocks. They all are numbered in the 12000-13000 serial range.

Turkish Model

This is essentially the New Model No. 3 chambered for the .44 rimfire Henry cartridge. It is stamped with the letters "P," "U" and "AFC" on various parts of the revolver. The barrels are all 6.5"; the finish, blued with walnut grips. Lanyard swivels are found on the butt. There were 5,461 manufactured and serial numbered in their own range, starting at 1 through 5461 between 1879 and 1883.

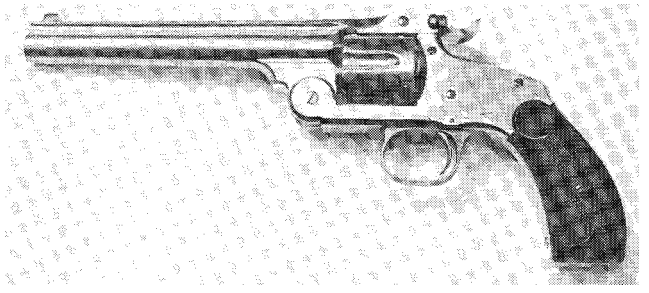
—	7000	3500	1750	—

New Model No. 3 Target Single-Action

This revolver is similar in appearance to the standard New Model No. 3, but was the company's first production target model. It has a 6.5" round barrel with a raised rib and 6-shot fluted cylinder and is finished in blue or nickel-plated. The grips are either walnut or checkered hard rubber with the S&W logo molded into them. This model is chambered in either .32 S&W or.38 S&W. The company referred to these models as either the .32-44 Target or the .38-44 Target depending on the caliber. The designation of .44 referred to the frame size, i.e. a .32 caliber built on a .44 caliber frame. This model was offered with a detachable shoulder stock as an option. These stocks are extremely scarce on today's market. There were approximately 4,333 manufactured between 1887 and 1910.



Courtesy Mike Stuckslager

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	3100	1350	850	—

NOTE: Shoulder stock add 50 percent.

New Model No. 3 Frontier Single-Action

This is another model similar in appearance to the standard New Model No. 3. It has a 4", 5", or 6.5" barrel and is chambered for the .44-40 Winchester Centerfire cartridge. Because the original New Model No. 3 cylinder was 1-7/16" in length this would not accommodate the longer .44-40 cartridge. The cylinder on the No. 3 Frontier was changed to 1-9/16" in length. Later the company converted 786 revolvers to .44 S&W Russian and sold them to Japan. This model is either blued or nickel-plated and has checkered grips of walnut or hard rubber. They are serial numbered in their own range from 1 through 2072 and were manufactured from 1885 until 1908. This model was designed to compete with the Colt Single-Action Army but was not successful.

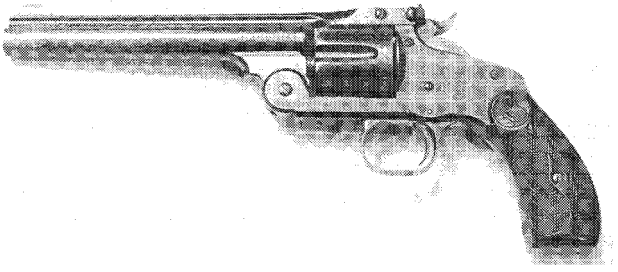
—	4000	2000	1000	—

New Model No. 3—.38 Winchester

This variation was the last of the New Model No. 3s to be introduced. It was offered in .38-40 Winchester as a separate model from 1900 until 1907. The finish is blue or nickel-plate, and the grips are checkered hard rubber or walnut. Barrel lengths of 4" or 6.5" were offered. This model was not at all popular, as only 74 were manufactured in their own serial range 1 through 74. Today's collectors are extremely interested in this extremely rare model.



Courtesy Mike Stuckslager

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	14000	8000	4000	—

NOTE: Rarity makes valuation speculative. A New Model #3 .38 Winchester in Good condition was offered in Old Town Station Dispatch for $6,850 in 1999.

.44 Double-Action 1st Model

This model is a top break revolver that automatically ejects the spent cartridge cases upon opening. The barrel latch is located at the top and rear of the cylinder; the pivot, in front and at the bottom. This model was also known as "The D.A. Frontier" or "The New Model Navy." The revolver is chambered for the .44 S&W Russian and was built on a modified Model 3 frame. It is also found on rare occasions chambered for the .38-40 and the .44-40 Winchester. The barrel lengths are 4", 5", 6", and 6.5", round with a raised rib. A 3-1/2" barrel was produced on this model by special request. Collectors should be aware that the barrel for this model and the New Model No. 3 were interchangeable and the factory did in fact use barrels from either model. The serial number on the rear of the barrel should match the number on the butt, cylinder and barrel latch. The cylinder holds 6 shots and is fluted. It has double sets of stop notches and long free grooves between the stops. It is serial numbered in its own range, beginning at 1. There were approximately 54,000 manufactured between 1881 and 1913.

Model .44 Double-Action Wesson Favorite

The Favorite is basically a lightened version of the 1st Model D.A. .44. The barrel is thinner and is offered in 5" length only. There are lightening cuts in the frame between the trigger guard and the cylinder; the cylinder diameter was smaller, and there is a groove milled along the barrel rib. The Favorite is chambered for the .44 S&W Russian cartridge and has a 6-shot fluted cylinder with the same double-cylinder stop notches and free grooves as the 1st Model Double-Action .44. The company name and address, as well as the patent dates, are stamped into the edge of the cylinder instead of on the barrel rib. It is serial-numbered in the same range, between 9000 and 10100. The revolver was most often nickel-plated but was also offered blued. The grips are walnut or checkered hard rubber with the S&W logo molded in. There were approximately 1,000 manufactured in 1882 and 1883. Use caution when purchasing a blued model.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
—	9000	5000	2500	—

NOTE: Rarity makes valuation speculative. Blued finish add 25 percent.

Model .44 Double-Action Frontier

Chambered for the .44-40 cartridge. This is a separate model from the .44 Double-Action 1st Model. It has a longer 19/16" cylinder like the later .44 double-action 1st Model's. Produced from 1886 to 1916 with their own serial number range. Approximately 15,340 built.

—	5500	3000	1250	—

1st Model Single-Shot

This unusual pistol combines the frame of the .38 Single-Action 3rd Model with a single-shot barrel. This model is a top break and functions exactly as the revolver models do. The barrel length is 6", 8", or 10"; and the pistol is chambered for .22 LR, .32 S&W, and .38 S&W. The finish is blue or nickel plated, with a square butt. The grips are checkered hard rubber extension types for a proper target hold. This pistol is considered quite rare on today's market, as only 1,251 were manufactured between 1893 and 1905.

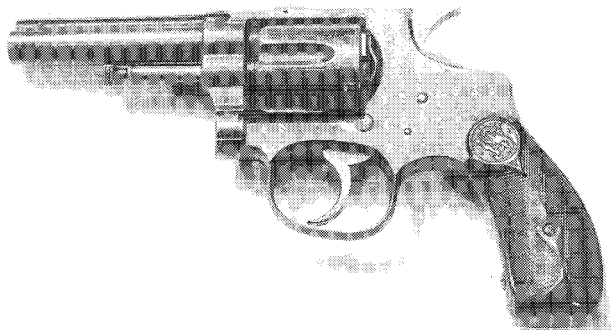
1500	1100	700	500	300

.32 Hand Ejector Model of 1896 or .32 Hand Ejector 1st Model

This model was the first time S&W made a revolver with a swing-out cylinder. Interestingly, there is no cylinder latch; but the action opens by pulling forward on the exposed portion of the cylinder pin. This frees the spring tension and allows the cylinder to swing free. Another novel feature of this model is the cylinder stop location, which is located in the top of the frame over the cylinder. This model is chambered for the .32 S&W Long cartridge, has a 6-shot fluted cylinder, and is offered with 3.25", 4.25", and 6" long barrels. It is available with either a round or square butt, has checkered hard rubber grips, and is blued or nickel-plated. Factory installed target sights were available by special order. The company name, address, and patent dates are stamped on the cylinder instead of on the barrel. There were approximately 19,712 manufactured between 1896 and 1903.



Courtesy Mike Stuckslager

Exc.	V.G.	Good	Fair	Poor
600	425	350	200	150

Hand Ejector Model of 1903

This model is quite different from its predecessor. The cylinder locks front and back; the cylinder stop is located in the bottom of the frame, and the familiar sliding cylinder latch is found on the left side of the frame. The barrel lengths are 3.25", 4.25", and 6". The 6-shot cylinder is fluted, and the revolver is chambered for .32 S&W Long. It is offered either blued or nickel-plated, and the round butt grips are checkered hard rubber. There were approximately 19,425 manufactured in 1903 and 1904; serial number range 1 to 19425.

Exc.	V.G.	Good	Fair	Poor
350	250	200	150	100

.32 Hand Ejector Model of 1903 1st Change

This model differs from the model of 1903 internally, and the serial number range 19426 to 51126 is really the only way to differentiate the two. There were approximately 31,700 manufactured between 1904 and 1906.

Exc.	V.G.	Good	Fair	Poor
350	250	200	150	100

.32 Hand Ejector Model of 1903 2nd Change

Produced from 1906 to 1909 in serial number range 51127 to 95500. A total of 44,373 manufactured.

.32 Hand Ejector Model of 1903 3rd Change

Produced from 1909 to 1910 in serial number range 95501 to 96125. A total of 624 manufactured.

.32 Hand Ejector Model of 1903 4th Change

Produced in 1910 in serial number range 96126 to 102500. A total of 6,374 manufactured.

.32 Hand Ejector Model of 1903 5th Change

Produced from 1910 to 1917 in serial number range 102500 to 263000. A total of 160,500 manufactured.

.32 Hand Ejector Third Model

Produced from 1911 to 1942 in serial number range 263001 to 536684. A total of 273,683 were manufactured.

Exc.	V.G.	Good	Fair	Poor
350	200	150	125	90

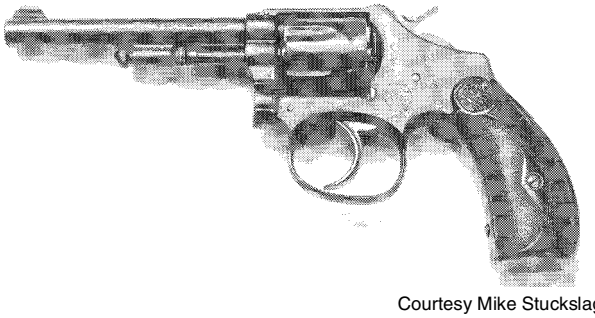
.22 Ladysmith 1st Model

This model was designed primarily as a defensive weapon for women. Its small size and caliber made it ideal for that purpose. The 1st Model Ladysmith is chambered for .22 Long cartridge and has a 7-shot fluted cylinder and 3" and 3.5" barrel lengths. This little revolver weighed 9-5/8 ounces. It is either blued or nickel-plated and has a round butt with checkered hard rubber grips. The 1st Model has a checkered cylinder-latch button on the left side of the frame. There were approximately 4,575 manufactured between 1902 and 1906.

Exc.	V.G.	Good	Fair	Poor
1900	1250	850	650	450

.22 Ladysmith 2nd Model

This is essentially quite similar in appearance to the 1st Model, the difference being in the pull-forward cylinder latch located under the barrel, replacing the button on the left side of the frame. The new method allowed lockup front and back for greater action strength. The 2.25" barrel length was dropped; caliber and finishes are the same. There were approximately 9,374 manufactured between 1906 and 1910; serial number range 4576 to 13950.

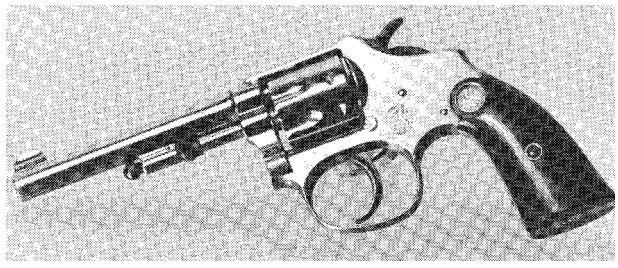


Courtesy Mike Stuckslager

Exc.	V.G.	Good	Fair	Poor
1650	950	800	600	400

.22 Ladysmith 3rd Model

This model is quite different in appearance to the 2nd Model, as it features a square butt and smooth walnut grips with inlaid S&W medallions. The barrel lengths remained the same, with the addition of a 2.25" and 6" variation. The under barrel cylinder lockup was not changed, nor were the caliber and finishes. There were approximately 12,200 manufactured between 1910 and 1921; serial number range 13951 to 26154.



Courtesy W.P. Hallstein III and son Chip

Exc.	V.G.	Good	Fair	Poor
1500	1000	800	600	400

NOTE: Add a 50 percent premium for 2.25" and 6" barrel lengths.

.38 Hand Ejector Military & Police 1st Model or Model of 1899

This was an early swing-out cylinder revolver, and it has no front lockup for the action. The release is on the left side of the frame. This model is chambered for .38 S&W Special cartridge and the .32 Winchester centerfire cartridge (.32-20), has a 6-shot fluted cylinder, and was offered with a 4", 5", 6", 6.5", or 8" barrel in .38 caliber and 4", 5", and 6-1/2" in .32-20 caliber. The finish is blued or nickel-plated; the grips, checkered walnut or hard rubber. There were approximately 20,975 manufactured between 1899 and 1902 in .38 caliber; serial number range 1 to 20975. In the .32-20 caliber 5,311 were sold between 1899 and 1902; serial number range 1 to 5311.

.38 Hand Ejector M&P 2nd Model or Model of 1902

The 2nd Model is similar in appearance to the 1st Model. The major difference is the addition of the front lockup under the barrel, and the ejector rod was increased in diameter. Barrel lengths for the .38 S&W were 4", 5", 6", or 6-1/2" while the .32-20 was available in 4", 5", or 6-1/2" barrel lengths. Both calibers were offered in round butt only configuration. There were approximately 12,827 manufactured in .38 S&W in 1902 and 1903; serial number range 20976 to 33803. In the .32-20 caliber 4,499 were produced; serial number range 5312 to 9811.

Exc.	V.G.	Good	Fair	Poor
550	350	300	250	100

.38 Hand Ejector M&P 2nd Model, 1st Change

Built between 1903 and 1905 this variation represents the change to the square butt, which made for better shooting control and standardized frame shape. Both the .38 S&W and the .32-20 were available in 4", 5", or 6-1/2" barrel lengths. The company manufactured 28,645 .38 calibers; serial number range 33804 to 62449 and produced 8,313 .32-20s; serial number 9812 to 18125.

550	350	300	250	100

.38 Hand Ejector Model of 1905

This model was a continuation of the .38 M&P Hand Ejector series. Built from 1905 to 1906 it was available in 4", 5", 6", and 6-1/2" barrels for both the .38 and .32-20 calibers. Finished in either blue or nickel with round or square butt the .38 caliber model serial number range was from 62450 to 73250 or about 10,800 produced. The .32-20 caliber serial number range spans 18126 to 22426 or 4,300 produced.

Exc.	*V.G.*	*Good*	*Fair*	*Poor*
650	475	300	250	150

NOTE: Prices for the following four variations will be the same as those noted above.

.38 Hand Ejector Model of 1905, 1st Change

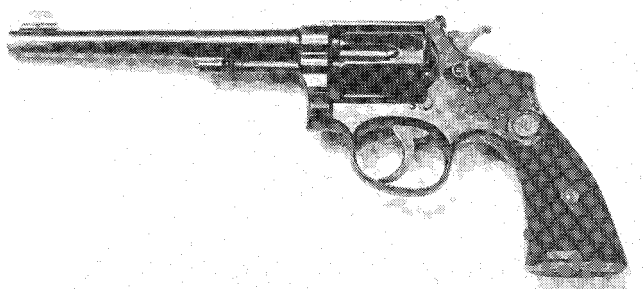
Produced from 1906 to 1908 this model is similar to the original model of 1905 with regard to barrel lengths, finish and butt styles. The 1st change in .38 caliber was produced in serial number range 73251 to 120000 with 46,749 sold. In .32-20 caliber the serial-number range was 22427 to 33500 with 11,073 sold.

.38 Hand Ejector Model of 1905, 2nd Change

Produced from 1908 to 1909 only internal changes were made to this model. The best approach to differentiate this model is by serial number. The .38 caliber serial number range was from 120001 to 146899 with 26,898 produced. In the .32-20 caliber the serial number range is between 33501 and 45200 with 11,699 produced.

.38 Hand Ejector Model of 1905, 3rd Change

Produced from 1909 to 1915 the 3rd Change variation was available in only 4" or 6" barrel lengths for both the .38 and .32-20 models. The .38 caliber serial number range was between 146900 to 241703 with 94,803 sold.



Courtesy Mike Stuckslager

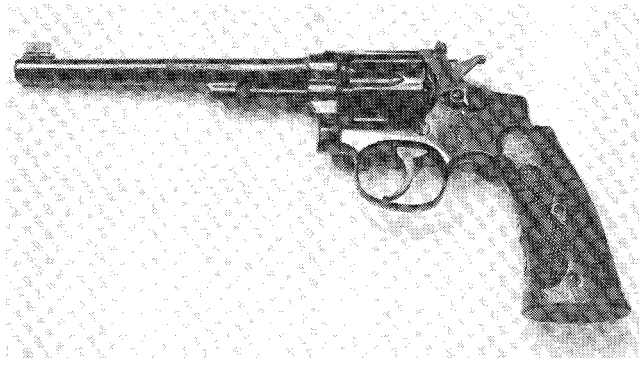
.38 Hand Ejector Model of 1905, 4th Change

This last variation was also the longest production run. Produced from 1915 to 1942 the .38 caliber model was available in 2", 4", 5", or 6", barrel lengths while the .32-20 caliber was offered in 4", 5", or 6" barrel lengths. The .38 caliber serial number range was from 241704 to 1000000. The .32-20 caliber model was produced from 1915 to 1940 in serial number range from 65701 to 144684.

Courtesy Mike Stuckslager

.22-32 Hand Ejector

This is a very interesting model from the collector's point of view. Phillip B. Bekeart, a San Francisco firearms dealer requested that S&W manufacture a .22 caliber target-grade revolver on the heavier .32 frame. He believed in his idea so passionately that he immediately ordered 1,000 of the guns for himself. This initial order is found within the serial number range 1 to 3000 and are known to collectors as the authentic Bekearts. The remainder of the extensive production run are simply .22-32 Hand Ejectors. This model is chambered for .22 LR cartridge and has a 6-shot fluted cylinder with 6" barrel. The finish is blue, with square butt and checkered extension-type walnut grips. There were only 292 revolvers of his initial order delivered to Mr. Bekeart, but the first 1,000 pistols are considered to be True Bekearts. The production number of each respective pistol is stamped into the base of the extended wooden grips. S&W went on to manufacture several hundred thousand of these revolvers between 1911 and 1953.



Courtesy Mike Stuckslager

"The True Bekeart"

Serial number range 138226 to 139275 in the .32 Hand Ejector series, production number stamped on butt. Professional appraisal should be secured.

.44 Hand Ejector 1st Model

This model is also known by collectors as the ".44 Triple Lock" or "The New Century." The Triple Lock nickname came from a separate locking device located on the extractor rod shroud that is used in addition to the usual two locks. This model is chambered for the .44 S&W Special cartridge or the .44 S&W Russian. On a limited basis it is also chambered in .44-40, .45 Colt, and .38-40. The fluted cylinder holds 6 shots, and the barrel was offered in standard lengths of 5" or 6.5". A limited quantity of 4" barrel was produced. The finish is blued or nickel-plated; and the grips are checkered walnut, with the gold S&W medallion on later models. There were approximately 15,375 manufactured between 1908 and 1915.

.44 Hand Ejector 2nd Model

This model is quite similar in appearance to the 1st Model. The major difference is the elimination of the third or triple lock device and the heavy ejector rod shroud. Other changes are internal and not readily apparent. This model is also standard in .44 S&W Special chambering but was offered rarely in .38-40, .44-40, and .45 Colt. Specimens have been noted with adjustable sights in 6-1/2" barrel lengths. Standard barrel lengths were 4", 5", and 6-1/2". There were approximately 17,510 manufactured between 1915 and 1937 in serial number range 15376 to 60000.

.44 Hand Ejector 3rd Model or Model of 1926

This model is similar in appearance to the 2nd Model but brought back the heavy ejector rod shroud of the 1st Model without the triple lock device. Barrel lengths were 4", 5", and 6-1/2". The .44 Hand Ejector Model was manufactured between 1926 and 1949.

VALUE TRACKER: SMITH & WESSON N-FRAME REVOLVERS

Until the recent advent of Smith & Wesson's X-frame revolvers, the N-frame was the biggest, baddest family of double-action revolvers the world had ever seen. Introduced in the .44 Hand Ejector First Model (aka the" New Century" and "Triple Lock") of 1907/1908, the N-frame displayed a combination of smoothness and robustness that was never seriously challenged by any other 20th-century double-action revolver, with the possible exception of the Colt New Service. N-frames in all chamberings are extremely hot these days – and deservedly so, as they were among the finest mass-produced firearms of all time. Still, there are good deals to be had. Note also the increasingly values for the .38/44 N-frames, even the formerly-forlorn Highway Patrolman/Model 28.

.45 Hand Ejector U.S. Service Model of 1917

WWI was on the horizon, and it seemed certain that the United States would become involved. The S&W people began to work with the Springfield Armory to develop a hand ejector model that would fire the .45-caliber Government cartridge. This was accomplished in 1916 by the use of half-moon clips. The new revolver is quite similar to the .44 Hand Ejector in appearance. It has a 5.5" barrel, blued finish with smooth walnut grips, and a lanyard ring on the butt. The designation "U.S.Army Model 1917" is stamped on the butt. After the war broke out, the government was not satisfied with S&W's production and actually took control of the company for the duration of the war. This was the first time that the company was not controlled by a Wesson. The factory records indicate that there were 163,476 Model 1917s manufactured between 1917 and 1919, the WWI years. After the war, the sale of these revolvers continued on a commercial and contract basis until 1949, when this model was finally dropped from the S&W product line.

.455 Mark II Hand Ejector 1st Model

This model was designed the same as the .44 Hand Ejector 1st Model with no caliber stamping on the barrel. It has a barrel length of 6.4". Of the 5,000 revolvers produced and sold only 100 were commercial guns, the rest were military. Produced between 1914 and 1915. The commercial model is worth a premium.

S&W .35 Automatic Pistol

Production of the .35 Automatic was S&W's first attempt at an auto-loading pistol. As was always the case, the company strived for maximum safety and dependability. This model has a 3.5" barrel and a 7-shot detachable magazine and is chambered in .35 S&W Automatic, a one-time-only cartridge that eventually proved to be the major downfall of this pistol from a commercial standpoint. There were two separate safety devices—a revolving cam on the backstrap and a grip safety on the front strap that had to be fully depressed simultaneously while squeezing the trigger. The finish is blue or nickel-plated; and the grips are walnut, with the S&W inlaid medallions. The magazine release slides from side to side and is checkered, expensive to manufacture, and destined to be modified. There were approximately 8,350 manufactured.

S&W .32 Automatic Pistol

In 1921 it became apparent to the powers that controlled S&W that the .35-caliber automatic was never going to be a commercial success. Harold Wesson, the new president, began to redesign the pistol to accept the .32 ACP, a commercially accepted cartridge, and to streamline the appearance to be more competitive with the other pistols on the market, notably Colt's. This new pistol used as many parts from the older model as possible for economy's sake. The pivoting barrel was discontinued, as was the cam-type safety in the rear grip strap. A magazine disconnector and a reduced-strength recoil spring to ease cocking were employed. The barrel length was kept at 3.5", and the 7-shot magazine was retained. The finish is blued only, and the grips are smooth walnut. There were only 957 of these manufactured between 1924 and 1936. They are eagerly sought by collectors.

SMITH & WESSON MODERN HANDGUNS

NOTE: A surprising number of pistols are still found in their original boxes even for older models. This can add 100 percent to the value of the pistol.

With the development of the Hand Ejector Models and the swingout cylinders, Smith & Wesson opened the door to a number of new advancements in the revolver field. This new system allowed for a solid frame, making the weapon much stronger than the old top break design. The company also developed different basic frame sizes and gave them letter

designations. The I frame, which later developed into the slightly larger J frame, was used for the .22-32 and the small, concealable .38 revolvers. The medium K frame was used for .38 duty- and target-type weapons. The N frame was the heavy-duty frame used for the larger .357 and .44 and .45 caliber revolvers. The hand ejector went through many evolutionary changes over the years. We strongly recommend that the collector secure a detailed volume that deals exclusively with Smith & Wesson (see the bibliography), and learn all that is available on this fascinating firearm. Models are catalogued the by their numerical designations, brief description are given, and current values offered. It is important to note that the S&W revolver that we see marketed by the company today has undergone many changes in reaching its present configuration. The early models featured five screws in their construction, not counting the grip screw. There were four screws fastening the sideplate and another through the front of the trigger guard that retained the cylinder stop plunger. The first change involved the elimination of the top sideplate screw, and the five-screw Smith & Wesson became the four-screw. Later the frame was changed to eliminate the cylinder stop plunger screw, and the three-screw was created. Some models were offered with a flat cylinder latch that was serrated instead of the familiar checkering. Recently in 1978, the method of attaching the barrel to the frame was changed; and the familiar pin was eliminated. At the same time, the recessed cylinder commonly found on magnum models was also eliminated. All of these factors have a definite affect on the value and collectibility of a particular S&W handgun.

NOTE: The pre-model number designations are listed in parentheses after the model number.

IMPORTANT PRICING INFORMATION

Values reflected will be affected by the following factors:

Five Screw Models add 40 to 50 percent.
Four Screw Models add 30 percent.
Models with flat latches add 20 percent.
Models not pinned or recessed deduct 10 percent.

Courtesy Smith & Wesson

Model 10 (.38 Military & Police)

This model has been in production in one configuration or another since 1899. It was always the mainstay of the S&W line and was originally known as the .38 Military and Police Model. The Model 10 is built on the K, or medium frame, and was always meant as a duty gun. It was offered with a 2", 3", 4", 5", or 6" barrel. Currently only the 4" and 6" are available. A round or square butt is offered. It is chambered for the .38 Special and is offered in blue or nickel-plate, with checkered walnut grips. The model designation is stamped on the yoke on all S&W revolvers. This model, with many other modern S&W pistols, underwent several engineering changes. These changes may affect the value of the pistol and an expert should be consulted. The dates of these changes are as follows:

10-None-1957	**10-1-1959**	**10-2-1961**
10-3-1961	**10-4-1962**	**10-5-1962**

Model 11 (.38/200 British)

First produced in 1947 S&W received many contracts for this service pistol. Nicknamed the .38/200 British Service Revolver, the company sold many of these models throughout the 1950s and 1960s. There are several rare variations of this model that will greatly affect its value. Consult an expert if special markings and barrel lengths are encountered.

Model 19 (.357 Combat Magnum)

Introduced in 1954 at the urging of Bill Jordan, a competition shooter with the U.S. Border Patrol who went on to become a respected gun writer, this model is one of Smith and Wesson's most popular pistols. It was built on the "K-Frame" and was the

first medium frame revolver chambered for the powerful .357 Magnum cartridge. Since its inception the Model 19 has been one of S&W's most popular revolvers. It was the first revolver to be introduced as a three-screw model. Originally it was offered with a 4" heavy barrel with extractor shroud; the 6" became available in 1963. The finish is blued or nickel plated, and the grips are checkered walnut. The Goncalo Alves target stocks first appeared in 1959. In 1968 a 2.5" round butt version was introduced. The Model 19 has been the basis for two commemoratives—the Texas Ranger/with Bowie Knife and the Oregon State Police/with Belt Buckle. This model is no longer in production.

Model 20 (.38/.44 Heavy Duty)

Known as the ".38/.44 Heavy Duty" before the change to numerical designations this model was brought out in 1930 in response to requests from law enforcement personnel for a more powerful sidearm. This model, along with the .38-44 S&W Special cartridge, was an attempt to solve the problem. The revolver was manufactured with a standard 5" long barrel but has been noted rarely as short as 3-1/2" and as long as 8-3/8". It was built on the large N-frame and is blued or nickel-plated, with checkered walnut grips. Eventually the popularity of the .357 Magnum made the Model 20 superfluous, and it was discontinued in 1966. Post-war production for this model was about 20,000 revolvers.

Model 26 (1950 .45 Target)

This is the numerical designation of the 1950 .45 Target Model. This large N-frame revolver is basically the same as the Model 25 but has a lighter, thinner barrel. This caused its unpopularity among competitive shooters who wanted a heavier revolver. This brought about the Model 25 and the demise of the Model 26 in 1961 after only 2,768 were manufactured. The Model 26 also has two additional variations and are marked 26-1 and 26-2.

Factory Registered .357 Magnum

In the early 1930s, a gun writer named Phillip B. Sharpe became interested in the development of high performance loads to be used in the then-popular .38-44 S&W revolvers. He repeatedly urged the company to produce a revolver especially made to handle these high pressure loads. In 1934 S&W asked Winchester to produce a new cartridge that would create the ballistics that Sharpe was seeking. This new cartridge was made longer than the standard .38 Special case so that it could not inadvertently be fired in an older gun. The company never felt that this would be a commercially popular venture and from the onset visualized the ".357 Magnum" as a strictly deluxe hand-built item. They were to be individually numbered, in addition to the serial number, and registered to the new owner. The new Magnum was to be the most expensive revolver in the line. The gun went on the market in 1935, and the first one was presented to FBI Director J. Edgar Hoover. The gun was to become a tremendous success. S&W could only produce 120 per month, and this did not come close to filling orders. In 1938 the practice of numbering and registering each revolver was discontinued after 5,500 were produced. The ".357 Magnum," as it was designated, continued as one of the company's most popular items.

The Factory Registered Model was built on the N-frame. It could be custom ordered with any barrel length from 3.5" up to 8-3/8". The finish is blue, and the grips are checkered walnut. This model was virtually hand-built and test targeted. A certificate of registration was furnished with each revolver. The registration number was stamped on the yoke of the revolver with the prefix "Reg." This practice ceased in 1938 after 5,500 were produced.

Model 27 (.357 Magnum)

In 1948 after the end of WWII, production of this revolver commenced. The new rebound slide operated hammer block and short throw hammer were utilized, and the barrel lengths offered were 3.5", 5", 6", 6-1/2", and 8-3/8". In 1957 the model designation was changed to Model 27; and in 1975 the target trigger, hammer and Goncalo Alves target grips were made standard. This revolver is still available from S&W and has been in production longer than any other N-frame pistol. Some additional variations may be of interest to the collector. Around serial number SI71584 the three-screw side plate model was first produced. In 1960 the model designation -1 was added to the model to indicate the change to a left-hand thread to the extractor rod. In 1962 the cylinder stop was changed, which disposed of the

need for a plunger spring hole in front of the trigger guard. This change was indicated by a -2 behind the model number.

Model 28 (Highway Patrolman)

The Model 27 revolver was extremely popular among law enforcement officers, and many police agencies were interested in purchasing such a weapon—except for the cost. In 1954 S&W produced a new model called, at the time, the "Highway Patrolman." This model had all the desirable performance features of the deluxe Model 27 but lacked the cosmetic features that drove up the price. The finish is a matte blue; the rib is sandblasted instead of checkered or serrated, and the grips are the standard checkered walnut. Barrel lengths are 4" and 6.5". On late models the 6.5" barrel was reduced to 6", as on all S&Ws. The model designation was changed to Model 28 in 1957. S&W discontinued the Model 28 in 1986.

Model 29 (.44 Magnum)

In the early 1950s, handgun writers, under the leadership of Elmer Keith, were in the habit of loading the .44 Special cartridge to high performance levels and firing them in the existing .44 Hand Ejectors. They urged S&W to produce a revolver strong enough to consistently fire these heavy loads. In 1954 Remington, at the request of S&W produced the .44 Magnum cartridge. As was the case with the .357 Magnum, the cases were longer so that they would not fit in the chambers of the older guns. The first .44 Magnum became available for sale in early 1956. The first 500 were made with the 6.5" barrel; the 4" became available later that year. In 1957 the model designation was changed to 29, and the 8-3/8" barrel was introduced. The Model 29 is available in blue or nickel-plate. It came standard with all target options and was offered in a fitted wood case. The Model 29 is considered by many knowledgeable people to be the finest revolver S&W has ever produced. The older Model 29 revolvers are in a different collector category than most modern S&W revolvers. The early four-screw models can be worth a 50 percent premium in excellent condition. These early models were produced from 1956 to 1958 and approximately 6,500 were sold. One must regard these revolvers on a separate basis and have them individually appraised for proper valuation. In 1993 the 4" barrel was dropped from production. This model is no longer in production.

Model 629 Mountain Gun

This limited edition 6-shot revolver, introduced in 1993, features a 4" barrel chambered for the .44 Magnum. Built on the large N frame this pistol is made from stainless steel and is drilled and tapped for scope mounts. It is equipped with a Hogue round butt rubber monogrip. Standard sights are a pinned black ramp front sight and an adjustable black rear blade. Weight is approximately 40 oz. Model was re-introduced in 1999.

Model 30 (The .32 Hand Ejector)

This model was built on the small I frame and based on the .32 Hand Ejector Model of 1903. This older model was dropped from production in 1942. It was re-introduced in 1949 in a more modern version but still referred to as the .32 Hand Ejector. In 1957 the model designation was changed to Model 30. In 1960 this frame size was dropped, and the J frame, which had been in use since 1950, became standard for the Model 30. S&W stamped -1 behind the model number to designate this important change in frame size. The Model 30 is chambered for the .32 S&W long cartridge. It has a 6-shot cylinder and 2", 3", 4", and 6" barrel lengths. It has fixed sights and is either blued or nickel-plated. The butt is round, with checkered walnut grips. It was discontinued in 1976.

Model 32 (.38/.32 Terrier)

This model, known as the Terrier prior to 1957, was introduced in 1936. It is essentially a .38 Regulation Police chambered for .38 S&W and with a 2" barrel and round butt. Like the Model 30 and 31 this revolver was originally built on the I-frame, which was changed to the J frame in 1960. The -1 behind the model number signifies this change. It is offered in blue or nickel-plate and has a 5-shot cylinder, fixed sights, and checkered walnut grips. This model was discontinued in 1974.

Exc.	V.G.	Good	Fair	Poor

Model 34 (.22/.32 Kit Gun)

Introduced in 1936 as the .22-32 Kit Gun, it has a 2" or 4" barrel, either round or square butt, and adjustable sights. This model underwent several modifications before it reached its present form. S&W modernized this revolver in 1953 with the addition of a coil mainspring and micro-click sights. The Model 34 is built on this improved version. The revolver is a .32 Hand Ejector chambered for the .22 rimfire. It is built on the I frame until 1960 when the changeover to the improved J frame occurred. The -1 behind the model number indicates this variation. The Model 34 is offered blued or nickel-plate.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

Model 37

Introduced in 1952 as the Chief's Special Airweight, this revolver initially had an alloy frame and cylinder. In 1954, following many complaints regarding damaged revolvers, the cylinders were made of steel. Barrel lengths, finishes, and grip options on the Airweight are the same as on the standard Chief Special. In 1957 the Model 37 designation was adopted. These early alloy frame and cylinder revolvers were designed to shoot only standard velocity .38 Special cartridges. The use of high velocity ammunition was not recommended by the factory.

Model 38 (Airweight Bodyguard)

This model was introduced in 1955 as the Airweight Bodyguard. This was a departure from S&W's usual procedure in that the alloy-framed version came first. The Model 38 is chambered for .38 Special and is available with a 2" barrel standard. Although a 3" barrel was offered, it is rarely encountered. The frame of the Bodyguard is extended to conceal and shroud the hammer but at the same time allow the hammer to be cocked by the thumb. This makes this model an ideal pocket revolver, as it can be drawn without catching on clothing. It is available either blue or nickel-plated, with checkered walnut grips.

475	400	350	300	250	200

Model 469

The Model 469 was brought out in answer to the need for a more concealable high-capacity pistol. It is essentially a "Mini"

version of the Model 459. It is chambered for the 9mm Parabellum and has a 12-round detachable magazine with a finger-grip extension and a shortened frame. The barrel is 3.5" long; the hammer is bobbed and does not protrude; the safety is ambidextrous. The finish is matte blue, with black plastic grips. The Model 469 was introduced in 1983 and discontinued in 1988.

475	425	350	300	250	200

Model 645

The Model 645 is a large-framed, stainless steel double-action pistol chambered for the .45 ACP cartridge. It has a 5" barrel, adjustable sights, and a detachable 8-shot magazine. It is offered with fixed or adjustable sights and an ambidextrous safety. The grips are molded black nylon. S&W manufactured this pistol between 1985 and 1988.

600	450	375	325	250	150

Model 745—IPSC

This model is similar in outward appearance to the Model 645 but is quite a different pistol. The Model 745 is a single-action semi-automatic chambered for the .45 ACP cartridge. The frame is made of stainless steel, and the slide of blued carbon steel. The barrel is 5", and the detachable magazine holds eight rounds. The sights are fully adjustable target types. The grips are checkered walnut. Introduced in 1986 and discontinued in 1990.

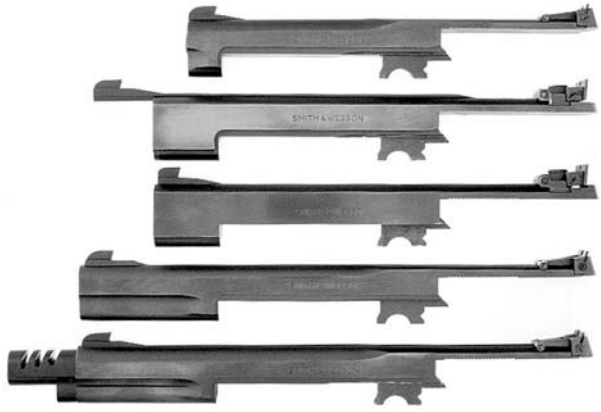
TARGET PISTOLS

Model 41

The Model 41 was introduced to the shooting public in 1957. It is a high quality .22 rimfire target pistol. It has a steel frame, steel slide, and either a 5.0", 5.5" or 7.375" barrel. It has a detachable 10-shot magazine, adjustable target sights, and checkered walnut target grips with thumb rest. The finish is blued. Weight with 5.5", barrel is about 41 oz. and for 7.375" barrel about 44 oz. Prices listed are for 5" lightweight barrel.

Other Barrel Options:
5.5" with extended sight add $100. 5.5" heavy with extended sight add $100. 7.375" with muzzlebrake add $75.



Model 41 barrel types Courtesy John J. Stimson, Jr.

NOTE: For full set of steel and aluminum barrel weights add up to $500 depending on condition. For .22 Short conversion kit add $750 depending on condition. For military marked pistols add 400 percent.

650	575	500	400	300	150

Model 41-1

This model was introduced in 1960 and is chambered for the .22 Short rimfire only. It was developed for the International Rapid Fire competition. In appearance it is quite similar to the Model 41 except that the slide is made of aluminum alloy, as well as the frame, in order to lighten it to function with the .22 Short cartridge. This model was not a commercial success like the Model 41, so it was discontinued after fewer than 1,000 were manufactured.

Model 41 Fiftieth Anniversary Edition

Similar to original Model 41 but machine-engraved with Class A+ coverage, gold plated borders, and glass-topped presentation case. Introduced 2008. Serial Number Range: FYA0001 - FYA0500.

NIB	Exc.	V.G.	Good	Fair	Poor
1400	—	—	—	—	—

Model 46

This was a lower-cost version of the Model 41. It was developed for the Air Force in 1959. Its appearance was essentially the same as the Model 41 with a 7" barrel. Later a 5" barrel was introduced, and finally in 1964 a heavy 5.5" barrel was produced. This economy target pistol never had the popularity that the more expensive Model 41 had, and it was discontinued in 1968 after approximately 4,000 pistols were manufactured.

700	600	450	350	250	200

Model 61 Escort

In 1970 the Model 61 was introduced as the only true pocket automatic that S&W produced. It was chambered for the .22 LR cartridge with a 2-1/2" barrel and 5-round magazine. It was offered in either blued or nickel finish with black checkered plastic grips. It was dropped from the product line in 1974.

Model 52 (.38 Master)

Introduced in 1961 as a target pistol chambered for the .38 Special mid-range wad cutter cartridge. It is similar in appearance to the Model 39 but is single-action-only by virtue of a set screw. Fitted with a 5" barrel and a 5-round magazine. It has a blued finish with checkered walnut grips. About 3,500 of these pistols were produced in this configuration until discontinued in 1963.

Model 3904

In 1989 S&W redesigned the entire line of 9mm semi-automatic handguns. The 3904 is chambered for the 9mm Parabellum and has an 8-shot detachable magazine and 4" barrel with a fixed bushing. The frame is alloy, and the trigger guard is squared for two-hand hold. The magazine well is beveled, and the grips are one-piece wrap-around made of delrin. The three-dot sighting system is employed. This model has been discontinued.

TSW SERIES (TACTICAL SMITH & WESSON)

This series is an upgrade of the older Smith & Wesson pistol series, many of which have been discontinued. These pistols come with either a traditional double-action trigger or a double-action-only trigger. All TSW pistols have an equipment rail for mounting lights or lasers. All are marked "TACTICAL S&W" on the slide.

3913/3953 TSW

Chambered for 9mm cartridge and fitted with a 3.5" barrel. White dot front sight and Novak Lo-Mount rear sight. Aluminum alloy frame. Magazine capacity is 7 rounds. Weight is about 25 oz. Stainless steel finish. The 3913 is traditional double-action while the 3953 is double-action-only.

NIB	Exc.	V.G.	Good	Fair	Poor
525	475	400	—	—	—

4013/4053 TSW

This pistol is chambered for the .40 S&W cartridge and fitted with a 3.5" barrel. White dot front sight and Novak Lo-Mount rear sight. Aluminum alloy frame and stainless steel slide. Magazine capacity is 9 rounds. Weight is about 27 oz. The 4013 is traditional double-action while the 4053 is double-action-only.

NIB	Exc.	V.G.	Good	Fair	Poor
525	475	400	—	—	—

4513/4553 TSW

This model is chambered for the .45 ACP cartridge and fitted with a 3.75" barrel. White dot front sight and Novak Lo-Mount rear sight. Aluminum alloy frame with stainless steel slide. Magazine capacity is 7 rounds. Weight is about 29 oz. The 4513 is traditional double-action while the 4553 is double-action-only.

NIB	Exc.	V.G.	Good	Fair	Poor
525	475	400	—	—	—

NOTE: The double-action-only model 4553 is $50 less.

5903/5906/5943/5946 TSW

These pistols are chambered for the 9mm cartridge and fitted with a 4" barrel. Fixed sights standard (5903, 5906, 5943, 5946) adjustable sights (5906) optional as well as night sights (5906). Offered in traditional double-action (5903, 5906) as well as double-action-only (5943, 5946). Magazine capacity is 10 rounds and weight is about 38 oz. Stainless steel finish.

NIB	Exc.	V.G.	Good	Fair	Poor
550	495	400	—	—	—

NOTE: Add $100 for night sights, add $50 for adjustable sights.

4003/4006/4043/4046 TSW

This model comes in the same configurations as the 5903 group except these pistols are chambered for the .40 S&W cartridge. Magazine capacity is 10 rounds. Weight is about 28 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
600	500	400	—	—	—

NOTE: Add $100 for night sights, add $50 for adjustable sights.

4563/4566/4583/4586 TSW

Similar to the above model but chambered for the .45 ACP cartridge and fitted with a 4.25" barrel. Same configurations as above. Weight is about 31 oz.

NIB	Exc.	V.G.	Good	Fair	Poor
600	500	450	—	—	—

NOTE: Add $100 for night sights, add $50 for adjustable sights.

CHIEF'S SPECIAL SERIES

CS9

Chambered for 9mm cartridge and fitted with a 3" barrel, this model has a stainless steel slide and aluminum alloy frame. Also available in blued finish. Hogue wraparound grips are standard. Fixed sights. Magazine capacity is 7 rounds. Weight is approximately 21 oz.

NIB	Exc.	V.G.	Good	Fair	Poor

SMITH & WESSON COMMEMORATIVES

Smith & Wesson has, over the years, built many special edition handguns. These guns have been to commemorate some im-

portant national or regional event or group. The company has also built a large number of special edition handguns for certain distributors such as Lew Horton which is listed. There are well over 200 special production guns not reflected in this pricing guide. Not even Smith & Wesson has all of the information on these guns and with many the number is so small that a market price would not be possible to establish. Listed are a number of Smith & Wesson Commemoratives that we do have information on. Due to the difficulty in determining value only the original retail price is listed. Remember to receive full value for these guns they must be NIB, unfired with unturned cylinders.

Model 14 Texas Ranger Comm.

Introduced in 1973. Supplied with 4" barrel and cased. Edition limited to 10,000. 8,000 of these had knives. Serial numbers TR 1 to TR 10000.

Original Retail Introductory Price: $250.00

Model 25-3 S&W 125th Anniversary Comm.

Introduced in 1977. Limited edition of 10,000. Serial numbers SW0000 to SW10000. Deluxe models marked 25-4.

SMITH & WESSON PERFORMANCE CENTER HANDGUNS

The role of Smith & Wesson's Performance Center has changed since it was established in 1990. What was once a specialized tune-up and competition one-off production department has now become a separate facility in providing specialized and limited handguns to the public often with distributors participation. This change came about around 1991, when the Performance Center initiated its own limited edition designs. These editions are generally limited to between 300 and 600 pistols for each model. The Performance Center, in fact, has its own distinct product line. Performance Center pistols are made in its own shop using its own designers. One of these distributors that has played a major role in offering these special guns to the public is the Lew Horton Distribution Company. The Center still continues to offer action jobs and accurate work but no longer executes one-of-a-kind customizing. The Performance Center has built about eight to twelve different models in the last two years. Plans call for more of these unique handguns to be built in the future. Pistols that are available from a certain distributor or the Performance Center will be noted in the description of each pistol.

Limited Edition Pistols and Revolvers of 1990

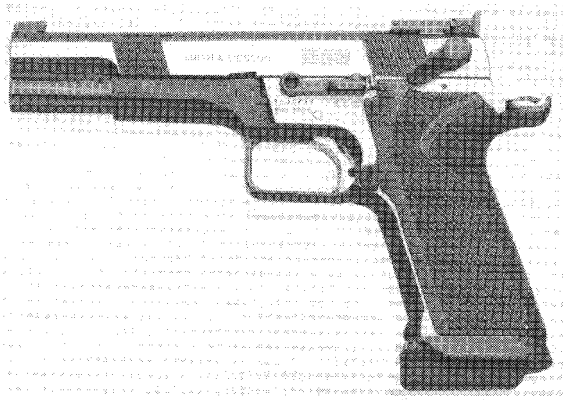
One of the first limited special series of Performance Center handguns was this offering, which consisted of custom engraved S&W handguns limited to 15 units on any current (1990) production pistol or revolver. This Limited Edition featured: 24 karat gold and sterling inlays, special bright mirror finish, decorated in light scroll pattern, specially assigned serial number beginning with the prefix "PEC," tuned action, solid walnut presentation case inlaid with blue or burgundy leather insert, embossed with gold with performance center logo. Interior of case is custom fitted with a matching colored velvet. Each handgun is hand numbered and has a signed certificate of authenticity. Because of the unique nature of the Limited Edition offering it is strongly recommended to secure a professional appraisal.

.40 S&W Tactical

A limited edition semi-automatic handgun offered exclusively by Lew Horton through the Performance Center. This special pistol is fitted with a 5" match-grade barrel, hand fit spherical barrel bushing, custom tuned action, special trigger job, over-

sized frame and slide rails, wrap-around straight backstrap grip. Replaceable front and Novak rear sights. Special serial numbers. Offered in 1992 and limited to 200 units.

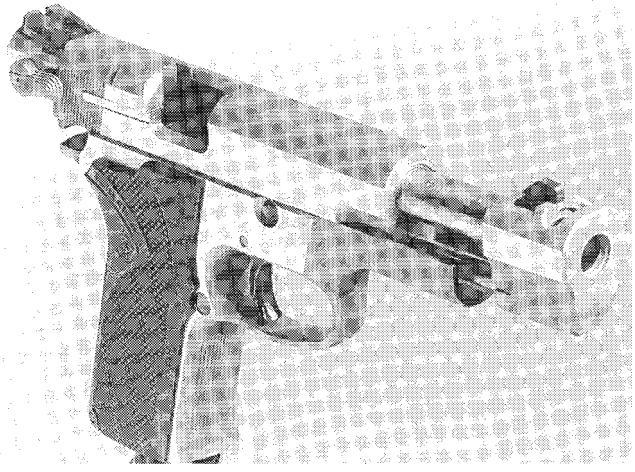
Courtesy Smith & Wesson



Suggested Retail Introductory Price: $1,500

.40 S&W Compensated

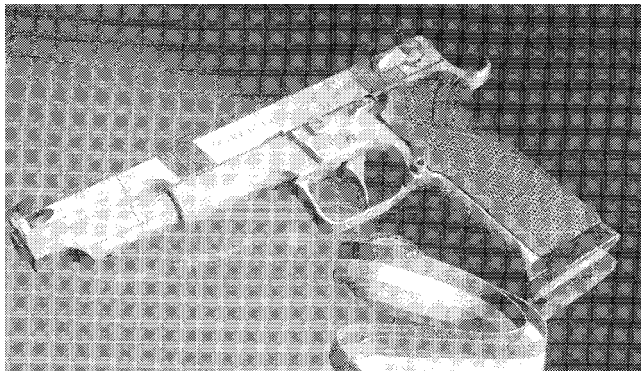
Similar to the .40 S&W Tactical but furnished with a 4.625" barrel and single chamber compensator. This is also a Lew Horton/Performance pistol. A production of 250 units. Offered in 1992.



Suggested Retail Introductory Price: $1,700

.40 S&W Performance Action Pistol

Offered in limited quantities in 1990, this Performance Center .40 S&W semi-automatic pistol was used by the Smith & Wesson shooting team. The frame and barrel are stainless steel with blued carbon steel slide, two port compensator, two fitted and numbered 13-round magazines, 5.25" match grade barrel extended frame beavertail, square combat trigger guard, oversize magazine release button, spherical barrel bushing, wrap-around straight backstrap grip, extended magazine funnel, and BoMar adjustable rear sight. The action is tuned for accuracy and precision.



Suggested Retail Introductory Price: N/A

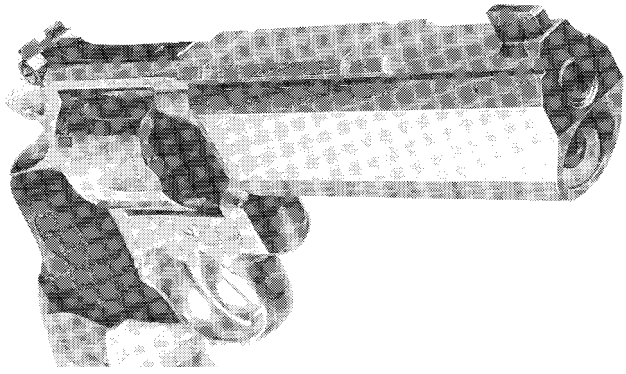
Model 681 Quadport

A Lew Horton revolver limited to 300 guns with special serial numbers. This 7-shot revolver has a 3" barrel underlug quadport barrel. The action is tuned, cylinders are chamfered and the trigger has an overtravel stop. Sights are fixed combat type.

Suggested Retail Introductory Price: $675

Model 686 Competitor

Introduced by Lew Horton and the Performance Center for 1993 this limited edition revolver features a match grade barrel and unique under barrel weight system. The action has been custom tuned and the receiver is drilled and tapped for scope mounts. Charge holes are chambered, ejector rod housing is enclosed, and the grip is an extended competition type. Special serial numbers.



Suggested Retail Introductory Price: $1,100

Model 686 Hunter

Similar to the Model 686 Competitor. This is also a limited edition Lew Horton revolver chambered for the .357 Magnum and features the under barrel weight system, internal scope mount, and custom tuned action. Special serial numbers.

Suggest Retail Introductory Price: $1,154

Model 686 Carry Comp 4"

Offered in limited quantities by Lew Horton and the Performance Center in 1992 this new design features the unique single chamber integral barrel compensator. Front is windage adjustable and the action is custom tuned. Chambered for the .357 Magnum cartridge. Special serial numbers.

Suggested Retail Introductory price: $1,000

Model 686 Carry Comp 3"

The 1993 Lew Horton limited edition version of the Model 686 Carry Comp 4" model with a 3" barrel. The same features apply to both models.

Suggested Retail Introductory Price: $1,000

Model 686 Plus

This Lew Horton model features a 7-round cylinder with chamfered charge holes for use with full moon clips for both .38 Special and .357 Magnum cartridges. Suggested Retail Price: $2,270

SMITH & WESSON LONG ARMS

.320 Revolving Rifle Model

This model is rare and unique—a prize to a S&W collector. The Revolving Rifle is chambered for the .320 S&W Revolving Rifle cartridge, has a 6-shot fluted cylinder and is offered with a 16", 18", and 20" barrel. Only 76 of the rifles are nickel-plated, and the remainder of the production is blued. The butt is rounded, with red hard rubber checkered grips and a forearm of the same material. There is a detachable shoulder stock with a black hard rubber buttplate featuring the S&W logo. The rifle was furnished in a leather carrying case with accessories. As fine a firearm as this was, it was a commercial failure for S&W; and they finally came to the realization that the public did not want a revolving rifle. They manufactured only 977 of them between 1879 and 1887.

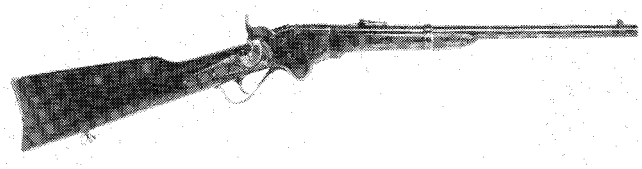
SPENCER

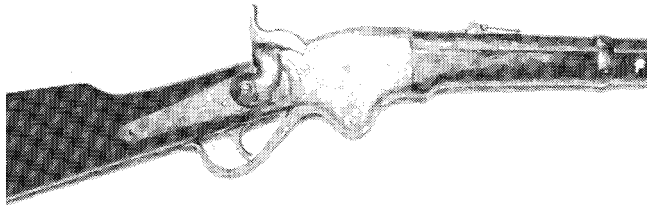
Boston, Massachusetts

Spencer Carbine

This was one of the most popular firearms used by Union forces during the Civil War. It is chambered for a metallic rimfire cartridge known as the "No. 56." It is actually a .52 caliber and was made with a copper case. The barrel is 22" in length. The finish is blued, with a carbine-length walnut stock held on by one barrel band. There is a sling swivel at the butt. There were approximately 50,000 manufactured between 1863 and 1865.



Courtesy Bonhams & Butterfields, San Francisco, California



Exc.	V.G.	Good	Fair	Poor
—	3700	2750	1750	500

Military Rifle—Navy Model

This model is similar to the carbine, with a 30" round barrel and a full-length walnut stock held on by three barrel bands. It features an iron forend tip and sling swivels. The Civil War production consisted of two models. A Navy model was manufactured between 1862 and 1864 (there were approximately 1,000 of these so marked).

Exc.	V.G.	Good	Fair	Poor
—	—	5000	2250	600

Military Rifle—Army Model

There were approximately 11,450 produced for the Army during the Civil War. They are similar to the Navy model except that the front sight doubles as a bayonet lug. They were manufactured in 1863 and 1864.

A Spencer Rifle with 24-3/4" barrel sold at auction for $67,500. Inscribed on the receiver to "Lt. Philip Reade, 2nd Lieut. 3rd U.S. Infantry." Condition is 85 percent blue with 30 percent case colors. Fitted with a tang sight as well as rear ladder sight.

Springfield Armory Post-war Alteration

After the conclusion of the Civil War, approximately 11,000 carbines were refurbished and rechambered for .50 caliber rimfire. The barrels were sleeved, and a device known as the "Stabler cut-off" was added to convert the arm to single-shot function. Often they were refinished and restocked. The inspector's marks "ESA" will be found in an oval cartouche on the left side of the stock. These alterations took place in 1867 and 1868.

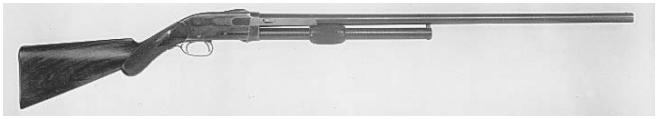
SPENCER ARMS CO.

Windsor, Connecticut

Slide-Action Shotgun

From 1882 to 1889 they manufactured the first successful slide action repeating shotgun. Designed by Christopher M. Spencer who also designed the Civil War era Spencer military carbines. The shotgun came in both solid and takedown models in both 12 and 10 gauge. In 1890 Francis Bannerman & Sons of New York bought the patents and machinery and moved the operation to Brooklyn, New York. They produced what is known as the Spencer Bannerman models from 1890 to 1907. The later Bannerman models are worth 50 percent less than the Spencer models.



Exc.	V.G.	Good	Fair	Poor
—	1000	600	200	125

NOTE: The takedown model is worth 20 percent premium and 10 gauge models are worth a 10 percent premium.

SPENCER REVOLVER

Maltby, Henley & Company
New York, New York

Safety Hammerless Revolver

A .32 caliber hammerless double-action revolver with a 3" barrel. The frame and barrel made of brass, the cylinder of steel and the grips are of walnut. The barrel is marked "Spencer Safety Hammerless Pat. Jan. 24, 1888 & Oct. 29, 1889." Manufactured by the Norwich Pistol Company circa 1890.

SPHINX

Sphinx Engineering SA
Porrentru, Switzerland
Imported by Sile Distributors Inc.

This Swiss-based company was founded in 1876 and produced the first automatic turning machine. The company made small drills, tungsten carbine tools, and tool coatings. After WWII Sphinx developed more exotic machines and drills. In 1990 Sphinx Engineering SA was established for the development and production of pistols. In 1991 the AT .380 was introduced to the market. The following year the AT 2000 was placed on the market. Sphinx purchased the rights to its current line of pistols from ITM AG, a Swiss firm that experienced financial problems with the development of its pistol line, in 1989. The AT series is essentially a copy of the famous Czech CZ 75 semi-automatic pistol.

AT-380

This semi-automatic pistol is a small .380 caliber in double-action-only. The magazine capacity is 11 rounds. It is offered in stainless steel, blued, or two-tone finish. The barrel is 3.27" and overall length is 6.03". Sights are fixed and grips are black checkered plastic. Weight is 25 oz.

AT-2000 SERIES PISTOLS

This is a series number applied to several different variations of the same basic design. Based on the CZ 75 pistol the AT-2000 is a semi-automatic pistol offered in 9mm and .40 S&W. Barrel lengths are different depending on variation, but the AT-2000 can be converted from double-action to double only in just a matter of minutes.

AT-2000S/SDA

This model is chambered for the 9mm or .40 S&W cartridge. The barrel length is 4.53" and overall length is 8.12". Magazine capacity is 15 rounds for 9mm and 13 rounds for .40 S&W. Available in double-action (S) or double-action-only (SDA). Offered with two-tone or all blued finish. Weighs 35 oz.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
875	675	600	500	400	300

AT-2000P/PDA

This is a slightly smaller of the AT-2000S. Magazine capacity is 13 rounds for 9mm and 11 rounds for .40 S&W. The features are the same except that the barrel length is 3.66", overall length 7.25", and weight is 31 oz.

SPITFIRE

JSL (Hereford) Ltd.
Hereford, England

This semi-automatic pistol is a design based on the CZ 75. This is a hand-built pistol designed by John Slough and built from a solid block of steel. The stainless steel frame and slide are cut with spark erosion and diamond grinding. Barrels are built and bored in the same factory. This is primarily a competition pistol.

Spitfire Standard Model (G1)

Chambered for the 9x21, 9mm Parabellum, or .40 S&W cartridges this pistol uses the locked breech concept. The trigger system is single and double-action and it is fitted with an ambidextrous safety. The barrel is 3.7" and the overall length is 7.1". Magazine capacity of the 9mm is 15 rounds. Sights are fixed. Empty weight is 35 oz. Finish is stainless steel. Comes supplied with presentation box, two magazines, and allen key.Discontinued.

SPRINGFIELD ARMORY

Springfield, Massachusetts

This was America's first federal armory. It began producing military weapons in 1795. The armory has supplied military weapons to the United States throughout its history.

NOTE: For additional Springfield Armory military firearms history, technical data, descriptions, photos, and prices see the *Standard Catalog of Military Firearms* under United States, Rifles.

Model 1841 Cadet Musket

This is a single-shot, muzzle-loading rifle chambered for .57 caliber percussion. It has a 40" round barrel with a full-length stock held on by three barrel bands. This rifle features no rear sight. It is browned and case-colored, with iron mountings. There is a steel ramrod mounted under the barrel. The lockplate is marked "Springfield" with the date of manufacture and "US" over an eagle motif. There were approximately 450 produced between 1844 and 1845.

Model 1842 Musket

This is a single-shot muzzleloader chambered for .69 caliber percussion. It has a 42" round barrel and a full-length stock held on by three barrel bands. The finish is white with iron mountings and a steel ramrod mounted beneath the barrel. There were a total of approximately 275,000 manufactured between 1844 and 1855 by both the Springfield Armory and the Harper's Ferry Armory. They are so marked.

—	—	3850	1250	500

Model 1851 Percussion Cadet Musket

This single-shot muzzleloader in .57 caliber with 40" round barrel is almost identical with the Model 1841 Cadet Musket, the

main difference and distinguishing feature is the use of the slightly smaller Model 1847 Musketoon lock. Markings are identical as shown for the Model 1841 Cadet Musket. These weapons were made at the Springfield Armory from 1851 to 1853, with total production of 4,000 guns.

—	—	25000	8500	2000

Model 1855 Rifle Musket

This is a single-shot muzzleloader chambered for .58 caliber percussion. It has a 40" round barrel with a full-length stock held on by three barrel bands. It has iron mountings and a ramrod mounted under the barrel. The front sight acts as a bayonet lug. The finish is white with a walnut stock. The lock is marked "U.S. Springfield." There was also a Harper's Ferry manufactured version that is so marked. There were approximately 59,000 manufactured between 1857 and 1861.

—	—	4500	1750	750

Model 1858 U.U.S. Cadet Rifle Musket

Similar to the Model 1855 Rifled Musket but with a 38" barrel and shorter stock. The buttstock is 1" shorter than the musket and the forearm is 2" shorter. About 2,500 were built.

Exc.	V.G.	Good	Fair	Poor
—	—	5000	2250	1000

Model 1861 Percussion Rifle Musket

The Model 1861 was the standard musket in use during the Civil War. This .58 caliber single-shot muzzleloader has a 40" barrel with three barrel bands and all iron mountings; all metal parts are finished bright (some rear sights are blued) and the stock is walnut. On the lock there is an eagle motif forward of the hammer, US/SPRINGFIELD, beneath the nipple bolster, and the date at the rear section of the lock. About 256,129 of these muskets were made at the Springfield Armory, while almost 750,000 more were made under contract.

Exc.	V.G.	Good	Fair	Poor
—	—	3500	1500	800

Model 1863 Rifle Musket, Type II, aka Model 1864

This was the last U.S. martial regulation arm of muzzleloading design, and it was widely used during the latter part of the Civil War. Produced at the Springfield Armory between 1864 and 1865, with total production of 25,540 pieces. This weapon is identical to the Type I with the exception of the dating of the lock, which is either 1864 or 1865, a single leaf rear sight, and solid barrel bands secured by flat springs mounted in the stock. The ramrod was either the tulip head type, or the new knurled and slotted design.

STENDA WAFFENFABRIK

Suhl, Germany

Pocket Pistol

A 7.65mm semi-automatic pistol similar to the "Beholla," the "Leonhardt," and the "Menta." Stenda took over the production of the Beholla pistol design at the close of WWI. The only major difference in the Stenda design was the elimination of the Beholla's worst feature, the pin that went through the slide and retained the barrel. It was replaced by a sliding catch that anchored it in place and unlocked the slide so that the barrel could be removed without the need of a vise and drift pin. The Stenda pistol can be identified by the fact that there are no holes through the slide and there is a catch on the frame above the trigger. The finish blued, with plastic grips; and the slide is marked "Waffenfabrik Stendawerke Suhl." Approximately 25,000 manufactured before production ceased in 1926.

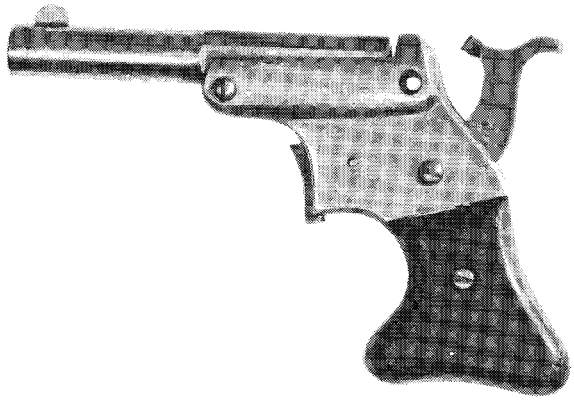
STEVENS ARMS CO., J.

Chicopee Falls, Massachusetts

In 1864 this firm began doing business as J. Stevens & Company. In 1888 it was incorporated as the J. Stevens Arms & Tool Company. It operated as such until 1920, when it was taken over by the Savage Arms Company. It has operated as an independent division in this organization since. This company produced a great many firearms—most that were of an affordable nature. They are widely collected, and one interested in them should take advantage of the literature available on the subject.

Vest Pocket Pistol

This is a single-shot pocket pistol chambered for the .22 and the .30 rimfire cartridges. The .22 caliber version is rarely encountered and would be worth approximately 25 percent more than the values illustrated. It has a 2.75" part-octagonal barrel that pivots upward for loading. It has an external hammer and a spur-type trigger. The frame is nickel-plated or blued, with a blued barrel. The odd shaped flared grips are made of rosewood. The first models were marked "Vest Pocket Pistol" only. Later models have the barrels marked "J. Stevens & Co. Chicopee Falls, Mass." There were approximately 1,000 manufactured between 1864 and 1876.



Courtesy Milwaukee Public Museum, Milwaukee, Wisconsin

Gem Pocket Pistol

This is a single-shot, derringer-type pocket pistol chambered for either the .22 or .30 rimfire cartridges. It has a 3" part-octagonal barrel that pivots to the side for loading. It has a nickel-plated brass frame with either a blued or plated barrel. It has bird's-head grips made of walnut or rosewood. The barrel is marked "Gem." The Stevens name or address does not appear on this firearm. There were approximately 4,000 manufactured between 1872 and 1890.

Stevens Tip Up Rifles

This series of rifles was produced by Stevens beginning in the 1870s through 1895. There are a number of variations, but they are all quite similar in appearance. They feature a distinctive sloped frame made of iron and nickel-plated. Most frames are similar in size, but there is a slightly lighter frame used on the "Ladies Model" rifles. These Tip Up rifles are chambered for various calibers from the .22 rimfire to the .44 centerfire cartridges. They are offered with barrel lengths of 24", 26", 28", or 30". The actions are nickel-plated, as well as the trigger guards and the buttplates. The barrels are blued, and the two-piece stocks are of walnut. They are offered with various buttplates and sights. A shotgun version is also offered. There are a number of variations that differ only slightly, and the model numbers are not marked on the rifles. We suggest securing a qualified appraisal if in doubt. The major variations and their values are as follows:

Ideal Single-Shot Rifle

This excellent rifle was manufactured by Stevens between 1896 and 1933. It is a single-shot, falling-block type action that is activated by a trigger guard-action lever. It was produced in many popular calibers from .22 rimfire up to .30-40. It was also manufactured in a number of special Stevens calibers. It was offered with various length barrels in many different grades, from plain Spartan starter rifles up to some extremely high-grade Schuetzen-type target rifles with all available options. In 1901 Harry Pope of Hartford, Connecticut, went to work for Stevens and brought his highly respected barrel to the Stevens Company. He remained an employee for only two years, and the firearms produced during this period have the name "Stevens-Pope" stamped on the top of the barrel in addition to the other factory markings. Rifles marked in this manner and authenticated would be worth an approximate 50 percent premium if they are in very good to excellent condition. Due to numerous variations and options offered, we strongly recommend securing a qualified appraisal, especially on the higher-grade Ideal series rifles, before a purchase.

No. 44

This version is chambered for various calibers and is offered with a 24" or 26" barrel. It has an open rear sight with a Rocky Mountain-type front sight. The finish is blued and case colored, with a walnut stock. There were approximately 100,000 manufactured between 1896 and 1933.

5500	4700	3700	2900	1800

No. 49

This model is also known as the "Walnut Hill Rifle." It is a high grade target rifle chambered for many calibers between the .22 rimfire and the .44-40. It is offered with a 28" or 30" part-octagonal barrel that is medium- or heavy-weight. It was furnished with a globe front sight and a vernier tang sight. It is blued with a case-colored frame and has a high-grade, checkered, varnished walnut stock that has a high comb and features a pistol grip, cheekpiece, Swiss-type buttplate, and a loop-type trigger guard lever that resembles that of a lever-action rifle. The receiver is engraved, and there were a number of options available that would increase the value when present. We recommend an appraisal when in doubt. This rifle was manufactured between 1896 and 1916.

Beginning in 1869 the Stevens Company produced a series of single-shot, break-open target and sporting pistols that pivot upward for loading. They are chambered for the .22 and the .25 rimfire cartridges, as well as various centerfire cartridges from the .32 Short Colt to the .44 Russian. These pistols were made with various barrel lengths and have either a spur trigger or conventional trigger with a guard. They are all single-actions with exposed hammers. The finishes are nickel-plated frames with blued barrels and walnut grips. These variations and their values are listed.

Six-inch Pocket Rifle

This version is chambered for the .22 rimfire cartridge and has a 6" part-octagonal barrel with open sights. The barrel is marked "J. Stevens & Co. Chicopee Falls, Mass." There were approximately 1,000 manufactured between 1869 and 1886.

No. 35

This version is chambered for the .22 rimfire, the .22 Stevens-Pope, and the .25 Stevens cartridges. It is offered with a 6", 8", 10", or 12.25" part-octagonal barrel. The firing pin has no bushing. It features an iron frame that is either blued or plated with a blued barrel. It has plain walnut grips with a weighted buttcap. It featured open sights. There were approximately 43,000 manufactured between 1923 and 1942.

STEVENS NO. 35 OFF-HAND SHOT GUN NFA, CURIO OR RELIC

Stevens No. 35 Auto-Shot

The Stevens No. 35 is a .410 bore pistol manufactured by the J. Stevens Arms Co., Chicopee Falls, Massachusetts. It was available with an 8" or 12.25" smoothbore barrel, for 2.5" shells only, in two variations: the **Off-Hand Shot Gun** (1923 to 1929) and the **Auto-Shot** (1929 to 1934). Total production is unknown because the .410 and .22 rimfire variations of the No. 35 share the same serial number range. Researcher Ken Cope estimates total Auto-Shot production was approximately 2,000, and Off-Hand production at 20,000 to 25,000. Production was halted after the government ruled the .410 Stevens to be a "firearm" in the "any other weapon" category under the NFA in 1934, when its retail price was about $12. The Stevens does

not possess the same collector appeal as other .410 smoothbore pistols, because (1) its relatively light weight makes it an uncomfortable shooter, and (2) the gun is not well made.

Off-Hand Shot Gun

Serial range from 1 to 43357.

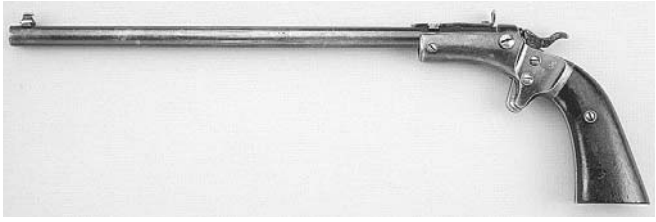
Auto-Shot

Exc.	V.G.	Good	Fair	Poor
450	300	200	125	100

NOTE: 8" barrel commands a 25 to 50 percent premium.

No. 43

This version is also called the Diamond and was produced in two distinct variations called the First Issue and the Second Issue. The First Issue has a brass frame; and the Second Issue, an iron frame and no firing pin bushing. Otherwise they are quite similar and would be valued the same. They are chambered for the .22 rimfire cartridge and are offered with either a 6" or 10" part-octagonal barrel. The frames are either nickel-plated or blued with blued barrels and square-butt walnut grips. There were approximately 95,000 manufactured between 1886 and 1916.



Paul Goodwin photo

Exc.	V.G.	Good	Fair	Poor
400	300	250	150	75

NOTE: Add a 25 percent premium for 10" barrels.

No. 10 Target Pistol

This version was a departure from its predecessors. It very much resembles a semi-automatic pistol but is, in reality, a single-shot. It is chambered for the .22 rimfire cartridge and has an 8" round barrel that pivots upward for loading. It has a steel frame and is blued, with checkered rubber grips. Instead of the usual exposed hammer, this version has a knurled cocking piece that extends through the rear of the frame. There were approximately 7,000 manufactured between 1919 and 1933.

POCKET RIFLES

This series of pistols is similar to the target and sporting pistols except that these were produced with detachable shoulder stocks that bear the same serial number as the pistol with which they were sold. They are sometimes referred to as Bicycle rifles. The collector interest in these weapons is quite high; but it would behoove one to be familiar with the provisions of the Gun Control Act of 1968 when dealing in or collecting this variation—as when the stock is attached, they can fall into the category of a short-barreled rifle. Some are considered to be curios and relics, and others have been totally declassified; but some models may still be restricted. We strongly recommend securing a qualified, individual appraisal on these highly collectible firearms if a transaction is contemplated.

NOTE: The values supplied include the matching shoulder stock. If the stock number does not match the pistol, the values would be approximately 25 percent less; and with no stock at all, 50 percent should be deducted.

Old Model Pocket Rifle

This version is chambered for the .22 rimfire cartridge and has an 8" or 10" part-octagonal barrel. It has a spur trigger and an external hammer on which the firing pin is mounted. The extractor is spring-loaded. It has a plated brass frame, blued barrel, and either walnut or rosewood grips. The shoulder stock is either nickel-plated or black. The barrel is marked "J. Stevens & Co. Chicopee Falls, Mass." There were approximately 4,000 manufactured between 1869 and 1886.

Exc.	V.G.	Good	Fair	Poor
900	700	550	325	200

Reliable Pocket Rifle

This version is chambered for the .22 rimfire cartridge and in appearance is quite similar to the Old Model. The basic difference is that the extractor operates as a part of the pivoting barrel mechanism instead of being spring-loaded. The barrel is marked "J. Stevens A&T Co." There were approximately 4,000 manufactured between 1886 and 1896.

Exc.	V.G.	Good	Fair	Poor
800	625	500	400	300

No. 42 Reliable Pocket Rifle

This version is similar to the first issue Reliable except that it has an iron frame with the firing pin mounted in it without a bushing. The shoulder stock is shaped differently. There were approximately 8,000 manufactured between 1896 and 1916.

First Issue New Model Pocket Rifle

This version is the first of the medium-frame models with a frame width of 1". All of its predecessors have a 5/8" wide frame. This model is chambered for the .22 and .32 rimfire cartridges and is offered with barrel lengths of 10", 12", 15", or 18" that are part-octagonal in configuration. The external hammer has the firing pin mounted on it. It has a plated brass frame, blued barrel, and either walnut or rosewood grips. The shoulder stock is nickel-plated and fitted differently than the small-frame models in that there is a dovetail in the butt and the top leg is secured by a knurled screw. The barrel is marked "J. Stevens & Co. Chicopee Falls, Mass." There were approximately 8,000 manufactured between 1872 and 1875.

No. 34 (Hunter's Pet)

This is the first of the heavy-frame pocket rifles that featured a 1.25" wide frame. This version is also known as the "Hunter's Pet." It is chambered for many popular cartridges from the .22 rimfire to the .44-40 centerfire. It is offered with a part-octagonal 18", 20", 22", or 24" barrel. It has a nickel-plated iron frame and blued barrel. The detachable stock is nickel-plated, and the grips are walnut. There were few produced with a brass frame; and if located, these would be worth twice the value indicated. The firing pin is mounted in the frame with the bushing, and it features a spur trigger. There were approximately 4,000 manufactured between 1872 and 1900.

STEVENS SINGLE-SHOT SHOTGUNS

This company manufactured a number of single barrel, break-open, single-shot shotguns. They were produced chambered for various gauges with various-length barrels and chokes. They are quite similar in appearance and were designed as inexpensive, utility-grade weapons. There is little or no collector interest in them at this time, and their values are similar. They are listed for reference purposes only.

STEVENS DOUBLE-BARREL SHOTGUNS

The firm of J. Stevens and its successors produced a number of utility-grade, side-by-side double-barrel shotguns between 1877 and 1988. They are chambered for 10, 12, 16, or 20 gauge as well as the .410 bore. Stevens shotguns in 10 gauge and .410 bore will normally bring a premium as do guns with single triggers and ejectors. They have various length barrels and choke combinations. They feature double triggers and extractors except where noted. A complete list of Stevens brand models including the three in-house brands: Riverside, Springfield, and Super Value, are listed.

STEVENS/SAVAGE SHOTGUNS

Model 411 Upland Sporter

Introduced in 2003 this side-by-side shotgun is chambered for the 12 or 20 gauge, as well as the .410 bore. The 12 gauge is fitted with 28" barrels, while the 28 and .410 have 26" barrels. Single trigger with ejectors. False sideplates are laser engraved. European walnut stock with pistol grip and splinter forend. Weight is about 6.75 to 6.5 lbs. depending on gauge.

NIB	Exc.	V.G.	Good	Fair	Poor
395	325	—	—	—	—

NOTE: Add $35 for 20 and .410 models.

STEVENS DATE CODE

Collectors will find a date code stamped on every double-barrel shotgun in the Stevens brands produced between March 1949 and December 1968. Usually, it is behind the hinge pin or ahead of the trigger guard on the bottom of the frame. It will appear as a small circle containing a number and letter. The letters correspond to the years shown in the following table. Significance of the numbers is not known.

NOTE: Add $150 for bayonet.

Model 124

This is a manually-operated bolt action shotgun chambered for 12 gauge. It has a 28" barrel with various chokes, is blued, and has a brown plastic Tenite stock. Ann odd duck: it looks like a semi-auto and is often mistaken for such.

Exc.	V.G.	Good	Fair	Poor
225	175	75	65	50

Model 67

This is a slide-action shotgun chambered for 12 and 20 gauge, as well as .410. It has 3" chambers. It is offered with various length barrels and choke tubes with a 5-shot tube magazine. It features a steel receiver and is blued, with a walnut stock. It was discontinued in 1989.

Exc.	V.G.	Good	Fair	Poor
250	175	150	100	75

Model 675

This is a slide-action shotgun chambered for 12 gauge with a 24" vent rib barrel with iron sights. The finish is blued, with a hardwood stock and recoil pad. It was manufactured in 1987 and 1988.

STEYR

Steyr, Austria

STEYR & MANNLICHER PISTOLS

Text by Joseph Schroeder

Not all Mannlicher pistols were made by Steyr, and many of the pistols made by Steyr were not designed by Mannlicher. However, since by far the greatest number of Mannlicher's pistols were made by Steyr we believe it will be appropriate to include all of Ferdinand Ritter von Mannlicher's pistols along with other Steyr designs under this heading.

Schoenberger

Considered by many to be the first "commercial" semi-automatic pistol even though apparently at the most only about two dozen were made in 1892. The Steyr-made 8mm Schoenberger was based on patents granted to Laumann in 1890-91 and had a magazine in front of the trigger guard.

Exc.	V.G.	Good	Fair	Poor
Too Rare to Price				

Mannlicher Model 1894

Mannlicher's first "successful" self-loading pistol, the Model 1894 had a blow-forward action and double-action lockwork. Earliest examples were made in Austria, probably by Steyr, in 7.6mm but the greatest number were made by SIG in 1896-97 for Swiss army tests. These 100 pistols had a shorter barrel and smaller frame and were in 6.5mm. Prices are for Swiss examples.

Courtesy Rock Island Auction Company

Exc.	V.G.	Good	Fair	Poor
13200	9900	6600	5500	3000

NOTE: Add 20 percent for 7.6mm pistols.

Mannlicher Model 1896/03

This is one of the most confusing of Mannlicher's pistols. Earliest examples, which have a fixed magazine and ribbed barrel, may have been made by Steyr and are very rare. Later versions, with a removable box magazine, have been called "Model 1896/03" and "Model 1901," and were made as both a pistol and pistol-carbine, possibly in Switzerland. Chambered for the 7.65mm Mannlicher cartridge, which is really a 7.65mm Borchardt. Prices listed are for the standard later model pistol or pistol-carbine (12" barrel, tangent sight); double prices for early pistol or late model pistol with detachable holster stock.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
8250	5500	3850	2750	1500

Mannlicher Model 1899

Earliest version of Mannlicher's final semi-automatic pistol design, only about 250 were made by Dreyse in Soemmerda, Germany. Chambered for a tapered case 7.63mm Mannlicher cartridge. Distinguished by the large safety lever on the left side, takedown screw under the barrel, and the Dreyse markings.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
9400	7150	4950	3850	2000

Mannlicher Model 1901

Marked "WAFFENFABRIK Steyr" on the left side and "SYSTEM MANNLICHER" on the right, the Model 1901 is distinguished by its checkered grips, rear sight located on the rear of the barrel, 8-round fixed magazine, and serial numbers to a little over 1000.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
3300	2450	1750	900	700

Mannlicher Model 1905

Improved version of the Model 1901, with longer grip holding 10 rounds, grooved wooden grips, rear sight on rear of breechblock, and "MODEL 1905" added to right side. Later production moved all markings to the left side so Argentine crest could be placed on right side. Prices listed are for an original commercial Model 1905, NOT a reblued Argentine contract with the crest ground off. Subtract 60 percent for reworked examples.

2750	2250	1650	900	500

Roth Steyr Model 1907

Based on the patents granted to Karel Krnka and Georg Roth, the 8mm Model 1907 had a rotating barrel locking system and was the first self-loading pistol adopted by the Austro-Hungarian Army.

Courtesy Joseph Schroeder

Exc.	V.G.	Good	Fair	Poor
1150	750	600	350	250

NOTE: Add 20 percent for early Steyr examples without a large pin visible on right side of frame, or for those made in Budapest instead of Steyr.

Steyr Model 1908 Pocket Pistol

Based on the Belgian patents of Nicholas Pieper, these .25 and .32 caliber pocket pistols featured tipping barrels were built by Steyr under license from Pieper in Liege. Production was suspended during WWI but may have resumed after the war ended. Prices are for either caliber.

NOTE: For military versions of this model see the *Standard Catalog of Military Firearms.*

Steyr Model SP

Steyr's first post WWII pistol, the Model SP was a beautifully made .32 ACP which, being double-action-only and more expensive than most of its contemporaries, was not competitive and was discontinued in the early 1960s after fewer than 1,000 were made. Slide marked "STEYR-DAIMLER-PUCH A.G. MOD.SP KAL. 7.65mm."

950	825	550	385	200

Steyr Model GB

The GB was introduced in the mid-1970s as a 9mm Parabellum military pistol, large in size but with an 18-round magazine capacity. Other features included polygon rifling and a gas trap around the barrel to delay breech opening. Initially produced

as the Rogak P-18 by L.E.S. of Morton Grove, Illinois, but discontinued due in part to quality control problems after just over 2,000 were made. Later production by Steyr as the GB was to much higher standards, but the GB never achieved much popularity and was discontinued in 1988.

THE FOLLOWING STEYR/MANNLICHER GUNS WERE IMPORTED BY GSI INC. TRUSSVILLE, ALABAMA

NOTE: Currently GSI Inc. is no longer receiving shipments of Steyr/Mannlicher rifles or handguns, nor does GSI, Inc. anticipate futher deliveries. At the present time Steyr/Mannlicher rifles are imported by Dynamit Nobel. The present owner is Cura Investholding GmbH.

SPORTER SERIES

This series includes rifles that are lightweight and have a reduced overall length. All Sporter models have an interchangeable 5-round rotary magazine. The stock is oil-finished walnut in either the Mannlicher full stock design or the half stock version. In both stock configurations an oval European cheekpiece is standard. These rifles are offered in four different action lengths: **SL** (super light), **L** (light), **M** (medium), or **S** (magnum). They are also available with either single trigger or double set triggers.

Model M72 L/M

A .243, .270, 7x57mm, 7x64mm, .308 or .30-06 caliber bolt-action rifle with a 23" fluted barrel, and single or double set triggers. Blued, checkered walnut stock. Manufactured from 1972 to 1980.

Exc.	V.G.	Good	Fair	Poor
1325	1025	750	550	450

Model SL

This model features the super light action and is offered with 20" barrel in full stock version or 23-1/6" barrel in half stock version. A rubber buttpad is standard. This model does not have a forend tip on its half stock variation. Offered in the following calibers: .222 Rem., .222 Rem. Mag., .223, and 5.6x50 Mag. Weighs approximately 6.2 lbs. with full stock and 6.3 lbs. with half stock.

NIB	Exc.	V.G.	Good	Fair	Poor

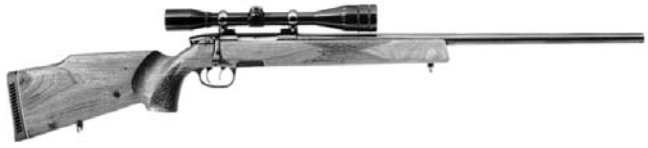
Model SL Carbine

As above, with a 20" fluted barrel and Mannlicher-style stock.

NIB	Exc.	V.G.	Good	Fair	Poor
1950	1750	1050	800	550	350

Varmint Model

This model features a heavy 26" barrel chambered for the .222 Rem., .223, 5.6x57, .243 Win., .308 Win., and .22-250. The forend of the stock is ventilated. The grip is enlarged and textured. Choice of single or double set triggers. Recoil pad is standard. Weighs about 8 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
1950	1750	1050	800	550	350

Model L

This rifle has the light action and is offered in the same stock configuration and barrel lengths as the Model SL. The calibers

are: 5.6x57, .243 Win., .308, .22-250, and 6mm Rem. Weighs about 6.3 lbs. with full stock and 6.4 lbs. with half stock.

NIB	Exc.	V.G.	Good	Fair	Poor
1850	1650	1000	750	500	300

Luxus Series

This luxury model offers a choice of full or half stock variations in select walnut with fine line checkering. The pistol grip is steeply angled. The Luxus rifles are fitted with a swept back European cheekpiece. A single set trigger is standard. The box magazine holds 3 rounds. Optional engraving and stock carving may be encountered on these modes that will dramatically affect price. The Luxus rifles are available with light, medium, or magnum length actions.

Luxus Model L

Same dimensions and barrel lengths as the Sporter version. The calibers are: 5.6x57, .243 Win., .308, .22-250, and 6mm Rem.

NIB	Exc.	V.G.	Good	Fair	Poor
2400	2000	1100	800	600	350

Luxus Model M

Same dimensions and barrel lengths as the Sporter Model M. Available in these calibers: 6.5x57, .270 Win., 7x64, .30-06, 9.3x 626.5x55, 7.5 Swiss, 7x57, and 8x57JS.

NIB	Exc.	V.G.	Good	Fair	Poor
2400	2000	1100	800	600	350

STURDIVANT, LEWIS G.

Talladega, Alabama

Received contract from the state of Alabama for 2,000 "Mississippi" or "Enfield" rifles. Two hundred and eighty were received on this contract. These arms resemble U.S. Model 1841 Rifles without patchboxes. Overall length 48-1/2"; barrel length 33"; .577 caliber. Unmarked.

STURM, RUGER & CO.

Southport, Connecticut

In 1946 William B. Ruger applied for his first patent on a blowback operated, semi-automatic, .22 caliber pistol. In 1949 Bill Ruger and Alexander Sturm released this pistol for sale, and the Ruger dynasty began. This pistol was as perfect for the American marketplace as could be. It was accurate, reliable, and inexpensive and ensured the new company's success. In 1951 Alexander Sturm passed away, but Mr. Ruger continued forward. At this time the fledgling television industry was popularizing the early American West, and Colt had not reintroduced the Single-Action Army after WWII. Ruger decided that a Western-style six shooter would be a successful venture, and the Single Six was born. This was not a Colt copy but a new design based on the Western look. Again Ruger scored in the marketplace, and this has been pretty much the rule ever since. With few exceptions this company has shown itself to be accurate in gauging what the gun-buying public wants. They have expanded their line to include double-action revolvers, single-shots, semi-auto and bolt-action rifles, percussion revolvers, and even a semi-automatic wonder nine. They have stayed ahead of the legal profession as much as possible by introducing safety devices and comprehensive instruction manuals and generally insured their future success. For such a relatively new company, collector interest in certain models is quite keen. There are a number of factors that govern Ruger collector values. All models made in 1976 were designated "200th Year of Liberty" models and if in NIB condition will bring up to a 25 percent premium if a market is found. The newer models that have a safety warning stamped on the barrel are generally purchased only by shooters and have no collector appeal whatsoever. The astute individual must be aware of these nuances when dealing in Rugers. There are some excellent works written on the Ruger (not as many as there are on the Colt or the Smith & Wesson), and the new collector can educate himself if he so desires. We list this company's models in chronological order.

NOTE: William B. Ruger died in 2002 at the age of 86.

SEMI-AUTOMATIC RIMFIRE PISTOLS

Standard Model "Red Eagle Grips"

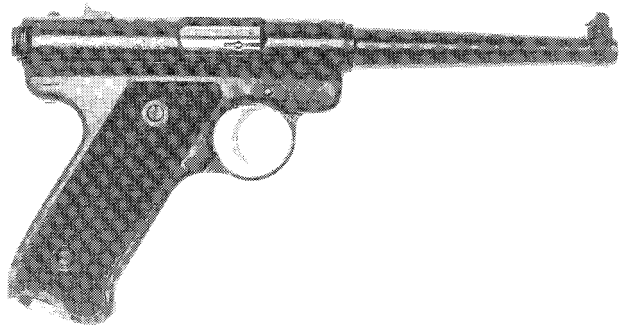
This is a blowback semi-automatic with a fixed, exposed, 4.75" barrel. The receiver is tubular, with a round bolt. There is a 9-shot detachable magazine, and the sights are fixed. The finish is blued, and the black hard rubber grips on this first model feature a red Ruger eagle or hawk medallion on the left side. There were approximately 25,600 manufactured before Alexander Sturm's death in 1951, but this model may be seen as high as the 35000 serial number range. Because variations of this model exist an expert opinion should be sought before a final price is established.

NIB	Exc.	V.G.	Good	Fair	Poor
750	550	450	325	250	150

NOTE: Factory verified plated pistols will bring between $2,500 and $5,000 depending on condition. For pistols in factory original wood "cod box" shipping carton add $2,000.

Standard Model

This model is identical to the Red Eagle except that after Sturm's death the grip medallions were changed from red to black and have remained so ever since. This pistol was produced from 1952-1982 in 4-3/4" and 6" barrels. There are a great many variations of this pistol, but a book dealing with this pistol alone should be consulted as the differences in variations are subtle and valuation of these variations is definitely a matter for individual appraisal.



Exc.	V.G.	Good	Fair	Poor
350	275	125	100	85

Standard Model—Marked "Hecho en Mexico"

These pistols were assembled and sold in Mexico. Approximately 200 were built with 4-3/4" barrels and about 50 were produced with 6" barrels. Only a few of these pistols have been accounted for and for this reason an expert should be consulted.

Exc.	V.G.	Good	Fair	Poor
1500	1200	850	600	400

Mark I Target Model

The success of the Ruger Standard Model led quite naturally to a demand for a more accurate target model. In 1951 a pistol that utilized the same frame and receiver with a 6-7/8", target-type barrel and adjustable sights was introduced. Early target models number 15000 to 16999 and 25000 to 25300 have Red Eagle grips. In 1952 a 5-1/4" tapered barrel model was introduced, but was soon discontinued. In 1963 the popular 5-1/2" bull barrel model was introduced. These models enjoyed well deserved success and were manufactured from 1951-1982.

Red Eagle

6-7/8" barrel.

Stainless Steel 1 of 5,000

This model is a special commemorative version of the first standard with the "Red Eagle" grips. It is made of stainless steel and is rollmarked with Bill Ruger's signature on it. The pistol is encased in a wood "salt cod" case.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
395	350	300	225	175	125

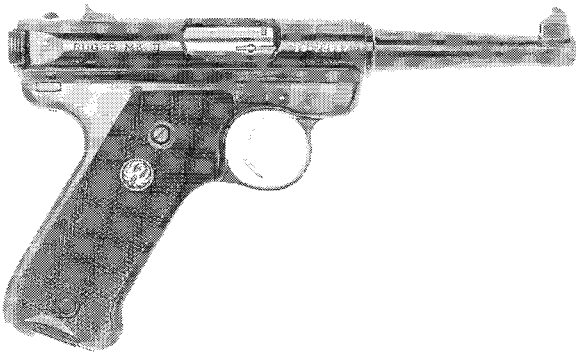
MARK II .22 CALIBER PISTOL SPECIFICATIONS

Supplied in .22 LR with various barrel weights and lengths. Magazine capacity is 10 rounds. Trigger is grooved with curved finger surface. High speed hammer provides fast lock time. Grips are sharply checkered and made of black gloss delrin material. Stainless steel models have a brushed satin finish. Today, each model except the MK-10 and KMK-10, come from the factory with a lockable plastic case and Ruger lock.

NOTE: In 2004 all Ruger adjustable sight .22 pistols are drilled and tapped for an included Weaver-type scope base adapter.

Mark II Standard Model

This is a generally improved version of the first Ruger pistol. There is a hold-open device, and the magazine holds 10 rounds. This model was introduced in 1982.



Standard Mark II Model MK4

Blued finish with 4.75" barrel. Checkered composition grips. Weight about 35 oz.

OLD MODEL SINGLE-ACTION REVOLVERS

Single Six Revolver

This is a .22 rimfire, 6-shot, single-action revolver. It was first offered with a 5-1/2" barrel length and a fixed sight. In 1959 additional barrel lengths were offered for this model in 4-5/8", 6-1/2", and 9-1/2". It is based in appearance on the Colt Single-Action Army, but internally it is a new design that features coil springs instead of the old-style, flat leaf springs. It also features a floating firing pin and is generally a stronger action than what was previously available. The early model had a flat loading gate and was made this way from 1953-1957, when the contoured gate became standard. Early models had checkered hard rubber grips changed to smooth varnished walnut by 1962. Black eagle grip medallions were used from the beginning of production to 1971 when a silver eagle grip medallion replaced it. No "Red Eagle" single-sixes were ever produced. This model was manufactured from 1953-1972.

Flat Gate Model

60,000 produced.

NOTE: Be aware that revolvers serial numbered under 2000 will bring a premium of 25 percent to 125 percent depending on condition, low serial number, and color of cylinder frame—bright reddish purple the most desirable.

NIB	Exc.	V.G.	Good	Fair	Poor
700	500	450	225	150	125

Contoured Gate Model

Introduced 1957. There were 258 5-1/2" barrel factory engraved pistols in this model. Add a 25 percent for 3-screw models.

Exc.	V.G.	Good	Fair	Poor
400	300	200	150	125

NOTE: Be aware that 4-5/8" and 9-1/2" barrel lengths will bring a premium. Add $3,500 to $6,000 for factory engraved and cased models.

Single Six Convertible

This model is similar to the Single Six but is furnished with an extra .22 rimfire Magnum cylinder.

Exc.	V.G.	Good	Fair	Poor
400	300	200	150	125

NOTE: Barrel lengths in 4-5/8" and 9-1/2" will bring a premium.

Single Six .22 Magnum Model

This model is similar to the Single Six except that it is chambered for the .22 rimfire Magnum and the frame was so marked. It was offered in the 6.5" barrel length only and was manufactured for three years. An extra long rifle cylinder was added later in production. The serial numbers are in the 300000-340000 range.

Exc.	V.G.	Good	Fair	Poor
400	300	250	200	175

Lightweight Single Six

This model is similar to the Single Six, with an aluminum alloy frame and 4-5/8" barrel. This variation was produced between 1956 and 1958 and was in the 200000-212000 serial number range. Approximately the first 6,500 were produced with alloy cylinders with steel chamber inserts.

NOTE: Stamped after the serial number or on the bottom of the frame. Varieties of "S" marked lightweights exist. Individual evaluation and appraisal is recommended. These are factory seconds and are verifiable.

Bearcat (Old Model)

This is a scaled-down version of the single-action. It is chambered for .22 rimfire and has a 4" barrel and an unfluted, roll engraved cylinder. The frame is alloy, and it has a brass colored anodized alloy trigger guard. The finish is blue, and the grips are plastic impregnated wood until 1963, thereafter walnut with eagle medallions were used. This model was manufactured from 1958-1970.

REMINDER

An "N/A" or "—" instead of a price indicates that there is no known price available for that gun in that condition, or the sales for that particular model are so few that a reliable price cannot be given.

Flattop—.357 Magnum

The success of the Single Six led to the production of a larger version chambered for the .357 Magnum cartridge. This model

is a single-action, with a 6-shot fluted cylinder and a flat top strap with adjustable "Micro sight." The barrel length is 4-5/8", 6.5", and 10". The finish is blue with checkered hard rubber grips on the early examples and smooth walnut on later ones. There were approximately 42,600 manufactured between 1955 and 1962.

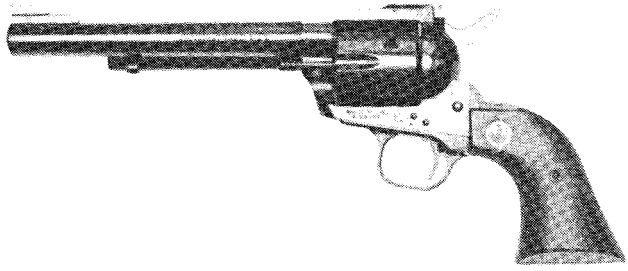
Blackhawk

This model is similar to the "Flattop," but the rear sight is protected by two raised protrusions—one on each side. It was available chambered for the .30 Carbine, .357 Magnum, .41 Magnum, or the .45 Colt cartridge. Barrel lengths are 4-5/8" or 6.5" in .357 Magnum and .41 Magnum. .45 Colt version has 4-5/8" and 7.5" barrel lengths. The .30 Carbine is furnished with a 7.5" barrel only. The finish is blue, and the grips are walnut with Ruger medallions. This model was produced from 1962 to 1972. Note that the "Old Style" Blackhawk (i.e., pre-transfer bar) is a popular platform for custom revolvers, so prices may exceed those shown depending on circumstances.



Courtesy *Know Your Ruger Single-Action Revolvers 1953-63*.
Blacksmith Corp.

NIB	Exc.	V.G.	Good	Fair	Poor
700	500	350	200	150	125

NOTE: Add 20 percent for .41 Mag. and 50 percent for .45 Colt and 35 percent for .30 Carbine. Original verified factory brass grip frame will add at least $200 to above prices. It was available chambered for the .357 Magnum or .41 Magnum (4-5/8" or 6-1/2" barrel), or .45 Long Colt (4-5/8" or 7-1/2" barrel). The .41 Magnum with factory installed brass frame will bring $800 to $1500 depending on condition.

Blackhawk Convertible

This model is the same as the Blackhawk with an extra cylinder to change or convert calibers. The .357 Magnum has a 9mm cylinder, and the .45 Colt has a .45 ACP cylinder.

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

.45 L.C./.45 ACP

NIB	Exc.	V.G.	Good	Fair	Poor
500	300	200	—	—	—

NOTE: The 4-5/8" barrel will bring a slight premium. Nonprefix serial numbered .357/9mm Blackhawks will bring a premium.

Super Blackhawk Old Model

The formidable recoil of the .44 Magnum cartridge was difficult to handle in a revolver with a small grip such as found on the Blackhawk, so it was decided to produce a larger-framed revolver with increased size in the grip. The rear of the trigger guard was squared off, and the cylinder was left unfluted to increase mass. This model was offered with a 7.5" barrel; 600 6.5" barrel Super Blackhawks were produced by factory error. This model is blued and has smooth walnut grips with medallions. The first of these revolvers were offered in a fitted wood case and are rare today. The Super Blackhawk was made from 1959-1972.

NOTE: For pistols with verified factory installed brass grip frame each example should be appraised.

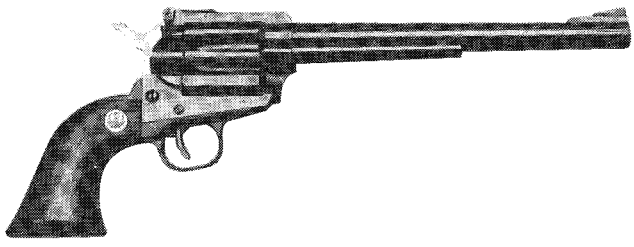
Hawkeye Single-Shot

The shooting public wanted a small-caliber, high-velocity handgun. The Smith & Wesson Model 53, chambered for the .22 Jet, appeared in 1961; and the cartridge created extraction problems for a revolver. Ruger solved the problem with the introduction of the Hawkeye—a single-shot that looked like a six shooter. In place of the cylinder was a breech block that cammed to the side for loading. This pistol was excellent from an engineering and performance standpoint but was not a commercial success. The Hawkeye is chambered for the .256 Magnum, a bottleneck cartridge, and has an 8.5" barrel and adjustable sights. The finish is blued with walnut, medallion grips. The barrel is tapped at the factory for a 1" scope base. This pistol is quite rare as only 3,300 were produced in 1963 and 1964.



Courtesy John C. Dougan

NIB	Exc.	V.G.	Good	Fair	Poor
2500	1900	1400	850	600	500

Editor's Comment: All of the above single-action Ruger pistols fitted with factory optional grips will bring a premium regardless of model. This premium applies to pistols

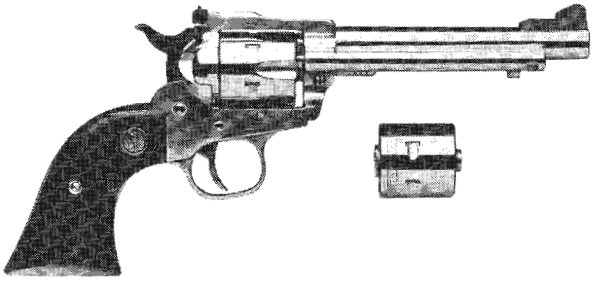
manufactured from 1954 to 1962 only. For the optional grips the premium is: Ivory $800, Stag $400.

NEW MODEL SERIES

The Ruger firm has always demonstrated keen perception and in 1973 completely modified their single-action lockwork to accommodate a hammer block or transfer bar. This hammer block or transfer bar prevented accidental discharge should a revolver be dropped. In doing so, the company circumvented a great deal of potential legal problems and made collectibles out of the previous models. There are many individuals who simply do not care for the "New Models," as they are called, and will not purchase them; but judging from the continued success and growth of the Ruger company, those individuals must be the exception, not the rule.

Super Single Six Convertible (New Model)

This model is similar in appearance to the old model but has the new hammer block safety system. The frame has two pins instead of three screws, and opening the loading gate frees the cylinder stop for loading. Barrel lengths are 4-5/8", 5.5", 6.5", and 9.5". The sights are adjustable; the finish is blued. The grips are walnut with a medallion, and an interchangeable .22 Magnum cylinder is supplied. This model was introduced in 1973 and is currently in production.



NIB	Exc.	V.G.	Good	Fair	Poor
315	275	200	125	100	80

Stainless Steel Single Six Convertible

The same as the standard blued model but made from stainless steel. Offered with a 4-5/8", 6-1/2", and 9-1/2" barrel.

NIB	Exc.	V.G.	Good	Fair	Poor
395	300	200	175	125	100

NOTE: Pre-warning pistols (1973-1976) with 4-5/8" or 9-1/2" barrel will bring an additional 40 percent premium. Pistols with 4-5/8" barrels with "made in the 200th year of American Liberty" rollmark on the barrel will bring at least 100 percent premium to the NIB prices.

New Model Single Six (.22 LR only) "Star" Model

This model was produced in blue and stainless for one year only in 4-5/8", 5-1/2", 6-1/2", and 9-1/2" barrel lengths. Very low production on this model.

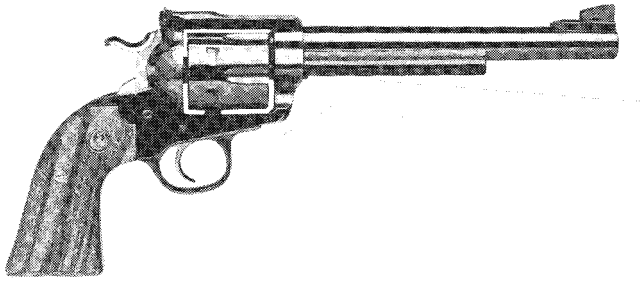
Bisley Model

This model has the modified features found on the famous old Colt Bisley Target model—the flat top frame, fixed or adjustable sights, and the longer grip frame that has become the Bisley trademark. The Bisley is available chambered for .22 LR, .32 H&R Magnum, .357 Magnum, .41 Magnum, .44 Magnum, and .45 Long Colt. The barrel lengths are 6.5" and 7.5"; cylinders are either fluted or unfluted and roll engraved. The finish is a satin blue, and the grips are smooth Goncalo Alves with medallions. The Bisley was introduced in 1986.

.22 LR and .32 H&R Magnum



NIB	Exc.	V.G.	Good	Fair	Poor
425	375	225	200	150	125

NOTE: Add $100 for .32 Magnum Bisley.

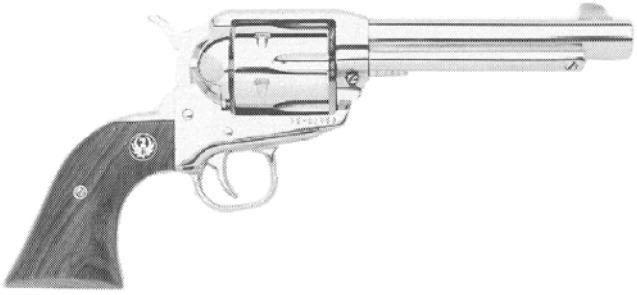
Ruger Vaquero

This single-action pistol was introduced in 1993 and was voted handgun of the year by the shooting industry. It is a fixed sight version of the New Model Blackhawk. It is available in stainless steel or blued with case-colored frame. Offered in three different barrel lengths: 4.62", 5.5", and 7.5". Chambered for the .45 Long Colt. In 1994 the .44-40 and .44 Magnum calibers were added to the Vaquero line. Capacity is 6 rounds. Weighs between 39 and 41 oz. depending on barrel length. Discontinued.



NIB	Exc.	V.G.	Good	Fair	Poor
475	400	300	200	150	100

NOTE: Vaqueros with 4-5/8" barrel chambered for .44 Magnum in both blue and stainless are uncatalogued, add 25 percent.

Ruger Bisley Vaquero

Introduced in 1997 this model features a 5.5" barrel chambered for .44 Magnum or .45 Long Colt. Grips are smooth rosewood. Finish is blued with case colored frame. Blade front sight and notch rear. Weight is about 40 oz. Discontinued.

DOUBLE-ACTION REVOLVERS

Security Six

This revolver, also known as the Model 117, is chambered for the .357 Magnum cartridge and has a 2.75", 4", or 6" barrel. It features adjustable sights and a square butt, with checkered walnut grips. It was manufactured between 1970 and 1985. Early guns with fixed sights and square butt were also marked "Security-Six". The model was later termed "Service-Six" and was so marked. The prices listed are only for the adjustable sight and square butt "Security-Six" models. Round butt Security-Sixes with adjustable are worth a premium.

Exc.	V.G.	Good	Fair	Poor
395	295	200	150	100

NOTE: Fixed sight guns marked Security-Six and round butt Security-Sixes with adjustable sights are worth a premium.

Stainless Steel Model 717

This model is the Security-Six made from stainless steel.

375	250	225	175	125

GP-100

This model is chambered for the .357 Magnum/.38 Special. It is available with fixed or adjustable sights in barrel lengths of 3", 4", or 6" barrel and has a frame designed for constant use of heavy magnum loads. The rear sight has a white outline, and the front sight features interchangeable colored inserts. The finish is blued, and the grips are a new design made of rubber with smooth Goncalo Alves inserts. This model was introduced in 1986. Discontinued.

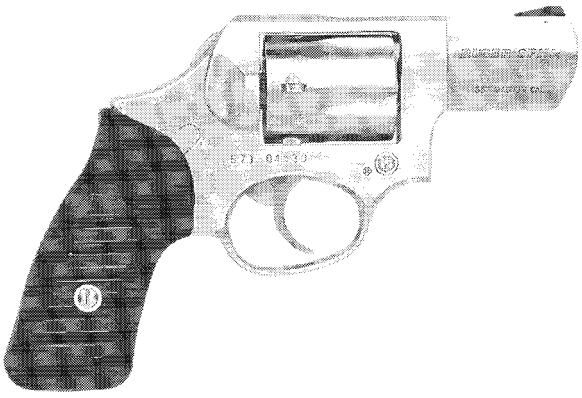
525	425	300	200	150	125

SP-101 Spurless-Hammer

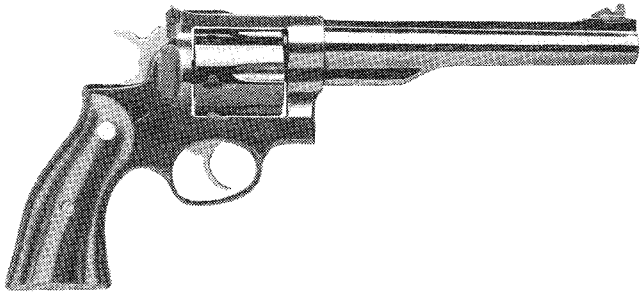
This model was introduced in 1993 and features an SP-101 without an exposed hammer spur. Available in two calibers: .38 Special and .357 Magnum with 2-1/4" barrel. This double-action revolver has fixed sights, holds 5 rounds and weighs about 26 oz.



NIB	Exc.	V.G.	Good	Fair	Poor
515	375	300	250	200	150

Redhawk

This model is a large-frame, double-action revolver which was chambered for the .357 and .41 Magnums until 1992, and currently for the .44 Magnum cartridges. The barrel lengths are 5-1/2" and 7-1/2". The finish is blued, and the grips are smooth walnut. The Redhawk was introduced in 1979. Add 25 percent for .357 and .41.



NIB	Exc.	V.G.	Good	Fair	Poor
550	475	350	250	200	150

Redhawk Stainless Steel

The same as the blued version except constructed of stainless steel. It was chambered for .357 Magnum until 1985, the .41 Magnum until 1992, and currently for the .44 Magnum. In 1998 this model was offered chambered for .45 Long Colt cartridge in barrel lengths of 4", 5.5" and 7.5". Add 15 percent for .357 and .41.

NIB	Exc.	V.G.	Good	Fair	Poor
575	500	400	275	200	150

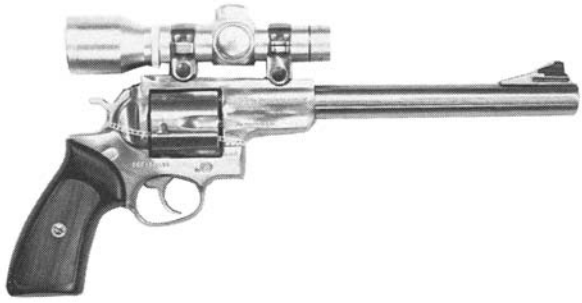
Redhawk 4-Inch .45 Colt (2008)

Similar to original stainless Redhawk but in .45 Colt only and with a 4-inch barrel. Hogue molded grips.

NIB	Exc.	V.G.	Good	Fair	Poor
625	—	—	—	—	—

Super Redhawk

This is a more massive version of the Redhawk. It weighs 53 oz. and is offered with a 7.5" or 9.5" barrel. It is made of stainless steel, and the barrel rib is milled to accept the Ruger scope-ring system. The grips are the combination rubber and Goncalo Alves-type found on the GP-100. This revolver was introduced in 1987. In 1999 this model was offered chambered for the .454 Casull cartridge with 7.5" or 9.5" barrel. In 2001 this model was offered in .480 Ruger caliber in 7.5" or 9.5" barrel.



NIB	Exc.	V.G.	Good	Fair	Poor
740	550	400	275	200	150

NOTE: Add $200 for .454 Casull or .480 Ruger caliber. Revolvers chambered for the .454 Casull also accept .45 Long Colt cartridges.

Super Redhawk Alaskan

This revolver is chambered for the .454 Casull and the .45 Colt interchangeable or the .480 Ruger cartridge. Barrel length is 2.5" with adjustable rear sight. Cylinder capacity is 6 rounds. Stainless steel finish. Hogue Tamer rubber grips. Weight is about 42 oz. Introduced in 2005. .44 Magnum chambering added 2007.

NIB	Exc.	V.G.	Good	Fair	Poor
750	600	—	—	—	—

Police Service-Six

This model is also known as the Model 107, chambered for .357 Magnum; the Model 108, chambered for the .38 Special; and the 109, chambered for the 9mm. The barrel is 2.75" or 4". A few 6" barrel Service-Sixes were also produced and these are worth a premium. It has fixed sights and a square butt, with checkered walnut grips. The finish is blued. The 9mm was discontinued in 1984; the other two calibers, in 1988. Add 30 percent for 9mm.

Exc.	V.G.	Good	Fair	Poor
375	300	200	150	100

Model 707 and 708

This is the designation for the stainless versions of the Police Service-Six. It was not produced in 9mm, and only the 4" barrel was offered. This model was discontinued in 1988.

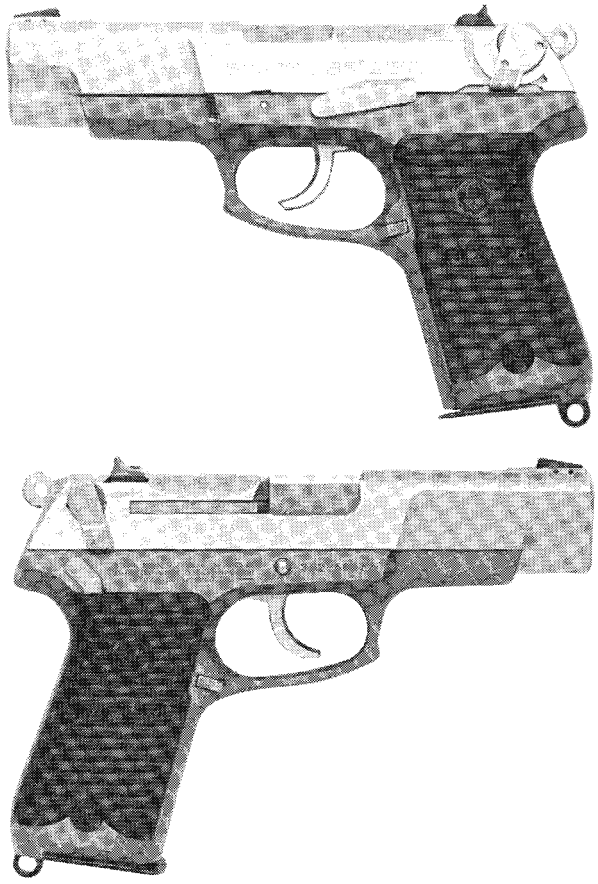
300	250	225	175	125

This symbol denotes "Sleepers" with rapidly-rising values and/or significant collector potential.

SEMI-AUTOMATIC HANDGUNS

P-85 or P-89

This model represents Ruger's entry into the wonder-nine market. The P-85 is a double-action, high-capacity (15-shot detachable magazine) semi-automatic, with an alloy frame and steel slide. It has a 4.5" barrel, ambidextrous safety, and three-dot sighting system. It has a matte black finish and black synthetic grips. The latest option for this model is a decocking device to replace the standard safety. There is also an optional molded locking case and extra magazine with loading tool available. It is more reasonably priced than many of its competitors. This pistol was introduced in 1987 and was sold at large premium for some time due to limited supply and great demand. As of this writing, Ruger is producing this pistol in a new plant in Prescott, Arizona; and the premium situation no longer exists. This model is also produced in a 9x21 cartridge for non-NATO countries. In 1991 the internal mechanism was changed slightly with the result that a name change occurred "P85 Mark II".



NIB	Exc.	V.G.	Good	Fair	Poor
360	300	275	250	200	150

P85 Stainless Steel

This model is the same as the matte black version except that the receiver assembly is made of stainless steel.

10/22RPFCARH (Lipsey's Distributor's Special)

Similar to 10/22 but covered throughout with RealTree Hardwoods HD camo finish. Introduced 2008. Pricing not available.

K10/22-USST "Barracuda" (Distributor Exclusive)

Wow! A funkalicious 10/22 with red/whit/blue laminated thumbhole stock and other goodies. Introduced 2008. Pricing not available. (Note: Compare styling to that of Remington Model 592 Yellow Jacket.)

Model 10/17

Introduced in 2004 this model is chambered for the .17 HMR cartridge. Fitted with a 20" barrel. Magazine capacity is 9 rounds. Weight is about 6.5 lbs. Discontinued.

NIB	*Exc.*	*V.G.*	*Good*	*Fair*	*Poor*
600	500	—	—	—	—

Model 44 Carbine

This model is a short, 18.5" barreled, gas-operated carbine chambered for the .44 Magnum cartridge. It has a 4-shot, non-detachable magazine, a folding rear sight, and a plain walnut stock. This is a handy deer hunting carbine manufactured between 1961 and 1985.

700	525	400	275	200	150

Mini-14

This is a paramilitary-style carbine chambered for the .223 Remington and on a limited basis for the .222 cartridge. It has an 18.5" barrel and is gas-operated. The detachable magazines originally offered held 5, 10, or 20 rounds. The high-capacity magazines are now discontinued, and prices of them are what the market will bear. The Mini-14 has a military-style stock and aperture sight. It was introduced in 1975.

810	600	450	300	200	150

NRA Mini-14

Ruger NRA Mini-14 Rifle with two 20-round magazines, gold-tone medallion in grip cap, and special serial number sequence (NRA8XXXXX). Produced in 2008 only. Also available with 5-round magazines.

NIB	Exc	V.G.	Good	Fair	Poor
1000	—	—	—	—	—

Mini-30

This model was brought out by Ruger in 1987 in answer to the influx of weapons imported from China that were chambered for this cartridge—the 7.62mmx39 Russian. This cartridge is touted as a fine hunting cartridge for deer-sized game; and by adding this chambering, the handy Mini-14 becomes a legitimate hunting gun—and a new market opened. This model is similar in appearance to the standard Mini-14 and is supplied with Ruger scope rings. 6.8mm chambering added 2007.

GB Model

This model has a factory-installed folding stock, flash suppressor, and bayonet lug. It was designed and sold by Ruger to law enforcement agencies. A number have come on the civilian market through surplus sales and police trade-ins. With the assault rifle hysteria, prices of this model have fluctuated wildly in some areas. Now that Ruger has discontinued the folding stock and the high-capacity magazines, this could become even less predictable. Note that this is a semi-automatic and totally different than the full-auto version of this weapon available only through Class 3 dealers.

Exc.	V.G.	Good	Fair	Poor
1100	800	650	400	300

Ruger PC4/PC9 Carbine

This is a semi-automatic carbine chambered for the 9mm (PC9) or .40 S&W (PC4) cartridges. It is fitted with a 16.25" barrel and black synthetic stock. Post front sight with adjustable rear sight. A receiver is also offered. Detachable magazine has 10-round capacity. Weight is approximately 6.4 lbs. Introduced in 1998. Discontinued.

NIB	Exc.	V.G.	Good	Fair	Poor
625	450	325	225	150	100

NOTE: Add $30 for receiver sight.

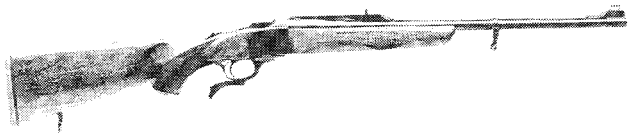
SINGLE-SHOT RIFLES

All Ruger single-shot rifles feature a sliding shotgun-type safety, that engage both the sear and the hammer, all metal parts are polished and blued, each receiver and stock is hand fitted, and the stock is American walnut with a satin finish. The pistol grip and forearm are hand checkered with 20 lines to the inch. Those No. 1 rifles offered with open sights are fitted with an adjustable folding leaf rear sight set into a quarter rib on the barrel and a dovetail-type gold bead front sight. All quarter ribs are machined to accommodate Ruger steel scope rings.

NOTE: There are many rare nonprefixed No. 1 rifles. Unique examples should be individually appraised. "Writers Club" 1 of 21 rifles that are engraved will bring $3000 to $5000 depending on the amount of engraving and gold inlay, caliber, and the person that it was presented to.

Ruger No. 1 Light Sporter (1-A)

This model features open sights, barrel band on lightweight barrel, and Alexander Henry-style forearm. Offered with a 22" barrel in four calibers. Rifle weighs 7.25 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
965	725	550	375	250	200

Ruger Number 1 Light Standard (1-AB)

Similar to Light Sporter 1-A but with 22-inch sightless blued barrel. Cambered in .204 Ruger only; introduced 2006. MSRP: $1000.

Ruger No. 1 Standard (1-B)

This model is furnished with no sights, medium barrel, semi-beavertail forearm, and quarter rib with 1" Ruger scope rings. Weighs 8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
965	725	550	375	250	200

Ruger No. 1 Standard Stainless (1-B-BBZ)

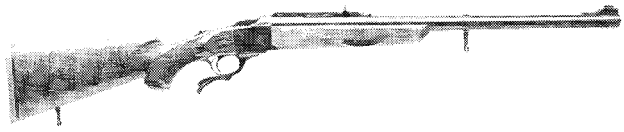
Introduced in 2000 this model features a laminated wood stock. It is chambered for the .243 Win., .25-06, 7mm Mag., 7mm STW, .30-06, .300 Win. Mag. Fitted with a 26" barrel. Weight is approximately 8 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
995	750	550	375	250	200

Ruger No. 1 Tropical (1-H)

Fitted with open sights this model has a barrel band on a heavy barrel with Alexander Henry-style forearm. Rifle weighs 9 lbs.

NOTE: In 2001 this model was also offered with stainless steel finish and black laminated stock in .375 H&H. In 2003 the .458 Lott and .405 Win. cartridges were added to this model. In 2008 the ..450/.400 Nitro Express was added.



NIB	Exc.	V.G.	Good	Fair	Poor
965	725	550	375	250	200

NOTE: A few 24" heavy barrel 1-H rifles were chambered for the .45-70 Government cartridge up to 1976. These bring a substantial premium and should be appraised individually. The recently catalogued .404 Jeffery has been discontinued. Only a few of these rifles were produced. Add 100 percent for .404 Jeffery caliber.

Ruger No. 1 International (1-RSI)

This No. 1 rifle features a lightweight barrel with full length forearm, open sights. Rifle weighs 7.25 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
995	750	550	375	250	200

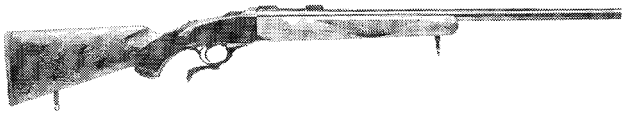
Ruger No. 1 Medium Sporter (1-S)

The Medium Sporter is equipped with open sights, a barrel band on a medium weight barrel, and Alexander Henry-style forearm. Rifle weighs 8 lbs. In 2001 this model was also offered in stainless steel and black laminated stock in .45-70 caliber.

NIB	Exc.	V.G.	Good	Fair	Poor
965	725	550	375	250	200

Ruger No. 1 Special Varminter (1-V)

This model is furnished with no sights, a heavy barrel, target scope blocks with 1" Ruger scope rings, and semi-beavertail forearm. Rifle weighs about 9 lbs.



NIB	Exc.	V.G.	Good	Fair	Poor
965	725	550	375	250	200

Ruger No. 1 Stainless Varminter (1-V-BBZ)

Introduced in 2000 this model features a laminated wood stock and stainless steel finish. Chambered for .22-250 and fitted with a 24" barrel. Weight is approximately 9 lbs.

NIB	Exc.	V.G.	Good	Fair	Poor
995	750	550	375	250	200

Number 3 Carbine

This model is a less elaborate, inexpensive version of the Number 1. The action is the same except that the lever is less ornate in appearance and lacks the locking bar. The unchecked stock is of a military carbine style with a barrel band. It is similar in appearance to the Model 44 and the 10/22. This serviceable rifle was chambered for the .45-70 when it was released in 1972. Later chamberings added the .22 Hornet, .30-40 Krag, .223, .44 Magnum, and the .375 Winchester. The barrel is 22" long, and there is a folding rear sight. This model was discontinued in 1987. Add 10 percent for .30-40 Krag.

Exc.	V.G.	Good	Fair	Poor
625	500	300	200	125

BOLT-ACTION RIFLES

Ruger introduced the Model 77R in 1968. It filled the need for a good quality, reasonably priced, bolt-action hunting rifle. It has been a commercial success. There are certain variations of this rifle that collectors actively seek. One should avail oneself of the specialized literature on this model and secure individual appraisals on the rare variations as the differences are slight and beyond the scope of this book.

Model 77-R/RS
